G/C Ada v. alp

A NEW MEDICAL DICTIONARY.

In one volume, large 12mo., now ready, at a low price.

A DICTIONARY

OF

TERMS USED IN MEDICINE

THE COLLATERAL SCIENCES;

 $\mathbf{B}\mathbf{Y}$

RICHARD D. HOBLYN, A.M., OXON.

FIRST AMERICAN, FROM THE SECOND LONDON EDITION.

REVISED, WITH NUMEROUS ADDITIONS,

BY ISAAC HAYS, M.D.,

EDITOR OF THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES.

OPINIONS OF THE PRESS.

"We hardly remember to have seen so much valuable matter condensed it such a small compass as this little volume presents. The first edition was published in 1835, and the present may be said to be almost rewritten, introducing the most recent terms on each subject. The Etymology, Greek, Latin, &c., is carefully attended to, and the explanations are clear and precise.

"We cannot too strongly recommend this small and cheap volume to the library of every student and every practitioner."—Medico-Chirurgical Review.

The we gave a very favourable account of this little book on its first appearance, and we have only to repeat the praise with increased emphasis. It is, for its size, decidedly the best book of the kind, and ought to be in the possession of every student. Its plan is sufficiently comprehensive, and it contains an immense mass of necessary information in a very small cumpass."—British and Foreign Medical Review.

[&]quot;A work much wanted, and very ably executed." - London Medical Journal,

[&]quot;This compendious volume is well adapted for the use of students. It contains a complete glossary of the terms used in medicine,—not only those in common use, but also the more recent and less familiar names interduced by modern writers. The introduction of tabular views of different subjects is at once comprehensive and satisfactory."—Medical Gazette.

[&]quot;Concise and ingenious." - Johnson's Medico-Chirur. Journal.

[&]quot;It is a very learned, pains-taking, complete, and useful work,—a Dictionary absolutely necessary in a medical library."—Spectator.

RICHARD D. HOBLYN, A.M. Oxon.

FIRST AMERICAN, FROM THE SECOND LONDON, EDITION.

REVISED, WITH NUMEROUS ADDITIONS,

BY ISAAC HAYS, M.D.,

EDITOR OF THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES.

PHILADELPHIA:
LEA & BLANCHARD.
1845.

Entered, according to the Act of Congress, in the year 1845,

By Lea & Blanchard,

he Clark's Office of the District Court for the Forter District

In the Clerk's Office of the District Court for the Eastern District of Pennsylvania.

C. SHERMAN, PRINTER, 19 St. James Street.

MARSHALL HALL, M.D. F.R.S., &c.

THIS LITTLE WORK,

UNDERTAKEN AT HIS SUGGESTION,

AND

PROMOTED BY HIS ASSISTANCE,

IS INSCRIBED BY

THE AUTHOR.

EDITOR'S PREFACE.

THE object of this work is to present to the Student, in a concise form, an explanation of the terms most used in Medicine, and the Sciences connected with it, by giving their etymology and signification. This design the author has so ably executed as to have elicited the highest encomiums of the Medical Press.

Believing that its republication in this country would be useful, the Editor consented to revise and adapt it to the wants of the American practitioner. With this view he has added the native medicinal plants,—the formula for the officinal preparations, &c,—and made the work conform with the Pharmacopæia of the United States.

For the greater convenience of reference, he has also introduced into the body of the work most of the interesting articles placed by the author in an *Appendix*.

The Editor has availed himself of many sources of information in preparing his additions, to which he need not specially refer, but he must not omit to acknowledge his indebtedness to the admirable United States Dispensatory of Professors Wood and Bache, of which he has made much use, particularly in relation to the vegetable Materia Medica of the United States.

The Editor's additions are enclosed within brackets.

Philadelphia, September, 1845.

AUTHOR'S PREFACE.

In preparing this edition of the Dictionary of Medical Terms, the Author has endeavoured to render the work as complete as possible, by an entire revision and correction of the former edition, and by the introduction of the most recent terms on each subject of which it purports to treat. The work may, indeed, be said to have been almost rewritten.

An Appendix has been added, in which several important subjects have been treated at greater length than was compatible with their insertion into the body of the work. These subjects, some of which are arranged in a tabular form, afford matter for study, as well as for occasional reference, to the medical student.

2, Sussex Place, Regent's Park, October 1, 1844.

DICTIONARY

OF

MEDICAL TERMS.

ABE

A (a). In words of Greek derivation this letter is employed, as a prefix, in a privative sense, as in a-cephalous, headless, a-phonia, voicelessness.

A A (contracted from dvà), 'of each;' an expression used in prescriptions, to denote that an equal quantity of two or more substances is to be employed.

 $A A \overline{A}$. A chemical abbreviation for

amalgama, amalgamate.

[ABANGA. The name given by the inhabitants of the Island of St. Thomas to the eatable fruit of a palm tree which they term Ady. This fruit contains a stone, the kernel of which is much esteemed by the islanders in diseases of the Three or four are given three or four times a day.]

ABAPTISTON (a, priv., βαπτίζω, to plunge). The perforating part of the trephine, which had formerly the figure of a truncated cone, to prevent its sudden

plunging into the brain.

[ABBREVIATION (brevis, short). The contraction of a word or passage, made by dropping some of the letters, or by substituting certain marks or characters in their place. Abbreviations are used principally either for celerity or secrecy; and were probably resorted to for both purposes by the older physicians, who made copious use of them. They are chiefly used in prescriptions, under which head a list of them is given. See Prescription.]

ABDO'MEN (abdo, to hide; or abdo and omentum). The belly, or the cavity situated between the thorax and the pelvis; so called from its containing the in- adductor.

testines, &c.

ABDOMINAL REGIONS. The abdomen is distinguished into three transverse zones,-an upper, a middle, and a lower. Each zone is divided, by perpendicular lines, into three compartments or regions; a middle, and two lateral. They are thus named :-

 Epigastric Region. The middle region of the upper zone, immediately over the small end of the stomach. The two lateral regions of this zone, situated under the cartilages of the ribs, are called the hypochondriac.

Umbilical Region. The middle region of the middle zone, immediately over the umbilicus. The two lateral regions of this zone, situated over the loins. are called the lumbar.

3. Hypogastric Region. The middle region of the lowest zone, situated below the stomach. The two lateral regions of this zone, situated over the ilia, are called

the iliac.

4. Inguinal Region. By this term is denoted the vicinity of Poupart's ligament. [ABDOMINAL (abdomen, the belly) belonging to the abdomen.]

 $\overline{ABDOMINA'}$ LES (abdomen, the belly). An order of Fishes which have fins placed on the abdomen, as the salmon, the trout,

ABDUCTOR (abduco, to draw from). Abducent. A muscle whose office is to draw one part of the body away from another. Thus, the rectus externus is called abductor oculi, from the action of this muscle in drawing the eye away from the nose. Its antagonist is called

ABELMOSCHUS (an Arabic term, sig-

nifying musked seeds). Grana moschata; employed to denote any thing that is withthe musky seeds of a species of Hibiscus, out rule or order. The terms are nearly A powder, called poudre de Chypre is pre-synonymous. pared from these seeds in the East, for

flavouring coffee.

ABERRATION (aberro, to wander Ruminantia. A deviation from the natural state, calves and lambs that rennet is formed. as applied to the mind. Also, a deviation of the rays of light from the true focus before the time). Miscarriage; the preof reflection or refraction, in certain mature expulsion of the fœtus from the lenses

ABIES (abeo, quod in cœlum longè order Coniferæ, abounding in resin.

- Resin of the 1. Abietis resina. L. Spruce Fir; formerly called thus or frankincense; a spontaneous exudation from external organs of respiration, but respire
- [q. v.]

3. Pix liquida. Tar. [q. v.]

4. Pix nigra. Black pitch. [q. v.]

ter, having a sharp empyreumatic taste.

6. Abietic acid. An acid lately dis-faces of bodies. covered in the resin of trees of the genus Abies. The old preparation, termed aci-Wild Liquorice, a leguminous plant. Its dum abietis, is the peculiar acid liquor, polished and parti-coloured seeds, called yielded along with the essential oil, in jumble beads, were formerly employed for distillation of the fresh branches or fruit rosaries, necklaces, &c. of some species of Abies.

irritatio, irritation). Literally, absence of a collection of pus formed or deposited in irritation. This term was used by Broussais some tissue or organ. It is so named from and his school to denote a diminution of the separation of the sides of the cavity

sues.

give suck). This term denotes the cessation point. of the period of suckling, as regards the [ABSCISSION (abscidere, to cut off). The

tic-tac of a watch placed under a pillow 2. Axungia articularis. Unguen artiupon which the head rests. It occurs culare. Names of the peculiar fluid at the middle of the period of gesta- which favours the motions of the joints, and which is commonly called synovia.

3. Axungia Castoris. Pinguedo Casto-

An acid obtained closely resembles suberic acid. Another [AUTOPHONIA (av75), self, $\phi\omega\nu\eta$, acid, the azoleic, is procured by the same roice). An auscultatory process, which process. The terms are derived from the

AZOERYTHRIN. A colouring prin-

AZOLITMIN. A pure colouring material, of a deep blood-red colour, obtained

AZOTE (a, priv., ζωή, life). A constituent part of the atmosphere, so called Oats; the fruit from its being incapable, alone, of supnitric acid. It exists only in combina-coloured with oxide of cobalt, and ground tion.

AZOTOUS ACID. Another name for

AZULMIC ACID. The name given changeable blue colour ultramarine is by Boullay to the black matter deposited prepared. during the decomposition of prussic acid;

AZOTIC ACID. Another name for monly called smalt, consisting of a glass to an impalpable powder,

AZURE STONE. Lapis Lazuli. An nitrous acid, or the hyponitrous of Turner, azure blue mineral, from which the un-

AZYGOS (a, priv., ζυγδς, a yoke). it is very similar to ulmic acid. See term applied to parts which are single, and not in pairs, as to a process of the AZURE. A fine blue pigment, com-sphenoid bone, and a vein of the thorax.

raria: it is brought from the East Indies, under the name of neb-neb; and is employed as a dye-stuff.

BACCA. A berry; an inferior, indehiscent, pulpy fruit, as the gooseberry. The term is often otherwise applied by

botanists.

[BACCATE (bacca, a berry). Berried. It also in Botany signifies having a juicy,

succulent consistence.]

BACCHIA (bacchus, wine). Gutta rosacea. The name given by Linnaus to a pimpled or brandy face.—the kind

of face that Bacchus rejoiced in.

of hellebore, and myrrh, of each, 3j., with Ziij, of powdered carduus benedictus, to be divided into pills of one grain each; from two to six to be given three farriery, corresponding to the term botimes every day, according to the effects lus; it is generally that of a cylinder of they produce.

BACULUS. Literally, a stick; and hence the term has been applied to a lozenge, shaped into a little short roll.

BAKER'S ITCH. Psoriasis pistoria. The vulgar name of a species of scall, occurring on the back of the hand,

BAKERS' SALT. the sub-carbonate of ammonia, or smelling salts, from its being used by bakers, as a substitute for yeast, in the manufacture of some of the finer kinds of bread.

BALANCE ELECTROMETER. An instrument constructed on the applicato estimate the mutual attraction of op-affections positely-electrified surfaces.

BALAUSTA (βαλαύστιον). A name

BALBAH. The rind or shell which applied to the many-celled, many-seeded, surrounds the fruit of the Mimosa cine-inferior, indehiscent fruit of the pome-

granate.

BALBUTIES (βαβάζω, to babble). Stammering. In pure Latin, balbus denotes one who lisps, or is incapable of pronouncing certain letters; blasus, one who stammers, or has an impediment in his speech.

BALDWIN'S PHOSPHORUS. The ignited nitrate of lime. This salt is so termed from its property of emitting a beautiful white light in the dark, when kept in a stoppered vial, and exposed for some time to the rays of the sun.

BALISTA (βάλλω, to east). A sling. BACHER'S TONIC PILLS. Extract The astragalus was formerly called on balistæ, from its being east by the an-

cients from their slings.

BALL, A form of medicine used in two or three inches in length.

BALL AND SOCKET, Enarthrosis. A species of movable articulation, as that

of the hip. See Articulation.

BALLISMUS (βαλλίζω, to trip or caper). A term which has been generally applied to those forms of palsy which A name given to are attended with fits of leaping or running.

BALLOON. A chemical instrument or receiver, of a spherical form, for con-

densing vapours from retorts.

BALLOTA LANATA. A plant indigenous in Siberia, and much recomtion of the common balance and weights, mended by Brera in rheumatic and gouty

BALLOTTEMENT (French). BALANITIS (βάλανος, glans). Inflam-repercussion or falling back of the fœtus, mation of the mucous membrane of the after being raised by an impulse of the glans penis, and inner layer of the pre- finger or hand, and so made to float in the liquor amnii,

BALM TEA. An infusion of the

leaves of the Melissa efficinalis, or Com-the proportion of proof spirit, or brandy; mon Balm.

for the Mecca Balsam. See Balsam.

BALSAM. A technical term used to express a native compound of ethereal or consists principally of paregoric elixir, essential oils with resin and Benzoic acid, very strongly impregnated with the oil Those compounds which have no Ben- of aniseed.] zoic acid are miscalled balsams, being in fact true turpentines.

I. Balsams with Benzoic Acid.

1. Balsam of Liquidambar. Balsam referring to the article Balsam. which flows from incisions made into the trunk of the Liquidambar styraciflua, nerally applied to substances of a smooth It dries up readily, and thus occurs in and oily consistence, possessing emolthe solid form.

BOUGIE. Literally, a wax taper. Bougies are cylindrical instruments, ge-1. Liquid Camphor; Camphor oil. A nerally made of slips of linen, spread liquid obtained by making deep incisions with plaster, and rolled up with the plaster side outermost, on a hot glazed to the Dryobalanops aromatica.

plaster side outermost, on a hot glazed tile, and shaped. These instruments are gus, &c., for the purpose of dilating them. nervous system, occupying the whole

same way, by melting in one vessel four This substance is not homogeneous ounces of litharge plaster, and in another throughout, but presents two distinct three drachms of olive oil, and an ounce modifications, viz.and a half of yellow wax, mixing them for use.

2. Plenck's Bougies are made of catgut, and, and may swell after being introduced.

3. Elastic gum Bougies are not made the mass contained within the former. of caoutchouc, but prepared by boiling linseed oil for a long time over a slow fire, and with this varnishing cotton, silk, or linen, employed as a basis,

4. Smuth's flexible metallic Bougies are

liable to break, and are dangerous. 5. Daran's medicated Bougies are made

of materials which dissolve in the urethra; of this class are the armed bougies, which are prepared with potassa fusa, or nitrate of silver.

BOURDONNEMENT. given by the French to the several varieties of imaginary sounds, termed-

Syrigmus, or ringing in the ears.

Susurrus, or whizzing sounds.

Bombus, or beating sounds.

BOVI'NA FAMES (bos, an ox, fames, hunger). Bulimia. Voracious appetite. Furning Liquor.

BRACHERIUM (brachiale, a bracelet).

truss, or bandage, for hernia.

[BRACHIATE (βραγιων, an arm). Applied in botany to branches Armed. which diverge nearly at right angles from the stem.1

BRACHIUM (βραγίων, an arm). The arm; the part from the shoulder to the elbow. The part from the elbow to the wrist is termed *lacertus*. Thus, 'subjuncta lacertis brachia.' Ovid.

Brachio-poda (ποῆς, ποδός, a foot). Arm-

valves.

BRACTEA. A Latin term, denoting a thin leaf or plate of any metal. It is ap-carpus incisa, a tree of the order Urticaplied, in botany, to all those modifications $ce\alpha$, the fruit of which is, to the inhabiof leaves which are found upon the inflo-lants of Polynesia, what corn is to the rescence, and are situated between the inhabitants of other parts of the world. true leaves and the calvx of the flower. They compose the involucrum of Compositancl. sitæ, the glumes of Gramineæ, the spathe of the infant, where the frontal and the of the Arum. &c.

slow, σπέρμα, semen). Seminal mis-emission, in which the discharge is retarded

from organic weakness.

of the urethra, the rectum, the esopha-plargest portion of the central part of the 1. B. Bell's Bougies are made in the upper part of the cavity of the cranium.

> I. A cortical, cincritious, or gray substance, which covers the brain in general;

2. A medullary or white substance, or

BRAN. Furfur tritici. The husk of ground wheat.

BRANCA (Spanish for a foot or branch). A term applied to some herbs supposed to resemble a particular foot, as brankursine, or branca ursina, the name of the Heracleum sphondylium.

BRANCHÍA (βράγχια, gills). Gills; filamentous organs for breathing

water.

Branchio-poda (ποΰς, ποδός, a foot). Gill-The name footed animals; animals which have gills instead of feet, as the monoculus.

BRANDY, Eau de Vie, The spirit distilled from wine. See Spirit.

BRANKS. The vernacular name in Scotland for parotitis, or the mumps.

BRASQUĖ. A term used by the French metallurgists to denote the lining BOYLE'S FUMING LIQUOR. See of a crucible or a furnace with charcoal.

BRASS. Æs. æris. An alloy of cop-A term used by some Latin writers for a per and zinc. Common brass consists of three parts of copper and one of zinc. See Similor.

BRASSICA RUBRA. The Red Cabbage; employed by chemists as an excellent test for acids and alkalies,

BRAZIL NUTS. Chestnuts of Brazil. The nuts of the Bertholletia excelsa.

BRAZIL WOOD. The wood of the Casalpinia Braziliensis, which yields a red colouring matter used by dyers.

BRAZILETTO. An inferior species footed animals; animals which have of Brazil wood, brought from Jamaica, arms instead of fect; they are all bi-It is one of the cheapest and least esteemed of the red dye-woods.

BREAD-FRUIT TREE. The Arto-

BREGMA ($\beta \rho \dot{\epsilon} \chi \omega$, to moisten). The two spaces left in the head occipital bones respectively join the pa-BRADY-SPERMATISMUS (Beaches, rietal. It is distinguished as anterior and posterior. See Cranium.

BRESLAW FEVER. An epidemic which broke out in the Prussian army at BRAIN. Encephalon. Cerebrum. The Breslaw, in the middle of the last century, and which has been named by Sauvages cophagus, and the fluids by the brontritaophia Vratislaviensis.

BREVISSIMUS OCULI (superl. of 1. muscle of the eye.

local tetter, or impetigo, produced on the cative catarrh. hands of bricklayers by the contact of See Grocers' Itch.

ring which parts the cavity of the pelvis

BRIMSTONE. A name for sulphur, Derby-neck. [q. v.]

BRITISH GUM. A term applied to cently proposed by Andral to designate starch when reduced to a gum-like state the exhalation of blood from the lining by exposure to great heat. It then becomes of a brown colour, and in that monthly called bronchial hæmorrhage. See state is employed by calico printers.

BRITISH OIL. Camphor one ounce, rectified spirits of wine four ounces, sweet resonance of the voice over the bronchi. oil twelve ounces, and oil of hartshorn

five ounces, boiled together.

This name is also given to the Oleum petræ vulgare, or common oil of petre; 10 per cent, of tin, and other metals, used a variety of petroleum.

BRODIUM. A term synonymous, in brodium salis, a decoction of salt.

BROMA (βρώσκω, to eat). Food; any

thing that is masticated.

description, or treatise on food.

BROMAL. A colourless oily liquid,

cooled by ice.

BROMINE (βρῶμος, a stench). A deep red-coloured fetid liquid, formerly called the bark and seeds of nux vomica, and weeds, and of those of the Janthina vio-lacea, and other animals. It combines with oxygen, and forms bromic acid; French, applied to various sounds heard and with hydrogen, forming the hydro-on ausculiation and percussion.

BROMURET. A combination of the BRUNNER omic acid with inding please.

phur, &c.

1. Bronchial tubes. The minute ramibrevis, short). A synonym of the obli-fications of the bronchi, terminating in quus inferior, from its being the shortest the bronchial cells, or air cells, of the

lungs.

BREZILIN. The name applied by 2. Bronch-itis. Inflammation of the Chevreul to the colouring matter of Bra-bronchi, or ramifications of the trachea. bronchial inflammation, inflammatory ca-BRICKLAYERS' ITCH. A species of tarrh, bastard peripneumony, and suffo-

CONFLATION (conflo, to blow toge-

ther). Running together. It is applied [7. C. Piperis Nigri. Dub. Confection to the exanthemata when the pustules

by the agency of cold.

[8. C. Rosæ, Ph. U.S. Conserve of roses.] CONGENER (con, and genus, kind). Red roses in powder, Giv.; rose water, A thing of the same kind or nature. at a boiling heat, f3viij.; rub together, Hence the term congenerous is applied

Chiefly used as a vehicle for other medi- to diseases or peculiarities of conforma-

tion existing at birth.]

CONGESTION (congero, to amass).

CONGIUS. This measure among the [10. C. Rutæ. Dub. Confection of rue. Romans was equivalent to the eighth of Dried rue, caraway, laurel berries, each, an amphora, to a cubic half foot, or to

CONGLOBATE (conglobo, to gather enema. Dose pj. to 3j. diffused in half of a globular form, like those of the absorbent system.

CONI VASCULOSI. Vascular cones;

the Cicuta maculata of English wri-together). A muscle which contracts

Conia. The active principle of hemlock, in which it exists in combination with an acid called the coniic acid.

[CONJUGATE (conjugatus, yoked to-

gether); growing in a pair.]

CONJUNCTIVA (conjungo, to unite). Adnata tunica. The mucous membrane wasting away of every organ. which lines the posterior surface of the eyelids, and is continued over the fore- another). part of the globe of the eye.

Conjunctiva Granular. A diseased condition of the conjunctiva, the sequel of

purulent ophthalmia.

[Conjunctivitis. Inflammation of the

conjunctiva.

as in the garden honeysuckle.

[CONNIVENT (conniveo, to connive). Converging; having a direction inwards, together). The property by which bodies In anatomy applied to the valvular folds contract. in the mucous membrane of the small

niventes, from their converging or ap-after being temporarily extended. proaching each other.]

[CONSENT OF PARTS. See Sym-

pathy.

CONSERVA (conservo, to keep). conserve, or composition of vegetable and saccharine matter. See Confectio.

CONSTIPATION (constipo, to crowd effect of a diminution of heat. together, from con, and stipo, to cram). of the bowels being so crammed together part on which the blow is received. as to obstruct the passage.

stituent part of a medicinal formula, sig-which forbid the exhibition of a remedy. nifying "that which imparts an agreea-ble form." See Prescription.

the body; natural qualities, &c.

- 1. Constitution of the Body-Diathesis, met with in commerce. The condition of the body; the "pro- nia. pria," or peculiarities, as distinguished Celsus.
- 2. Constitution of the Air. That peeueases their peculiar characters on parti- action. cular occasions. It is denominated by Sydenham, bilious, dysenteric, &c.

[CONSTITUTIONAL,

the constitution.

CONSTRICTOR (constringo, to bind be possessed by certain medicines.]

any opening of the body, as that of the pharynx.

CÓNSUMPTION (consumo, to waste away). Wasting of the body; phthisis,

or marasmus.

104

CONTABESCENTIA (contabesco, to waste away). Atrophy, or consumption;

CONTAGION (contingo, to touch one The propagation of disease from one individual to another,-properly by contact. Compare Infection.

[CONTAGIOUS. Capable of being

communicated by contact.]

[CONTORTED (con and torqueo, to twist). Twisted. In botany signifies twist-CONNATUS (connascor, to be born ed in such a manner that each piece of a together). Connate. Born with another; whorl overlaps its neighbour by one marcongenital. A term applied in botany to gin, and is overlapped by its other neightwo opposite leaves united at their bases, bours by the other margin, as in the æstivation of oleander.

CONTRACTILITY (contraho, to draw

1. The property by which the fibrous intestines, which are called valvulæ con-tissues return to their former dimensions,

2. The property of the muscular fibre, by which it shortens on the application of a stimulus; more properly Irritability.
CONTRACTION (contraho, to draw together). A rigid state of the joints. Also, a decrease of volume, the usual

CONTRA-FISSURE (contra, against, Obstipatio. Costiveness; confinement of findo, to cleave). A fracture of the skull, the bowels; constipation; the contents produced by a contre-coup opposite to the

CONTRA-INDICATION (contra, CONSTITUENS. The vehicle; a con- against, indico, to show). Circumstances

CONTRAJERVA (contrayerva, Indian Spanish for alexipharmic). A species of CONSTITUTION (constitue, to esta- Dorstenia, to which the contragerra root blish). A state of being; the temper of was formerly referred: but Dr. Percira says that the root of this species is not See Dorste-

CONTRE-COUP. A term used synofrom the "communia," or generalities. | nymously with contra-fissure; but it is

rather the cause of this effect.

[CONTRO-STIMULANT (contra, liar state of the air or vapour from the against, stimulus, an excitant). A subearth, which induces epidemics, or im-stance, according to Rasori, which has presses upon epidemic or sporadic dis the property of directly duninishing vital

[CONTRO-STIMULUS. A term given by Rasori to a doctrine which he origi-Inherent in nated, and which is founded on the contro-stimulant properties supposed to

bruise.

grow strong). The state of recovery.

CONVOLUTA (convolvo, to wrap together). [Convolute.] A term applied nickel, and iron. See Cuprum. to the upper and lower turbinated bones of the nose.

[In botany applied to a form of æstivaleaf is wholly rolled up in another.]

CONVOLUTION (convolvo, to roll tois rolled upon itself. Hence the term is of the fæces in the intestines. Hence applied to the windings and turnings of the terms copragoga or eccoprotica, dethe cerebrum, called gyri; and to the noting purgatives, or medicines to quickfoldings of the small intestines.

CONVOLVULACEÆ. The Bindweed tribe of Dicotyledonous plants. Herba-root of Coptis trifolia. ceous plants with leaves alternate; flowers regular, monopetalous; stamens inserted into the base of the corolla; ovarium superior, 2-4 celled; seeds albuminous.

 Convolvulus Scammonia, 'The plant whose root yields the hard, brittle, ash-shaped.] coloured resin called scammony. It conposed to be a vegetable alkali.

Convolvulus Jalapa. The former purga, and probably by other species.

CONVULSION (convello, to pull to-Spasm. contractions of the muscles, with alter-wrack. nate relaxations, commonly called fits.

of several species of Copaifera.

1. Resin of Copaiva. A brown resinous of iron. mass, left after the balsam has been delow brittle resin, called copairic acid; the circulation.

sules formed of a concentrated solution ten grains of the balsam of copaiva.

COPAL. A resin obtained from the COREDIALÝSIS (κορη, the pupil, Hymenæa Courbaril, and also termed διαλυσις, loosening). Iridodialysis. The

jatahy or jatchy.

Croton Pseudo-China of Schiede. It ment. has some resemblance to Cascarilla.]

from the island Cyprus, where it was retomia, Corectomia, Coredialysis, Irifirst wrought). A red metal, found in dencleisis, Iridectomedialysis, Scleroticthe common ore called copper pyrites, ectome. Among its compounds are red copper, or [COREONCION (κορη, the pupil, ογκος,

4. When a Dislocation occurs in conancient constituent in a prescription, sequence of a disease destroying the carmeaning that which directs the operation tilages, ligaments, and articular cavities

5. Desault divided Dislocations of the humerus into the primitive, which are Mal d'estomac, or the sudden effects of external violence; cachexia Africana; a disease observed and the consecutive, which follow the former, by the influence of other causes, Distinct. Applied in as of a fresh fall, while the arm is sepa-

DISPENSARY (dispenso, from diver-DISEASE. Any morbid state in ge-sim penso, frequent of pendeo, to distrineral; change of structure, as distin-bute by weighing). A shop in which gnished from disorder of function in par-medicines are compounded; and an inticular. It is termed acute, when severe, stitution where the poor are supplied

DISPLACEMENT. A process applied

heat, contagion; endemic, when prevail-ing locally, as from marsh miasma; in-founded on the long-known fact, that tercurrent, when it is sporadic, occurring any quantity of liquid with which a in the midst of epidemic or endemic dis-powder may be saturated, when put into a proper apparatus, may be displaced by Agents which an additional quantity of that or of an-

DISSECTION (disseco, to cut in pieces). DISINFECTION. The purification of The display of the different structures of the animal body by means of the scalpel.

DISSEPIMENT (dissepio, to separate).

DISTEMPER. Catarrhus caninus. An affection occurring among dogs, and

from the state of the nostrils.

DISTENTION (distendo, to stretch) out). The dilatation of a hollow viscus dle). The bifurcation, or separating into by too great accumulation of its con- two, of an artery, a nerve, &c. tents.

Distichiasis, A term applied by Gorræus, ment of the uterus passes. Heister, and St. Ives, to an affection in which each tarsus has a double row of alpinia coriaria, imported from Carthage. eyelashes, which, inclining inward, irri-It abounds in tannin. tate the eye, and keep up ophthalmia. See Trichiasis.

Distichous. Arranged in two rows,

means of a retort, alembic, or still. Dry of Jena. distillation is performed in the same way as the humid, except that the substance testing of the lungs of a fœtus, in order is neither immersed nor dissolved in any menstruum. It is termed sublimation.

I. Distillation destructive. The sub-living or dead.] jection of bodies to a red heat in close vessels, and the collection of the pro-

ducts.

the receiver, where it is condensed.

3. Destillatio per ascensum, in which stamens. the vapour ascends into the head of the DOGMATIC (δογμα, dogma, from still, and thence passes into the worm, δοκεω, to think). The name of an ancient

before it is condensed.

being placed over the materials.

DISTOMA HEPATICUM (dig, twice, of facts). $\sigma \tau \delta \mu a$, the month, $\tilde{\eta} \pi a \rho$, the liver). The commonly of sheep, goats, &c.

DISTORTION (distorqueo, to wrest aside). A term applied to the spine, or the several species of Cornus.] limbs, when they are bent from their na-

tural form.

DISTORTOR ORIS (distorqueo, to twist on one side). A name given to pruriens. Cowhage; vulgo, cow-itch; a one of the zygomatic muscles, from its plant of the order Leguminosæ. distorting the mouth, as in rage, grinning, Dolichi pubes. L. The stiff hairs of

DISTRIX (δίς, twice, θρίζ, the hair). Forky hair; a disease of the hair, in

which it splits at the ends.

make water). A large flow of urine.

Diuretics. Medicines which augment

the urinary discharge.

DIURNATION (diurnus, daily). press the state of some animals, as the sian ammoniacum. It occurs in the tear

vulgarly called the snaffles, or snuffles, bat, during the day, contrasted with their activity at night. Compare Hibernation.

DIVARICATION (divarico, to strad-

DIVERTICULUM NUCKII. The DISTICHIA (δις, twice, στίχος, a row). opening through which the round liga-

DIVI-DIVI. The legume of the Cas-

DOBEREINER'S LAMP. A method of producing an instantaneous light, by throwing a jet of hydrogen gas upon as the florets of many grasses. Bifarious, recently-prepared spongy platinum; the DISTILLATION (distillo, to drop by metal instantly becomes red hot, and little and little). The vaporization and then sets fire to the gas. This discovery subsequent condensation of liquids, by was made in 1824, by Prof. Dobereiner

[DOCIMASCIA PULMONALIS. The to ascertain whether it has respired, and consequently whether it was born

DÖCIMASŤIC ART (δοκιμάζω, to prove by trial). The art of assaying.

DODECANDRIA (δώδεκα, twelve, ἀνὴρ, 2. Destillatio per latus, in which the a man). The eleventh class of plants in vapour passes laterally from the retort to the Linnæan system, characterized by the presence of from twelve to nineteen

sect of physicians, who endeavoured to 4. Destillatio per descensum, in which discover the essence of diseases and their the vapour descends into a lower cavity occult causes by reasoning, whilst a rival of the vessel, to be condensed, the fire sect, the Empyrics, restricted themselves to experience, that is to the observation

DOG-ROSE. Rosa Canina. fluke, a worm sometimes found in the tum. The ripe fruit is called hip or hep, liver and gall-bladder of man, but more and is used for making the confection of

that name.

[DOGWOOD. The common name of

[DOLABRIFORM (dolabella, a hatchet,

forma, resemblance). Hatchet-shaped.]
DOLICHOS PRURIENS. Mucuno

the Dolichos pods, employed as a me-

chanical anthelmintic.

DOLOMITE. A magnesian limestone: a mixture or combination of the carbon-DIU'RESIS (διά, through, οὐρέω, to ates of lime and magnesia, having the crystalline form of calc-spar.

DORE'MA AMMONIACUM (δώρημα, a gift). The Ammoniacum Dorema; an A Umbelliferous plant, which yields the term introduced by Dr. M. Hall to ex-ammoniacum of commerce, or the Per-

An indigenous plant of the order Araceæ, The name is inappropriate, as the appathe root of which is reputed to be stimu-ratus evidently owes its efficacy to the

DRY ROT. A species of decay to DRACUNCULUS (dim. of draco, a which wood is subject. The wood loses The Gumea Worm, which all its cohesion, and becomes friable, and breeds under the skin, and is common fungi generally appear upon it; but the first destructive change is probably of a DRAGANTIN. A mucilage obtained chemical kind, allied to the action of fer-

mentation .- Graham.

DRY VOMIT OF MARRIOTT. A substances, mostly obtained from some sisting of equal proportions of tartarized

DRYOBALANOPS AROMATICA. A tree of the order Dipteraceæ, yielding a DRASTICS (δράω, to effect). Purga-liquid called camphor oil, and a crystalline solid termed Sumatra or Borneo camphor.

DUCTILITY (duco, to draw). of medicine, differing from a mixture property of bodies by which they admit

DUCTUS (duco, to lead). A duct; a conduit-pipe for the conveyance of liquid. 1. Ductus hepaticus. The duct which

results from the conjunction of the proper Wintera aro-ducts of the liver.

The excretory 2. Ductus cysticus.

3. Ductus communis choledochus. The DRIVELLING. Slavering; an invo-bile duct, formed by the junction of the

4. Ductus pancreaticus. The pancreatic DROPS. Guttæ, A form of medicine duct, which joins the gall-duct at its in which the dose is measured by drops, entrance into the duodenum. Near the duodenum this duct is joined by a smaller DROPSY (from the Greek, δέρωψ— one, called ductus pancreaticus minor.

Latin, hydrops:-Th. νόωρ, water, and 5. Ductus arteriosus. A tube which, Aqua inter in the fætus, joins the pulmonary artery cutem. An effusion into the cellular with the aorta. It degenerates, after

6. Ductus venosus. A branch which, distinguished by a sweet or mawkish in the fœtus, joins the inferior vena cava taste.

with the umbilical vein.

7. Ductus ad nasum. tinued from the lachrymal sac, and open-from the acetates. ing into the inferior meatus of the nose.

8. Ductus incisorius. A continuation A shrub which is low and much of the foramen incisivum between the branched.

palatine processes into the nose.

side of the thorax, &c., and opening into hydatids of the brain. the junction of the right jugular and subclavian veins,

10. Ductus prostatici. tanum.

the tail of the epididymis, and enters the niventes.

spermatic cord.

Ductus galactoferi vel lactiferi. denum. Milk-ducts, arising from the glandular grains of the mamma, and terminating Two fold, as duplo-carburet, two fold in sinuses near the base of the nipple.

13. Ductus thoracicus, The great trunk formed by the junction of the ab-upon itself.]

sorbent vessels.

signation of the right great lymphatic of the brain. vein, formed of lymphatic vessels arising

thra; it is about three quarters of an inch alburnum, or sapwood. in length.

of the parotid gland,

17. Duct of Wharton. The excretory allied to tombac and pinchbeck. duct of the submaxillary gland. These two last, with the sublingual, constitute beaten out in very thin leaves. the salivary ducts.

the uriniferous canals of the kidneys.

DUELECH. A term employed by Van Helmont to denote the state in which from vegetable substances. the spirit of urine is precipitated when it forms calculous concretions.

DULCAMA'RA (duleis, sweet, amarus, bitter). Woody Nightshade, or Bitter-sweet; a species of Solanum. The twigs of this plant yield a salifiable principle called solanine; a bitter principle, of a honey smell and sweet after-taste, called

given by Frank to sweet-spittle, or that form of ptyalism, in which the saliva is loured state of the skin.

DUMASINE. An empyreumatic oil, A duct con-obtained by rectifying acetone derived

DUMOSE (dumus, a bush).

DUNT. The provincial name of a 9. Ductus lymphaticus dexter. A duct staggering affection, particularly observformed by the lymphatics of the right ed in yearling lambs, occasioned by

DUODENUM (duodeni, twelve). Ventriculus succenturiatus. The twelve-inch The ducts of intestine, so called from its being equal the prostate, from twenty to twenty-five in length to the breadth of twelve finin number, opening into the prostatic gers; the first portion of the small intesurethra, on each side of the veru mon-times, beginning from the pylorus. The inner surface of the duodenum is covered 11. Ductus deferens. Another name by a mucous membrane, presenting a for the vas deferens, which arises from number of folds, called the valvulæ con-

DUPLUM (duo, two, plica, a fold). carburet.

[Duplicature. The folding of a part

DURA MATER (hard mother). 14. Ductus thoracicus dexter, A de-ninx exterior. The outermost membrane gnation of the right great lymphatic of the brain. See Matres,

DURA'MEN (durus, hard). The infrom the axillary ganglia of the right terior, more deeply-coloured, and harder portion of the trunk and branches of 15. Ductus ejaculatorius. Aduct within trees, commonly called heartwood, as disthe prostate gland, opening into the ure-tinguished from the exterior portion,

DUTCH GOLD. An alloy of copper 16. Duct of Steno. The excretory duct and zinc, in which the zinc is in greater proportion than it exists in brass. It is

DUTCH MINERAL. Metallic copper

DUTCH PINK. Chalk or whiting, 18. Ducts of Bellini. The orifices of dyed yellow, with a decoction of birchleaves, French berries, and alum.

DYES. Colouring matters, derived Colouring matters form, with several metallic ox-

ides, insoluble compounds called lakes. DYS $(\delta \hat{v}_{\varsigma})$. An adverb, signifying

with difficulty; badly. Hence-

 Dys-æsthesia (αἰσθάνομαι, to perceive). Impaired feeling. Dr. Young terms defective memory dysæsthesia interna.

 Dys-cataposia (κατάποσις, the act of picro-glycion; and a sweet principle, swallowing, from καταπίνω, to swallow). Called dulcarine.

Difficulty of swallowing liquids; a term DULCE DO SPUTORUM. The name applied by Dr. Mead to hydrophobia.

Dys-chroa (χρόα, colour). A disco-

Dys-cinesia (κινέω, to move). Im-!

perfect motion.

 Dys-crasia (κρᾶσις, the state of the blood, &c., from κεράννυμι, or κεράω, to digestion; difficulty of digestion. mix). A morbid state of the constitution.

Dys-ecaa (акой, hearing). Cophosis.

Impaired hearing.

- Dysentery (ἔντερα, the bowels). Inlarge intestines. writers it is named colite; and in com-fidgets. mon language it is termed flux, or bloody charges are free from blood or sangui-windedness; pursiness; phthisic. nolent.
- Dys-lysin (λύσις, solution). An in-Slow or impeded emission of semen. gredient of bilin, which remains undissolved, as a resinous mass, during the Difficult parturition. solution and digestion of bilin in dilute hydrochloric acid.

 Dys-menorrhæa (μὴν, a month, ῥέω, to flow). Difficult or painful menstrua-

10. Dys-odes (οζω, to smell). Having a bad smell; a term applied by Hippocrates to a fetid disorder of the small pain, this is termed ardor urinæ.

sight.

 Dys-orexia (ὅρεξις, appetite). Deprayed appetite.

Dys-pepsia (πέπτω, to concoct). In-

14. Dys-phagia (φάγω, to gat). culty of swallowing; choking. Diffi-

15. Dys phonia (φωνή, voice). Diffi-

culty of speaking.

 Dys-phoria (φέρω, to bear). Inquiflammation of the mucous lining of the etude; a difficulty of enduring one-self; By certain French it embraces the affections of anxiety and

17. Dys-pnαa (πνέω, to breathe). Difflux, according as the intestinal dis-ficult respiration; short breath; short-

Dys-spermatismus (σπέρμα, semen).

Dys-tochia (τίκτω, to bring forth).

20. Dys-uria (ovov, urine). Suppression or difficulty in discharging the urine; Total suppression painful micturition. is called ischuria; partial suppression, dysuria; the aggravated form, when the

urine passes by drops, strangury; when the discharge is attended with heat or

[DYNAMOMETER (δυναμις, force, 11. Dys-opia ($\ddot{\omega}\psi$, an eye). Impaired μετρον, a measure). An instrument for measuring force.]

\mathbf{E}

EAR. Auris. The organ of hearing. ternal ear; the middle ear, or tympanum; continent. and the internal ear, or labyrinth.

Ear-wax. Cerumen aurinm; [q. v.] EARTH. globe. In chemical language the earths potass, are termed metallic oxides; four of these, are termed, from their properties, alka- existing in bones after calcination. line earths. To these must be added,-

 Alumina, or clay; the oxide of alu-the name of a distilled water. minum; argillaceous earth, constituting the basis of sapphire, pipe-clay, slate, &c.

Glucina, the oxide of glucinum;

in the gadolinite of Ytterby.

4. Thorina, the oxide of thorium; procured from the mineral thorite.

5. Zirconia, the oxide of zirconium; the Dublin pharmacopæia. forming the bulk of hyacinth.

4. Eau de Luce. The ti

amethyst, rock crystal, &c.

EARTH-BATH. A remedy consisting It consists of three parts; viz., the ex-literally of a bath of earth, used on the

EARTH OF ALUM. A preparation used in making paints, and procured by The general term for the precipitating the earth from alum dismaterials which compose the crust of the solved in water, by adding ammonia or

EARTH OF BONE. A phosphate of viz., baryta, strontia, lime, and magnesia, lime, sometimes called bone phosphate,

EAU. The French term for water;

1. Eau de Bababe. A liqueur manufactured in Barbados from lemon-peel.

2. Eau de Cologne. Aqua Coloniensis, found in the enclase, beryl, and emerald, or Cologne water; a perfume, and an 3. Yttria, the oxide of yttrium; found evaporating lotion in headache, fever, &c.

> 3. Eau de Javelle. Bleaching liquid, or the Aqua Alkalina Oxymuriatica of

4. Eau de Luce. The tinct, ammoniæ 6. Silica, the oxide of silicum; con-comp. of the pharmacopæia. The French stituting almost the whole of flint, opal, name is derived from that of an apothecary at Lille.

with water.

Eau de Rabel. Aqua Rabelliana. So named from its inventor, the empiric linetuarium. A pharmaceutical prepa-Rabel. It consists of one part of sul-ration of a certain consistence, and of a phuric acid and three of rectified spirit sweet flavour. See Lohoch, of wine, constituting a sort of sulphuric

spirit of the first distillation.

EBLANIN. Pyroxanthin. stance obtained from raw pyroxylic spirit.

The boiling or bubbling of liquids; the ness. production of vapour at the boiling point.

from charred ivory shavings.

ECBOLICA (ἐκβόλιον, a medicine which expels the fœtus). Amblotica Medicines which excite uterine contractions, and thereby promote the expulsion Compare Empyesis. of the contents of the uterus.

ECCHYMOMA (ἐκχύω, to pour out), one's senses). Ecstasy, or trance. A term synonymous with Ecchymosis, or extravasation, or that form of the affecsometimes called crustula and sugillatio.

has been given to puerperal tumid-leg,

or phiegmasia dolens.

ÉCCHYMO'SIS (ἐκχύω, to pour out). Extravasated blood, from bruises; in Eversio palpebræ. Eversion of the eyetyphus, purpura, &c. It assumes the lids. Compare Entropium. several forms of-

1. Petcchiæ. Stigmata, or specks.

Vibices, or ecchymomata. Patches.

Sanguineous discharges.

[ECCOPROTICA (εξ, out of, κοπρος, fæces). Mild aperients or laxatives. See spots; arising in a part which has been Cathartics.

ECCRITICA (ἐκκρίνω, to strain off). Diseases of the excernent function.

Extra-uterine feetation; imperfect feeta-ling as the exciting cause is sugar or tion in some organ exterior to the uterus, lime. as in one of the ovaria, the Fallopian tube, or the cavity of the abdomen.

ECHI'NUS (extros, the sea hedge-hog). thema mercuriale.

hairs or prickles, like an echinus; as the front teeth, as the armadillo. fruit of the chestnut.]

Echino-derma (δέρμα, skin). fourth class of the Cyclo neura, or Radi-paration. Also the process of freeing a ata, consisting of simple aquatic animals, difficultly soluble substance from one that

5. Eau de Naphre. Aqua naphæ. A Circuli ignei. Convulsive motions, espebitter aromatic water, prepared by discially of the mouth, eyelids, and fingers, tilling the leaves of the Seville orange so excessively rapid that it is often difficult to follow them.

ECLEGMA (ἐκλείχω, to lick.) Linctus;

ECPHLYSIS (ἐκφλύζω, to bubble up). Vesicular eruption confined in its action 7. Eau de Vie. Aqua vitæ. Ardent to the surface. This term comprehends the several species of pompholyx, herpes, A sub-rhypia, and eczema. Compare Emphlysis.

ECPHRONIA (ἔκφρων, out of one's mind). Insanity; craziness; a term com-EBULLITION (ebullio, to bubble up). prising the species melancholy and mad-

ECPHYMA (ἐκφύω, to spring out). EBUR USTUM NIGRUM. Cologne cutaneons excrescence, including the black. Ivory black; charcoal prepared several species verruca, caruncula, clavns, callus.

ECPYESIS (ἐκπυέω, to suppurate). Humid scall, including the species impetigo, porrigo, ecthyma, and scabies.

ECSTASIS (ἐξίσταμαι, to he out of

EC'THYMA (ἐκθύω, to break out). An eruption on the skin. Irritable pustule. tion which takes the name vibices; it is Papulous scall. Tetter; ulcerated tetter. Inflammation of the sebaceous follicles, Ecchymoma lymphatica. A term which characterized by phlyzaceous pustules.

ECTOPIÆ (ἐκ, out, τόπος, a place).

Displacement of bones; luxations.

ECTROPIUM (ἐκτρέπω, to evert).

EC'ZEMA (ἐκζέω, to boil out). Literally, that which is thrown up by boiling. Heat eruption; minute vesicles, which form into thin flakes or crusts.

I. Eczema solare. Sun heat; heat exposed to the direct rays of the sun.

2. Eczema impetiginodes. Depending on a local irritation, and constituting the ECCYESIS (ἐκκυέω, to be pregnant). grocers' and the bricklayers' itch, accord-

> 3. Eezema rubrum. Excited by the use of mercury, and formerly called ery-

A calcareous petrifaction of the echinus. | EDENTATA (edentulus, toothless). | Echinate. Bristly; covered with suff Toothless animals; quadrupeds without

EDULCORATION (dulcis, sweet). The The sweetening of any medicinal precovered with a spiny shell or a coriaceous is easily soluble, by means of distilled skin.

water. It differs little from lixiviation, ECLAMPSIA (ἐκλάμπω, to shine forth). except that the former term respects the

insoluble residue, the latter the soluble the skin has the appearance of a roll or

portion.

EDULCORATOR. Dropping Bottle. tities of water to test tubes, watch-glasses, whole of the bulb of the urethra. &c. It is made by inserting a cork, con-ejaculatores seminis, they act under the taining a glass tube, into a phial holding influence of the reflex function; as accesome distilled water. The phial being levatores urina, as voluntary muscles. inverted, the portion of air confined [ELABORATION (laboro, to labour). water, drop by drop, or in a stream, ac-living organs, before becoming nutritive.] cording as the position of the phial is perpendicular or horizontal.

EEL OIL. An oil procured from eels pounds of volatile oils and sugar. by roasting, employed as an ointment for stiff joints, and by ironmongers for pre-related to the oleic acid of oils.

serving steel from rust.

vev). A term given to vessels which

efferentia.

EFFERVESCENCE (effervesco, to oils. grow hot). The commotion produced in form of bubbles, as on pouring acid on Boullay. See Igreusine. chalk.

solve a scruple of carbonate of soda or the adulteration of olive oil. potass in an ounce of water, and two drachmsofcinnamon water with a drachm Palm, which yields the palm oil, and, it and a half of syrup of orange peel; add is said, the best kind of palm wine. a tablespoonful of fresh lemon juice, and drink the mixture immediately.

tals, by the removal of their moisture.

those arising from animals or vegetables, portions of fixed oils. as odours.

The escape of a fluid out of its natural and other plants. vessel or viscus into another part. Also, of lymph or serum, on different surfaces.

EGESTA (egero, to carry out).

EIGHTH PAIR, or PNEUMO-GASexciter of respiration.

C. Warren to dermoid tumours, in which kinds, the English and the Maltese.

coil.ì

EJACULATORES (ejaculo, to cast An instrument for supplying small quan-lout). A pair of muscles surrounding the

above the liquid is expanded by the The different changes which assimilable warmth of the hand, and expels the substances undergo, by the action of the

ERYTHE'MA (ἐρυθρος, red). Morbid | ESO-GASTRITIS (ἔσω, within, and redness of the skin; inflammatory blush. gastritis). Inflammation of the mucous A red fulness of the integuments, termi-membrane of the stomach. nating in scales, and occasionally in gan-

ERYTHRÆA CENTAURIUM. Com-duct of distillation. mon Centaury; a plant of the order Gentianacea, possessing similar effects to term originally applied to the volatile oil those of Gentian. Its bitter principle is of the orange berry, but now denoting called centaurin.

ERYTHRIC ACID ($\hat{\epsilon}\rho\nu\theta\rho\delta\varsigma$, red). The of both the hitter and sweet orange. name given by Brugnatelli to purpuric

acid.

&c., obtained by Dr. Kane from the Roc-tion. cella tinctoria.

jaundice. It unites with nitrogen, and syrup with lime-water. produces a red compound.

ERYTHROID (ἐρυθρὸς, red, εἶδος, likeness). A term applied to the cremasteric covering of the spermatic cord and testis

TERYTHRONIUM AMERICANUM. Erythronium. An indigenous, Liliaceous plant, the recent bulb of which is emetic in the dose of ∋j. to 7ss.]

ERYTHROPHYLLE (ἐρυθρὸς, red, φύλλον, a leaf). A term applied by Berzelius to the red colouring matter of fruits and leaves in autumn.

arteriosa. A form of plethora, in which in rannaculus, rubus, &c. the blood is rich in fibrin and in bright red pigment; a state corresponding in obtained from spermaceti; also termed some measure with what has been term-hydrate of oxide of cetyl. The term is ed the arterial constitution.

ESCHAR (ἐσχαρόω, to form a scab or crust). A dry slough; a gangrenous portion, which has separated from the healthy duced by a remarkable decomposition of

substance of the body.

Escharotics. Substances which form an eschar, or slough, when applied to the guished as sulphuric ether, from the mode skin.

ESCULENT. An appellation given to may be eaten for food.

ESCULINE. An alkaloid obtained brated anodyne liquor. from the Æsculus Hippocastanum, or horse-chesinut, from the ash, &c.

ESENBECKINA. 'An organic alkali, procured from Brazilian Cinchona, or the bark of the Exostema Souzanum, a native plant of Brazil, and named from the erroneous idea that the bark belonged to ness). Cribriform, or sieve-like; a bone Esenbeckia febrifuga.

ESO-ENTERITIS (ἔσω, within, and sion of the olfactory nerves. enteritis). Inflammation of the mucous Ethmoidal crest, or spine.

membrane of the intestines.

ESPRIT. The French term for spirit, or essence. Any subtile and volatile pro-

ESSENCE DE PETIT GRAIN. A the volatile oil obtained from the leaves

ESSENTIA ABIETIS. Essence of Spruce; prepared by boiling in water ERYTHRIN (ἐρυθρός, red). One of a the young tops of some Coniferous plant, series of substances, including erythrilin, as the Abies nigra, or Black Spruce, and erythrin bitter or amarythrin, telerythrin, concentrating the decoction by evapora-

ESSENTIA BINA. A substance used ERYTHROGEN (ἐρυθρὸς, red, γεννάω, to colour brandy, porter, &c., and preto produce). A green-coloured substance pared by boiling coarse sugar till it is found in the gall-bladder, in a case of black and bitter; it is then made into a

ESSENTIAL OILS. Oils obtained by distillation from odoriferous vegetable substances. Several of the volatile or essential oils are essences.

The Nettle-rash, or the ESSERA.

Urticaria of Willan. Good.

ESTIVATION (æstivus, belonging to summer). Prattoration. A term applied to the condition of a flower when its parts are unexpanded. See Vernation.

ETÆRIO (ξταιρεία, an association). A term applied by Mirbel to an aggregate ERYTHROSIS (ἐρυθρὸς, red). Plethora fruit, the parts of which are achenia, as

ETHAL. A peculiar oily substance, formed of the first syllables of ether and alcohol.

ETHER (αίθηρ, ether). A liquid proalcohol, by sulphuric, phosphoric, and arsenic acids. It is sometimes distinof preparing it.

ETHEREAL OIL. The Oleum Vini, those plants, or any part of them, which found in the residuum of sulphuric ether, and forming the basis of Hoffman's cele-

ETHERINE. A term synonymous with olefiant gas, elayl, or hydruret of

ETHEROLE. A carbo-hydrogen, commonly known as light oil of wine.

ETHMOID (ήθμος, a sieve, είδος, likeof the nose, perforated for the transmis-

Ethmoïdal crest, or spine. See Crista galli.

ETHYL ($ai\theta \lambda \rho$, ether, $i\lambda \eta$, matter). A | Scrophulariaccæ, and a popular remedy hypothetical radical, existing in other and for diseases of the eye. its compounds; ether being the oxide of ethyl, and alcohol the hydrated oxide of lourless liquid, obtained by distillation

2. Crab-yaws. Tedious excrescences

FRANGIPAN. An extract of milk, 1. Simple; when the bone only is di-for preparing artificial milk, made by evaporating skimmed milk to dryness,

FRANKINCENSE. Formerly Oliba-3. Comminuted; when the bone is num, a gum-resin of the Juniperus Lycia; but now the Abietis resina, or Resin of

FRASERA WALTERI. The Ameri-FRÆNUM (fræno, to curb a horse). can Calumba, a plant of the order Gen-A bridle; a part which performs the of tianacea, with the properties of gentian. From us having been sold in France as Three folds of calumba, it was called false calumba.

FRAXINUS ORNUS. The flowering epiglottis to the os hyoïdes and the Ash, or Manna tree; an Oleaceous plant,

which yields manna.

FRECKLES. The little yellow lenti-

temperature at which water is changed

[FREMISSEMENT CATAIRE. A peculiar thrill or tremor, perceived by the finger when applied to the heart or arteries where it exists, resembling that community across of the hair to the eyebrows. See where it exists, resembling that community across and Values. nicated to the hand by the purring of a cat. See Auscultation.]

diagnosis, the vibration communicated to of the part. It occurs in the nose and the hand under certain circumstances, ears in cold climates. when it is applied to the chest, &c. Thoracic fremitus may be produced by a term denoting, in botany, the ovary or speaking (vocal); by coughing (tussive); pistil arrived at maturity. by the bubbling of air through fluids in the lung, (rhoncal); by the collision and or grain for making bread. rubbing together of plastic matter exuded upon the pleural surfaces (rubbing); and any thing. It differs from fragmentum, by pulsation of the lung (pulsatile).]

several species of Rhamnus, called by the French Graines d'Avignou; they the branches are perennial, proceeding

vield a vellow colour.

FREŇCH POLISH. Gum lac dis-

solved in spirits of wine.

FRENCH RED, or ROUGE. Genuine or little shrub. carmine, one ounce, mixed with fine

FRENCH WHITE. The common de-

signation of finely pulverized talc.

property by which a substance is capable of being crumbled and reduced to perishing quickly.] powder.

FRICTION (frico, to rub). The act of rubbing the surface of the body with which possess the property of smoke. the hand, a brush, or linera It is perointments, liniments, &c.

FRIESLAND GREEN.

cold bath. See Bath.

applied to certain chemical mixtures.

FRIGUS (frigeo, to be cold, from cold, and is derived from alyos, pain, be-from cloth before the soap is applied. cause cold causes pain.

materials of glass, on calcination.

FROND (frons, a branch). A term or friction. branch.

FROST-BITE. A state of numbness, or torpefaction of any part of the body,

[FREMITUS. Vibration. In physical followed, unless relieved, by the death

FRUCTUS (fruor, to enjoy). Fruit;

FRUMENTUM. All kinds of corn

FRUSTUM. A piece or morsel of which is a piece broken, and from seg-FRENCH BERRIES. The fruit of mentum, which is a piece cut off.

FRUTEX. A shrub; a plant, of which directly from the surface of the earth without any supporting trunk. When very small, the plant is termed fruticulus,

FUCUS VESICULOSUS. A sea-weed, sifted starch powder, according to the termed vernacularly bladder-wrack, first shade required. described by Clusius, under the name of quercus marina. Burnt in the open air, and reduced to a black powder, it forms FRIABILITY (frio, to crumble). The the regetable athiops, a species of charcoal.

[FUGACIOÚS (fugax). Fading or

FULI'GO. Soot or smoke. Wood-FRIARS' BALSAM. The Tinctura soot, or fuligo ligni, is the condensed benzoes comp., formerly balsamum trau-smoke of burning wood, used as a species of charcoal.

Fuliginous. The name of vapours

[FULIGOKALI (fuligo, soot, kali, formed either in the dry way, or with potassa). A remedy for chronic cutaneous diseases, prepared by boiling one Brunswick hundred parts of soot and twenty parts green; an ammoniaco-muriate of copper. of potassa, in water, then filtering and FRIGIDARIUM (frigidus, cold). The evaporating the solution. A sulphuretted fuligocali is prepared by dissolving four-FRIGORIFIC (frigus, coldness). Hav-teen parts of potassa, and five of sulphur, ing the quality of producing extreme in water, then adding sixty parts of fulicold, or of converting liquids into ace, as gocali, evaporating and drying the residuum.]

FULLERS' EARTH. A variety of φρίσσω, to have an ague fit). Cold; clay, containing about 25 per cent. of trembling with cold. This term differs alumina, and so named from its being Cold; clay, containing about 25 per cent. of from algor, which denotes a starving with used by fullers to remove the grease

FULMINATING MIXTURE (ful-FRITT. The mass produced by the mino, to thunder). A term applied to certain mixtures which detonate by heat

applied to the leaves of Ferns, and other I. Fulminating gold. A deep olive-Cryptogamic plants, from their partaking coloured powder prepared by keeping at once of the nature of a leaf and a recently precipitated peroxide of gold in strong ammonia for about a day.

2. Fulminating Mercury. A powder FUNCTION (fungor, to discharge an sion caps.

3. Fulminating silver. A black pow-

strong solution of ammonia.

4. Fulminating ammoniuret of silver. pod of life. A combination of oxide of silver and

5. Fulminating platinum. A substance expulsion, &c. prepared by the action of ammonia on a

solution of sulphate of platinum.

6. Fulminating powder. A mixture of the voluntary motions. three parts of chlorate of potass, and one in powder.

in chemical bodies by friction or heat.

FULMINIC ACID. A compound of that of the fæces, &c. cyanogen, which explodes when heated, rubbed, or struck. It is said to differ of any of the viscera.] from cyanic acid in the ratio of its elements, and in containing hydrogen.

FUMARIA OFFICINALIS. eases. The expressed juice and a de-called sporidia. coction of the leaves are employed.]

FUMIGATION (fumigo, to perfume). The use of fumes, chiefly chlorine, nitric ing the base of fungi. acid, or vinegar, for the removal of effluvia or miasmata. Also, the application forma, likeness). mercury or sulphur to sores, &c.

FUMING LIQUOR (fumus, smoke) head, like that of a mushroom. A chemical mixture, which emits fumes

or vapour on exposure to the air.

formerly called hepar sulphuris volatilis, too high, large, flabby, and unhealthy. &c. The vapour is decomposed by oxygen, producing fumes.

acid. It is remarkable for its insupporta-tile tissue, &c. ble odour and spontaneous inflammability in air. It is also called alcarsin.

3. Libavius's fuming liquor. The anhydrous bi-chloride of tin; a colourless, and vein, &c. limpid liquid, which fumes strongly in

humid air.

obtained by dissolving mercury in nitric office). The office of an organ in the acid, and pouring the solution into alco-lanimal or vegetable economy, as of the hol. It is employed for making percus-heart in circulation, of the leaf in respiration, &c.

1. Vital functions. Functions immeder prepared by leaving oxide of silver diately necessary to life; viz. those of for ten or twelve hours in contact with a the brain, the heart, the lungs, &c.; whence these have been called the tri-

2. Natural functions. Functions less ammonia, of violently explosive charac-instantly necessary to life; as digestion, absorption, assimilation; reabsorption,

3. Animal functions. Functions of relation to the external world; as the senses.

4. Reflex function. A term applied by of sulphur; or three parts of nitre, two Dr. M. Hall to that action of the muscles of carbonate of potass, and one of sulphur, which arises from a stimulus, acting through the medium of their nerves and FULMINATION (fulmen, a thunder-the spinal marrow: thus the larynx closes bolt). The explosion which takes place on the contact of carbonic acid, the pharynx on that of food, the sphincter ani on

> [FUNDUS. in anatomy, the bottom

FUNGI. The Mushroom tribe of Cellular or Acotyledonous plants. Fumi-consisting of a congeries of cellules, tory. An European, Papaveraceous plant, chiefly growing upon decayed substances. formerly much esteemed as a remedy in Sporules lying either loose among the visceral obstructions and eruptive dis-tissue, or enclosed in membranous cases

I. Fungic acid. An acid procured FUMARIC ACID. A monobasic acid, from several species of fungus, by exproduced by heating malic acid, and also pressing their juice, boiling it, forming existing in furnitory, and in Iceland moss. an extract, and treating it with alcohol.

2. Fungin. A whitish substance form-

FUNGIFORM (fungus, a mushroom, Fungus-like; a term of fumes, as of water to the throat, of applied to the papillæ near the edges of the tongue. Having a rounded convex

FUNGUS. A mushroom. A morbid growth of granulations in ulcers, com-1. Boyle's fuming liquor. The proto-monly termed proud flesh. Granulations sulphuret of ammonium; a volatile liquid, are often called fungous when they are

In England, it is a form of enceweights of acetate of potash and arsenious phalosis; in France, nævus, morbid erec-

> FUNICULUS (dim. of funis, a thick rope). A term applied to the spermatic cord, consisting of the spermatic artery

FUNIS UMBILICALIS. The umbilical cord; the means of communication

length is almost two feet.

FURFUR, FURFURIS. Bran.

desquamation of the cuticle. 1. Furfur tritici. Bran.

furaceus, brown or bran bread.

2. Furfuraceous. Branny, or scaly; a term applied to a deposit in the urine, likeness). of that fluid.

FURNACE (furnus). A fire-place employed for pharmaceutical operations, to pour out). The state of melting, as fusion, distillation, sublimation, the Substances which admit of being fused oxidisement, and the deoxidisement, or are termed fusible, but those which resist reduction, of metals. Furnaces have the action of fire are termed refractory. accordingly been termed

duce substances into vapour by heat.

Reverberatory, when so constructed ture.

FUROR UTERINUS. Uterine mad-ture. ness; another term for nymphomania.

FURUNCULUS (furo, to rage). boil, so named from its violent inflamma- expelled.

from alcohol, also termed oil of grain, any decomposition. corn-spirit oil, potato-spirit oil, and hypo-

thetically, hydrate of amule.

out). The property by which bodies assume the fluid state on the application of nent. heat.

monia, and of lime.

FUSIBLE METAL.

between the fœtus and the placenta. Its parts of bismuth, 5 of lead, and 3 of tin; it melts below the temperature at which water boils.

Rose's Fusible Alloy. An alloy con-Panis fur- sisting of 2 parts by weight of bismuth,

with I of lead and I of tin.

FUSIFORM (fusus, a spindle, forma, Spindle-shaped; thickest at which is said to consist of the phosphates the middle and tapering to both ends; a

term applied to certain roots,

FUSION (fusus, melted, from fundo, Fusion differs from liquefaction in being 1. Evaparatory, when employed to re-applied chiefly to metals and other substances which melt at a high tempera-

as to prevent the flame from rising.

3. Forge, when the current of air is salls which contain water of crystallizadetermined by bellows. 1. Aqueous fusion. The solution of

2. Dry fusion. The liquefaction pro-A duced by heat after the water has been

3. Igneous fusion. The melting of an-FUSELOL. An oily liquor obtained hydrous salts by heat without undergoing

FUSTICK, or YELLOW WOOD. The wood of the Morus tinctoria, an Urtica-FUSIBILITY (fusus, melted or poured ceons plant, which yields much yellow colouring matter, which is very perma-

Young fustick, or fustet. The wood of FUSIBLE CALCULUS. A variety the Rhus Cotinus, the arbre à perruque, of urinary concretion, consisting of the or wig-tree of the French, and Venetian mixed phosphates of magnesia and am-Sumach of the English; an Anacardiaceous plant, which yields a fine yellow An alloy of 8 colour, but not durable.

ral, so called from the Swedish chemist milk, φέρω, to carry). Gadolin, who discovered in it the earth milk-conveying, as applied to the ducts

GALACTIA (yála, milk). Mislactagalactirrhæa, or milk-flux.

GALACTIC ACID (yáλa, milk). Lac- ginger. tic acid. The acid of milk, supposed to be merely animalized acetic acid.

A substance which constitutes the prin- and in lump. America, used as a substitute for cream. and having the heads of the carpels much

GADOLINITE. The name of a mine- GALACTOPHOROUS (γάλα, γάλακτος, Lactiferous, or of the mammary glands.

GALANGA MAJOR. Radix Galange. tion; a morbid flow or deficiency of milk; The pungent aromatic rhizome of the the former affection has been termed Alpinia Galanga, a plant of the order Zingiberaceæ, forming a substitute for

GALBANUM. A gum-resin; the secreted juice of the Galbanum Officinale, GALACTIN (γάλα, γάλακτος, milk). an Umbelliferous plant. It occurs in tear

cipal ingredient in the sap of the Galac-todendron utile, or Cow Tree of South ing from the strobile only in being round,

enlarged. The fruit of the Juniper is a

galbulus.

GALEA. Literally, a helmet. The name of the arched upper lip of the for the Walcheren fever, which proved corolla of several labiate plants, as La-so fatal to the English in the year 1809, mium, &c.

Galvate. Arched like a helmet; as applied to the lip of some labiate corollas. [GALEGA OFFICINALIS.

formerly employed as a remedy in malig-nant fevers, bites of snakes, &c., but now GALLIC ACID. An acid obtained

melicratum, and aqua mulsa. fermented, it becomes mead. Metheglin

wine is called hydromel vinosum.

 Hydro-meter (μέτρον, a measure). An instrument for measuring the gravity or chronic, attended with effusion. of fluids, particularly that of the urine. When floating in this liquid, it rises in σάρξ, flesh). A tumour containing air, proportion as the density of the liquid water, and a flesh-like substance. increases; it is graduated from 1 000 to 1 060, so as to exhibit at once the specific plication of pneumothorax with liquid gravity.

 Hydro-me'tra (μήτρα, the nterus). Hydrops uteri Dropsy of the nterus.

28. Hydr-omphalon (ομφαλός, umbilicus). A tumour of the umbilicus containing water.

29. Hydro-pothy (πάθος, affection). The ness. Water-cure; a mode of treating diseases would be preferable.

30. Hydro-pedesis (πηδάω, to spring

31. Hydro-pericardium. Hydrops peri-

32. Hydro-phane (φαίνω, to appear). A which has received the various names variety of opal, which becomes transpaalso called oculus mundi.

33. Hydro-phobia (φόβος, fear). A dread It has been (ύγρὸς, moist), from the patient being un-20. Hydro-cystis (κύστις, a bladder), able to swallow any kind of moisture; phobodipsia (φόβος, fear, and δίψα, thirst), 21. Hydro-dynamics (δύναμις, power), because the patient is thirsty, yet fears the act of drinking little, or frequently, 22. Hydro-gen (γεννάω, to produce), at short intervals; canis rabidi morsus hy A gas formerly termed inflammable air, Avicenna, &c.; dys-cataposia (ôvs, with sent name refers to its forming water, Mead; and recently, entasia lyssa (λύσσα, canine madness), by Dr. Good. The old 23. Hydrolica. A term applied by the writers used the terms aëro-phobia, or a French to solutions of the active princi-dread of air; and panto-phobia, or a tear ples of medicinal agents. Those obtained of all things, as expressive of some of the symptoms.

34. Hydr-ophthalmia (ὀφθαλμὸς, the eye). An ancient superstition respecting the Dropsy of the eye. This affection is divining nature of certain springs and also called hydropthalmus; hydrops oculi; fountains; hence, perhaps, arose the dis-buphthalmus, or ox-eye, denoting the en-

 Hydro-physocele (φυσάω, to inflate, 25. Hydro-met (μέλι, honey). Honey κήλη, a tumour). Hernia, complicated diluted with water; also called mulsum, with hydrocele; hernia, containing wa-

When ter and gas,

36. Hydro-pica (ὕδρωψ, the dropsy). Medicines which relieve or cure dropsy.

37. Hydro-pleuritis, Pleuritis, acute

38. Hydro-pneumo-sarca (πνεθμα, air,

 Hudro-pneumo-thorax. The comeffusion.

40. Hydrop-oïdes (εἶδος, likeness). A term formerly applied to watery excrements.

41. Hudro-pyretus (πηρετός, fever). Sudor Anglicus. Sweating fever, or sick-

 Hydro-rachitis (βάγις, the spine). by the internal and external use of cold Dropsy of the spine. It is congenital, water, &c. The term hydrotherapeia and is then termed spina bifida; or it is analogous to hydrencephalus.

43. Hydro-saccharum (saccharum, su-) gar). A drink made of sugar and water. πτέρον, a wing). Insects which have

 Hydro-sarca (σὰρξ, flesh). Ana-membranous wings, as the wasp. sarca. Dropsy of the cellular membrane.

of the tunica vaginalis.

Hydrops pectoris. Dropsy of the chest; gens, a synonym of the constrictor medius; water on the chest.

47. Hydro-sulphurcts. Compounds of sulphuretted hydrogen with the salifiable [εἶέος, likeness). A hone situated between bases. See Kermes mineral.

48. Hydro-thionic (θεῖον, sulphur). hydro-sulphuric acid of M. Gay-Lussac.

gen with metals.

HYDROPS (νόρωψ, from, νόωρ, water, and &\$\psi\$, the aspect or appearance). Drop cured from the seeds and herbage of the sy; a morbid accumulation of water in a Hyoscvamus niger. cavity, or the cellular substance.

Hygienic agents. Under this term are included six things essential to health; percousis. The name given by M. Itard viz. air, aliment, exercise, excretions, to a morbidly acute sense of hearing. In sleep, and affections of the mind. The a case given by Dr. Good, this affection ancients applied to them the absurd singularly sympathized with the sense of name of non-naturals.

denotes the presence of moisture.

A humoral tumour. Hygroma. This term is applied to dropsy of the of sensation). Excessive sensibility. bursæ mucosæ, when the fluid is serous, colourless and limpid; when it is of a Super-purgation; excessive purgation. reddish colour, thick, and viscous, the 4. Hyper-chloric acid. An acid conaffection is called ganglion. The term taining a greater proportion of oxygen also denotes hygromatous tumour of the than the chloric acid. brain, or cysts containing a serous or albuminous fluid.

 Hygro-meter (μέτρον, a measure). An instrument for ascertaining the degree of cessive fulness of blood. moisture of the atmosphere. Whatever 7. Hyper-hydrosis (ίδρώς, sweat).

3. Hygro-metric water. That portion ephidrosis. of humidity which gases yield to deli-

quescent salts.

HYMEN (δυήν, a membrane). tured, are termed carunculæ myrtiformes, called chlorates. See Chlorine,

But for a fine preparation, the following may be used :-

1. The fine injection. Composed of brown spirit-varnish and white spirit-leve). The insertion, intentional or accivarnish, of each four parts; turpentine dental, of a healthy or morbid virus, as varnish, one part; and colouring matter, the vaccine or syphilitic, into the system. one part, or as much as is sufficient. A [INORGANIC (in, priv., organum, an little of this while hot is first thrown into organ). Without organs; or any parts for the arteries, into the minute branches of the performance of special functions, as

which it is to be forced by— minerals. See Organization.]

2. The coarse injection. Composed of INOSCULATION (in, and osculum, a

nish, and then the colouring matter sus-communication of trunks. pended in some oil of turpentine.

occiput. Hence,-

Inial. A term applied by Barclay to that aspect of the head which is towards Diplo-gangliata or Entomoïda, compristhe inion. The opposite aspect is called ing articulated animals with six feet, ant-inial.

INK. A liquor or pigment used for quire wings.

writing or printing.

1. Common ink, made by adding an attachment of a muscle to the part it infusion or decoction of the nut-gall to moves. Compare Origin. sulphate of iron, dissolved in water. Red alum. See Sympathetic ink.

linseed or nut oil and lamp-black.

4. Permanent ink. A solution of nitrate therapeutic agent. of silver, thickened with sap green or INSOLUBILITY (in, not, solvo, to cochineal; used for marking linen. The loose). A property, resulting from co-pounce liquid, with which the linen is hesion, by which a substance resists soprepared, is a solution of soda, boiled lution. with gum, or some animal mucilage. If potash be used, the ink will run.

INNATE. Growing upon any thing

ment.

nerve). The properties or functions of liquid of a thick consistence, the nervous system.

INNOMINATUS (in, priv., nomen, mits of the following significations:name). Nameless. Hence,-

wax; to which, when melted together, 2. Innominati nervi. A former name

1. The *ilium*, or haunch-bone. 2. The *ischium*, or hip-bone.

3. The os pubis, or share-bone.

INOCULATION (in, and oculus, an

bees-wax two parts, rosin one part, tur- little mouth). The union of vessels, or pentine-varnish one part, and colouring anastomosis: the latter term, however, is matter, q.s. To the bees wax and rosin sometimes used to designate union by melted together add the turpentine var-minute ramification; the former, a direct

INSA'NIA (in, priv., sanus, sound). I'NION (iviov, the nape of the neck; Insanity; mania; deranged intellect. from "s. ivôs, a sinew). The ridge of the The Latin term insanitas is applied to bodily, and not to mental, indisposition.

INSECTA. The second class of the which undergo metamorphosis and ac-

INSERTION (insero, to implant). The

INSOLATIO (in, and sol, the sun). [Inink is composed of Brazil wood, gum, and solation]. A term sometimes made use of to denote that exposure to the sun 2. Indian ink, made of lamp-black and which is made in order to promote the size, or animal glue, scented with musk chemical action of one substance upon or amber, and used in China for writing another. Also, a disease which arises with a brush, and painting.

3. Printers' ink, a black paint, made of the head, called coup-de-soleil. Lastly, it denotes exposure to the solar heat, as a

INSOMNIA (in, not, somnus, sleep). Sleeplessness, watching, lying awake.

INSPIRATION (inspiro, to inhale). by one end, as when the anther is at- That part of respiration in which the air tached by its base to the apex of the fila-is inhaled. Compare Expiration.

INSPISSATION (in, and spissatus, INNERVATION (in, and nervus, a thickened). The process of making a

INSTINCT. This convenient term ad-

I. The Instinctive Faculty; or that 1. Innominata arteria. The branch faculty which leads the duckling, ungiven off to the right by the arch of the taught, into the water; the beaver to

to incubate her eggs, &c.; and,— 2. The Instinctive Motions; or those

mediately through the nerves,-a part of with the other. the reflex function. The principal instinctive motions are,

1. The closure of the eyelids.
2. The act of sucking.
3. The act of sucking the hand.
4. The act of swallowing.
5. The closure of the glottis.
6. The action of the sphincters.

ing. All these phenomena accord with the of the moon.

definition, and take place even in the tion of the appropriate stimuli.

[INSUFFLATION (in, in, sufflo, to substances; thus, alkali is an intermediblow). The act of blowing a gas or va- ate between oil and water, forming pour into a cavity of the body, as when soap. tobacco smoke is injected into the rectum, or air blown into the lungs, &c.]

by non-conductors, so that its communi- tan, when they recur each third day. cation with other bodies is cut off.

entire). The most minute particles into between the increase and decrease of a which any substance, simple or com-disease. pound, can be divided, similar to each other, and to the substance of which they tween bones; as those between the meare parts. Thus, the smallest portion of tacarpal of the hand, and the metatarsal powdered marble is still marble; but if, bones of the foot. by chemical means, the calcium, the

cover). The covering of any part of the processes. body, as the cuticle, cutis, &c. The common integuments are the skin, with tween). A term applied to an organ the fat and cellular membrane adhering which occupies the interstices of contiguto it; also, particular membranes, which ous cells, as the nterus, the bladder, &c. invest certain parts of the body, are

INTENSITY. A term denoting the processes of the lumbar vertebræ. degree to which a body is electrically excited.

[INTENTION. See Union.]

INTER. A Latin preposition, signifying between, or denoting intervals.

1. Inter-articular. A designation of cartilages which lie within joints, as that the fibro-cartilage between the vertebræ; of the jaw; and of certain ligaments, as to ligaments, &c. the ligamentum teres within the acetabulum, &c.

build its hut; the bee its comb; the hen the septum between the auricles of the heart, in the fætus.

The name of a 3. Inter-clavicular. involuntary actions which are excited ligament connecting the one clavicle

4. Inter-costales. The name of two sets of muscles between the ribs-the external and the internal-which have been compared, from their passing in contrary directions, to St. Andrew's cross.

5. Inter-current. Applied to fevers or other diseases which occur sporadically

in the midst of an epidemic.

6. Inter-lunius morbus (luna, the moon). 7. Inspiration, as an involuntary act. 6. Inter-lunius morbus (luna, the moon).
8. The acts of sneezing; of vomit- Epilepsy; so called from its being supposed to affect persons born in the wane

7. Inter-mediate (medius, middle). A anencephalous child, on the due applica- term applied to a third substance, employed for combining together two other

8. Inter-mittent (mitto, to send). term applied to Ague, or fever recurring INSULATION (insula, an island). A at intervals; it is called quotidian, when term applied to a body containing a the paroxysms recur daily; tertian, when quantity of electric fluid, and surrounded they recur each second day; and quar-

9. Inter-nuntii dies (nuntius, a mes-INTEGRAL PARTICLES" (integer, senger). Critical days, or such as occur

LONGISSÍMUS OCULI. A name

Brevissimus.

term applied to two sinuses of the dura region.

the back of the esophagus, which sup-the cellular substance of the loins, be-ports and bends the neck. The muscle hind the peritonæum, and descends in between the spinous processes of the ver- the course of the psoas muscle. tebræ and the angle of the ribs is called

longissimus dorsi.

LORDO'SIS (λορδός, curved). curvation of the head and shoulders, or resemblance to the earth-worm. anterior crookedness. Posterior incurvathe lateral form, hybosis.

LORI'CA. Literally, a coat of mail, testines. A kind of lute, with which vessels are coated before they are exposed to the worm of Dr. Heberden, so called from its fire. Hence the term lorication in che- joints, when broken, presenting the apmistry, for coating. See Lute.

LOTIO. A lotion, or wash; a liquid remedy, intended for external applical name of silver. This generic term comprehends

collyria, &c.

LOUSINESS. Malis pediculi. Anl lus.

LOXA BARK. The Pale Crown bark,

θρον, a joint). An obliquity of a joint, ver. without spasm or luxation, as varus, val-

LOXIA (λοξός, twisted). Caput cbsti-

gray substance situated between the pum. Wry-neck: a distortion of the head

Trochisci. These are LOZENGES. composed of fine powders, mixed with A spikelet, or partial mucilage and sugar, (or adulterated with spike; a portion of the inflorescence of pipe-clay,) rolled into cakes, cut into shapes, and dried in a stove.

LUES VENEREA. Literally, the plague of Venus, or venereal disease. Syphilis; a disease also called morbus Aphrodisius, morbus Gallieus, morbus Indicus, morbus Neapolitanus, &c.

LUGOL'S SOLUTION. A liquid containing 20 grains of iodine, and 30 grains of iodide of potassium in one ounce of

water.

LUMBA'GO (lumbus, the loins).

LUMBI. The loins; the inferior part

of the back.

 Lumbar. The designation of nerves, given to the obliquus superior, from its arterics, veins, &c., belonging to the rebeing the longest muscle of the eye. See gion of the loins. Hence, also, the term lumbo-abdominal, or lumbar plexus; the LONGITUDINAL (longus, long). A lumbo-sacral nerves, and the lumbo-dorsal

Lumbar Abscess. Psoas abscess. A LONGUS COLLI. A long muscle at chronic collection of pus, which forms in

LUMBRI'CALES (lumbricus, an earthworm). The name of four muscles of Pro- the hand and foot; so called from their

LUMBRI'CUS (lubricus, slippery). The tion was formerly called cyrtosis; and earth-worm. Ascaris lumbricoides is the long and round worm, found in the in-

Lumbricus cucurbitinus. The Gourd-

pearance of gourd-seeds.

LUNA. The Moon; the alchemical

LUNA CORNEA. Horn silver. The embrocations, fomentations, liniments, chloride of silver, so named from its horn-like appearance and consistence.

LUNAFIXATA. Literally, fixed affection in which the cuticle is infested moon; the name given by the famous with lice; depositing their nits or eggs empiric Luddemann to the cadmia of at the roots of the hair, accompanied Gaubius, a remedy formerly much used with troublesome itching. See Pedicu- in clonic affections, and consisting of oxide, or the flowers of zinc.

LUNAR CAUSTIC (luna, the moon; the produce of the Cinchona Condaminea. the old alchemical name for silver). The LOXARTHRUS (λοξός, twisted, "αρ-Argenti nitras, or fused nitrate of sil-

[LUNATE (luna, the moon). Crescentiform, or semi-lunar.]

LUNATIC (luna, the moon).

who is affected by the changes of the The pharmaceutical name for the fine moon, or is periodically derauged.

moon). A suppression of urine, which and other species of the same genus. It returns monthly, or with the moon.

ed in the thorax. The right lung is divid- been employed to prevent pills from aded into three lobes; the left, into two; each hering. of them is subdivided into lobules, or small lobes. See Pulmo and Respiration.

of the nail.

LUPIA. Willan molluscum.

Ives to the active principle of the Hu-and drunk ad libitum.] mulus Lupulus, or the hop. [It occurs in] the form of a yellow powder, on the sur-alkaline substances, used in the arts. face of the scales of the fruit. It is tonic given in the form of pills.]

LUPUS (Lat. a wolf). Noli me tangere. A slow tubercular affection, or so called from its resemblance to water. curring especially about the face, com- LYMPH-CATARACT. The most fre-

the flesh, like a wolf.

A term applied by Beer to a distortion tion. of the eyeball, which resembles squinting, but differs from it in the want of nute tubes which pervade every part of power to move the affected eye when the body, which they absorb, or take up, the other is closed. It occurs as a symp- in the form of lymph. They are sometom in amaurosis.

LUTE. A compound paste, made of oil, otherwise called drying oil, formed is laid over the fire. into a mass like putty.

LUTEOLINE. Dvers' Rocket, Yellow Weed or Weld.

LUXATION (luxo, to put out of joint). of a lyre. Dislocation; or the removal of the articular surfaces of bones out of their pro-plied to a leaf which has several sinuses per situation. See Dislocation.

LYCANTHROPIA (λύκος, a wolf, size from above downwards.] ανθρωπος, a man). Lupina insania. Wolfmadness, called cucubuth by Avicenna, tasia lyssa; a term applied by Dr. Good in which men fancy themselves to be to hydrophobia. wolves, bears, &c. In Pliny's time this inctamorphosis appears to have been reciprocal: he says, "homines interdum principally used in diarrhea and dysenlupos fieri, et contra."

LYCOPODIUM (λνκος, a wolf, πους,

powder obtained from the capsules of LUNATICA ISCHURIA (luna, the the Lycopodium clavatum or club-moss is used as an absorbent application to ex-LUNGS. Two vesicular organs, situate corrated surfaces, and in pharmacy it has

LYCOPUS VIRGINICUS. Weed. An indigenous, Labiate plant, LUNULA (dim. of luna, the moon), said to possess mild narcotic properties, The white semi-lunar mark at the base and to have been used with advantage in incipient phthisis and hemorrhage Wen; a tumour, termed by from the lungs. It is given in the form of infusion, made by macerating an ounce LUPULIN. The name given by Dr. of the herb in a pint of boiling water,

LYE. A solution of potass, or other

LYMPH (lympha, water). A colonrand moderately narcotic. The dose is less liquid which circulates in the lymfrom gr. vj. to gr. xij., and is usually phatics. The liquid which moistens the surface of cellular membrane.

Lumph of Plants. The unelaborated sap,

monly ending in ragged ulcerations of quent form of spurious cataract; so the nose, cheeks, forehead, eyelids, and named by Beer, who observes, that only lips. It is so called from its eating away this species deserves the name of membranous, as alone consisting of an adven-LUSCITAS (luscus, blind of one eye). titious membrane, formed by inflamma-

LYMPHATICS (lympha, water), Mitimes called ductus aquosi.

LYNCURIUM. This is supposed to clay, sand, and other materials, for clos- have been the ancient name of tourmaing the joinings of retorts, receivers, &c., lin. It possesses the property of attracting in chemical experiments, in order to ren- light bodies, when heated. The Dutch, der them air-tight. Fat lute is made of in Ceylon, call it aschentrikker, from its powdered pipe-clay and boiled linseed attracting the ashes, when a portion of it

LYRA (alyre). Psalterium. The name The colouring prin-given to that part of the fornix, which ciple of Reseda luteola, commonly called presents the appearance of some white lines, somewhat resembling the strings

[Lyrate. Lyre-shaped; in botany apon each side, gradually diminishing in

LYSSA (λύσσα, canine madness). En-

LYTHRUM SALICARIA. Spiked Purple Loosetrife, an indigenous plant, terv.

LYTTA. The former name of the a foot). A genus of cryptogamous plants. Cantharis vesicatoria, or blistering beetle.

M

nifications in prescriptions:-1. Manipulus, a handful; when herbs,

flowers, chips, &c., are ordered.

2. Misce, mix; thus, m. f. haust. signifies, mix and let a draught be made.

Mensurâ, by measure.

MACE. A thin, flat, membranous substance which envelopes the nutmeg; it scribed the Pityriasis versicolor, or varieis an expansion of the funiculus, and is gated dandriff. termed, in botany, an arillus.

by steeping). The steeping of a body for its fugitive character. some time in cold or warm water.

MACHAON. The name of an ancient physician, said to be a son of Æsculapius; hence, particular inventions have lashes. been dignified with his name, as asclepias Machaonis, a collyrium described by Scribonius; and medicine in general is sometimes called ars Machaonia.

MACIES (maceo, to be lean). Wasting,

atrophy, or emaciation.

potassa.

MACROCEPHALOUS (μακρός, large, κεφαλή, the head). Large-headed; a term applied by Richard to those Dicotyledonous embryos, in which the two cotyledons cohere, as in horse-chestnut. Gærtner terms these embryos pseudo-monocotyledonous.

Macropodal (μακρός, large, ποῦς, ποδός, a foot). Large-footed; a term applied by Richard to a modification of the monocotyledonous embryo, in which the radicle presents an unusual protuberance, as in wheat.

MACROCOSM (μακρός, large, κόσμος, world). Large world; a term employed as synonymous with universe; while microcosm, or little world, has been used man.

MACULA. A spot. A small patch or speck of the cornea. See Opacity.

spot, or nucleus germinativus of Wagner: dregs, or sediment: a kind of salve, a spot found in the germinal vesicle of the ovum, consisting of one or more somewhat opaque corpuscules, and possibly the analogue of the nucleus of for- mony, mixed by fusion. mative cells.

This letter has the following sig-[of an alteration of the natural texture of the part. Maculæ have been distinguished into ephelis, sun-burn or freckles; nævus, or mother-spots; spilus, or thickening and discoloration of the rete mucosum; and moles.

 Maculæ hepaticæ. Hepatic spots; the term under which Sennertus de-

 Maculæ volaticæ. Flying spots; a MACERATION (macero, to make soft designation of the Erythema fugax, from

[MADAR. See Mudar.]

MADARO'SIS (μαδάω, to be bald). A defect or loss of the eyebrows or eye-

MADDER. The root of the Rubia Tinctorum; used in dyeing the Adrianople or Turkey Red, and other colours. It is distinguished, in commerce, according to its quality, by the terms crop, ombro, gamene, and mull, of which the MACQUER'S SALT. Neutral arse-first is the best. Two colourless acids nical salt of Macquer; super-arseniate of have been noticed in madder, viz. the madderic and the rubiacic acids. See Alizarine.

MADREPORE. A species of coral; a zoophyte, consisting of carbonate of lime, and a little animal membranaceous substance.

MAGISTERY (magister, a master). A term formerly applied to almost all precipitates, supposed to be subtle and masteily preparations; but at present it is applied only to a few, as the magistery of bismuth, or the sub-nitrate.

Magisterium Argenti. The alchemical name of the nitras argenti, also called crystalli Dianæ; when fused, it was

termed lapis infernalis.

MAGISTRAL (magistralis, masterly). A term applied to medicines which are by some philosophers as a designation of prepared extemporaneously, and which were therefore considered as masterly preparations.

MAGMA (μάσσομαι, to knead dough). I. Macula germinativa. 'The germinal Literally, a kneaded or squeezed mass;

> MAGNES ARSENICALIS, A corrosive preparation of equal parts of sulphur, white arsenic, and common anti-

MAGNESIA (magnes, a magnet, or 2. Macula. Spots; a permanent dis loadstone). An alkaline earth, having a coloration of the skin, generally the result metallic base called magnesium. The

term magnesia was originally employed with one end pointing about 24½° west denominate magnesia was first sold as a panacea, by a canon at Rome, in the beginning of the seventeenth century, un

by Thiery to scarlatina.

some parts of India to vellow fever.

Elephantiasis, from its being commonly bourhood of Rome, especially about the ascribed to the heat of the sun's rays.

4. Mal des ardens. One of the designations of a fatal epidemic disease, which formed by malic acid with alkaline and prevailed extensively in the early and magnesian bases. dark ages, as the sequel of war and famine. It is placed by Sauvages under the natural form of an organ. the head of Erysipelas pestilens; and by termed-Sagar under the genus necrosis.

illa, as ala from axilla. In classic writers, cases. genæ is properly the part of the face under the eyelids, while mala denotes &c., of parts in the heart, constituting the the cheeks, the round and lively-red part qualitative malformations of Meckel of the face; also the jaw, the cheek-

MALACENCEPHALON (μαλακός, soft, ἐγκέφαλος, the brain). A term applied by Dr. Craigie to simple diminished consistence of the brain, without change apples, but generally prepared from the of structure.

MALACHITE. Green Bice. A beautiful native green carbonate of copper.

MALACIA (μαλακία, softness). Deprayed appetite. The desire for one coat of the pomegranate. particular kind of food, and disgust for of mal d'estomac, or dirt-eating.

MALACOSTEON (μαλακός, soft, όστέον, a bone). Mollities ossium. Softness

of the bones.

MALACTINIA (μαλακός, soft). third class of the Cyclo-neura or Radiata, consisting of soft aquatic animals, emitting an acid secretion from their surface, which is capable of irritating and inflaming the human skin, like the stinging of a nettle; hence the name acalephæ, or nettles, has been commonly given to this class.

MALAGMA (μαλάσσω, to soften). Α term synonymous with cataplasma, and so called from its softening property.

MALAGUETTĂ PEPPER. Seeds resembling, if not identical with, the grains of paradise, and referred to the Amomum Grana Paradisi. Roscoe, however, affirms that they are the produce of inches; and the thickness of each leaf of A. melegueta.

MALAMBO BARK. Matias Bark, inch. The bark of a tree said to be procured

MALARIA (mala aria, bad air, Ital.). which strike the knee like a hammer. A term generally employed to designate!

MAL (malus, evil). The French term certain effluvia or emanations from ramalady or disease. marshy ground. Hence the term marsh-

1. Mal de la Rosa. The name given fever, in Europe; jungle-fever, in India.

The mularia of Campagna is the name 2. Mal de Siam. A name given in of an endemic intermittent, arising from the aria cattiva, as it is called, exhaled 3. Mat del sole. A name of the Italian from decaying vegetables in the neigh-Pontine marshes.

MALATES. Neutral and acid salts

MALFORMATION. A deviation from

 Defective, when an organ is entirely MALA. A term contracted from max-deficient, as the heart, &c., in acardiac

2. Irregular, as in the misplacement,

Superfluous, when consisting of excessive developement of an organ, as in the case of supernumerary auricles, &c.

MALIC ACID (μηλον, Dor. μαλον, malum, an apple). An acid existing in berries of the Sorbus aucuparia, or moun-By dry distillation, it yields tain ash. another acid, termed the maleic.

MALICORIUM. The rind or external

MALIGNANT. Malignus. all other kinds. It may assume the form applied to diseases in which the symptoms appear fatal, as in typhus, cholera, cynanche, &c.

[MALINGERER. A term applied to soldiers who teign disease.]

MALIS (μάλις). Maliasmus. taneous disease, produced by parasitic worms, formerly called dodders. The different species of vermination are-

Malis pediculi, or lousiness.

2. Malis pulicis, or flea-bite.

3. Malis acari, or tick-bite.

4. Malis filariæ, or guinea-worm.

Malis æstri, or gadfly-bite. 6. Malis gordii, or hair-worm,

MALLEABILITY (malleus, a ham-mer). A property of some metals, by which they are beaten out in plates, or leaves, by a hammer. Gold leaf, for instance, is so thin, that less than five grains will cover a surface of 2721 square does not exceed the $\frac{1}{282020}$ part of an

tamour).

the general principles of organization .-

MERUS. merum vinum, neat wine, &c. Hence, when merum is said of wine, vinum is understood,—"curare genium mero;" hence also "merobibus," one who drinks

wine without water

MESEMBRYANTHEMUM CRYS-TALLINUM. Ice plant. A native of which seeds are sometimes enveloped. the south of Europe; the expressed juice of it is considered demulcent and dinretic, and has been given in diseases gives origin to the second pair of legs, &c. of the mucous membranes of the pulmonary and urinary organs, and in drop-in composition this preposition denotes

MESITE. A liquid existing in pyroxylic spirit, and produced in the distilla-lobtained, mixed with acetone, in distiltion of wood. Mesiten is a similar pro-ling sugar with quicklime.

duct of the same process.

MESITYLENE. produced by distilling pyro-acetic spirit (acetone) with fuming sulphuric acid.

MESMERISM. Animal magnetism,

a system introduced by Mesmer.

MESOS (μέσος). Medius. The Greek term for middle, or mediate, or that which is situated between others.

1. Mes-araic (doard, the small intestines). A term synonymous with mesen-

- Mes-entery (ἔντερα, the bowels). The membrane which connects the small intestines and the posterior wall of the abdomen.
- Mes-enteritis. Inflammation of the mesentery.

when fleshy, it is called sarcocarp.

 Meso-cephalon (κεφαλή, the head). The name given by Chaussier to the pons rally, a change of form. A term applied

Varolii.

6. Meso-cacum. That part of the peritonæum which embraces the cæcum and

its appendix.

part of the mesentery which connects alcohol and carbonic acid. the transverse colon and the posterior wall of the abdomen.

mach, observed in the earliest stage of sidence of a similar disorder of a limb

Meso-lobe. Chaussier's designation of the corpus callosum, or the maxima

 Meso-phlæum (φλοιός, bark). MERORGANIZATION (μέρος, a part). portion of the bark of plants which lies Organization in part; a modification of between the epiphlocum and the endophlœum or liber.

> Meso-phyllum (φύλλον, a leaf). The Mere, pure; unmixed, as cellular substance of the leaves of plants;

also called diachyma and diploe,

That part of the Meso-rectum. peritonæum which connects the rectum with the front of the sacrum.

 Meso-sperm (σπέρμα, seed). middle one of the three membranes by

 Meso-thorax (θώραξ, the chest). That part of the chest in insects which

META (μετά, prep.). After; with;

change, transference, &c.

1. Met-acetone. A combustible liquid,

2. Met-aldehyde. A product of the A light oily liquid, condensation of the elements of alde-

hyde.

 Meta-carpus (καρπὸς, the wrist). That part of the hand which is situated between the carpus and the fingers.

 Meta-meric (μέρος, a part). applied to compounds in which the ultimate elements are the same as in other well-known combinations, but are considered to be arranged in a different way: thus, oxygen, hydrogen, sulphur, and a metal, may be considered as combined in the form of sulphuretted hydrogen and a metallic oxide, or of water (consisting of oxygen and hydrogen) and a metallic sulphuret. See Isomeric and Polymeric.

5. Meta-morphopsia (μεταμόρφωσις, a Meso-carp (καρπός, fruit). The in-change of form, δψις, vision). A species termediate part of the pericarp of fruits; of amaurosis, in which objects appear

confused or distorted.

 Meta-morphosis (μορφή, form). by Liebig to those chemical actions in which a given compound is caused, by the presence of a peculiar substance, to resolve itself into two or more compounds; 7. Meso-colon (κῶλον, the colon). That as sugar, by the presence of yeast, into

 Meta-stasis (μεθίστημι, to transfer). Literally, a removal from one place to 8. Meso-gastrium (γαστηρ, the stomach). another. Generally, the supervention of A kind of suspensory band of the sto- an affection of a new organ, on the subor organ primarily affected; as the cessation of rheumatism, followed by pericarditis, &c.

8. Meta-tarsus (ταρσός, the tarsus). That 21. Chromium . Vauquelin . 1797, part of the foot which is situated between 22. Columbium . Hatchett . . . 1802. the tarsus and the toes.

 Meta-thorax (θώραζ, the chest). The 24. Rhodium, third and last segment of the thorax, in 25. Iridium Descotils,&c. 1803.

METALS (μέταλλα). A class of compact, heavy, opaque bodies, distinguished, 23. Potassium in different degrees, by the following gene- 29. Sodium . . . ral properties:-

1. Malleability, by which they admit 31. Strontium of being hammered out into thin plates 32. Calcium... Stromeyer.. 1818. all the metals. being extended by the rolling-press, it is 35. Selenium . . . Berzelius,&c. 1818. called laminable.

2. Ductility, by which they admit of 37. Zirconium. 2. Dictitity, by Which and San Aleminium, being drawn out into wire. All the mallable metals possess this property.

3. Fusibility, or the capacity of being 40. Yttrium ... Smelted by heat. The point of fusion 41. Thorium ... Berzelius... 1829. varies considerably in the different me- 42. Magnesium . Bussy, &c... 1829. tals, though they are all solid, except mercury, at common temperatures.

4. Tenacity, by which they are capable of supporting considerable weight with-

out breaking.

Elasticity and hardness; properties which adapt them for exciting sound,

Crystalline texture; thus, iron is fibrous; zinc, lamellated, steel, granu-lar; others are procured in crystals, as gold, silver, &c.; when they crystallize, they always assume the figure of a cube, the regular octohedron, or some form allied to it.

Table of the Metals.

The Metals are here arranged according to the order in which they have been discovered, with the names of the persons who discovered, or first described them.

1.	Gold)	Known to the ancients
2.	Silver	Gold and silver are term

	DOLL 1	a '	1001

20. Titanium . . . Gregor 1791.

23. Palladium, 24. Rhodium, Wollaston . . 1803.

26. Osmium . . . S. Tennant, 1803.

30. Barium .. Davy 1807.

When a metal admits of 34. Lithium Arfwedson . 1818.

36. Silicium Berzelius . . 1824.

II. Classes of the Metals.

1. Metallic bases of the alkalies, viz. potassium, sodium, and lithium. These powerfully attract oxygen; the oxides are termed alkalies; and the metallic bases, alkaline or alkaligenous metals.

2. Metallic bases of the alkaline earths, viz. barium, stronium, calcium, and magnesium. These also powerfully attract oxygen, and their oxides are termed alkaline earths.

3. Metallie bases of the Earths, viz. ałuminium, zirconium, glucinium, silicium, vitrium, and thorium. The oxides of these metals are the pure earths.

4. Metals yielding oxides, which are neutral salifiable bases, viz. gold, silver, mercury, copper, lead, iron, tin, platinum, palladium, nickel, cadmium, zinc, bismuth, antimony, cobalt, and manganese.

5. Metals which are acidifiable, by combination with oxygen, viz. tellurium, arsenic, chromium, molybdenum, tungsten, columbium, and selenium. Of the oxides of the rest, little is known.

6. Metals magnetic, viz. iron, nickel, and cobalt; chromium has also been affirmed to be magnetic.

11I. Terms connected with Metals.

 Metals are termed native, when found in an uncombined form; mineralized, when combined with other bodies; compounds of two or more metals, except mercury, are called alloys, and possess the characteristic properties of pure

metals; those of mercury with other me-jor relaxation; hence, all medicines were

tals are called amalgams.

2. The termination in uret denotes dies. combinations of the simple non-metallic elements, either with one another, with dical, or basyle, of wood spirit. a metal, or with a metallic oxide; thus sulph-uret and carb-uret of iron signify compounds of sulphur and carbon with

3. The result of the oxidation of metals, when heated in the air, was formerly distillation of wood. called a calx, and the process of forming deflagrated; when the oxides are re-middle ages. duced to the metallic state, they are said to suffer reduction. Metals are the best sure of length, equivalent to 39.371, or reflectors of caloric, and the worst radia-

tal, γράφω, to describe). That branch of science which treats of metals.

METALLOID (μέταλλον, a metal, εἶδος, metals obtained from the fixed alkalies rhage, and some of the earths. They are now ME called metallic.

METALLURGY (μέταλλον, a metal, έργον, work). The separation of metals os uteri. from their ores. It comprises the several operations of assaying, refining, smelting, &c.

Distention of the abdomen by gas.

from the atmosphere; such was the an-|from marshy grounds. cile, or shield of Mars, which fell in the nickel.

METEOROLOGY (μετέωρα, meteors; then called Muscovy glass. from μετά, and αίωρέω, to suspend; λογος, a description). The doctrine of meteors, κόσμος, order). A triple salt, obtained or the study of the variable phenomena by mixing equal parts of the phosphates of the atmosphere.

or stupor, as opiates.

NARCOTINE (νάρκη, stupor). A crystalline substance derived from opium, formerly called salt of Derosne.

NARCOTISM (νάρκη, stupor). [Narcosis.] A state of unnatural sleep, induced by the effect of narcotic substances.

NAR DOSTACHYS JATAMANSI. An Indian plant of the order Valerianaceæ, the root of which appears to be the spikenard of the ancients.

NARIS. Cava naris. The nostril, the

hole of the nasus, or nose.

NASCENT STATE (nascor, to be born). A term applied to the state of gases, ness; a slight form of opacity. at the moment of their generation, before

and visual obstruction. The N. palustre the blood.] and N. amphibium possess the same virtues as the N. officinale.]

the external part of the nose.

 Nasal fossæ. 'Γwo irregular, com- πέω, to examine). Relating to post-morpressed cavities, extending backwards tem examination, or autopsia. from the nose to the pharynx, and constituting the internal part of the nose.

2. Nasat duct. A short canal leading from the lacrymal sac to the inferior

meatus of the nose.

3. Alæ nasi. The two movable sides,

or wings, of the nose.

[NATATION (nato, to swim). The act of swimming, or of floating and mov-lis termeding in the water by the action of the muscles of locomotion.

NATES. The buttocks. The name healthy. of the upper pair of the tubercula quadrigemina of the brain; the lower pair the same bone, or several distinct bones, is called the testes.

NATRIUM. A term formerly used to health is bad, &c.

designate sodium.

NAUCLEA GAMBIR. Dr. Pereira considers this gambir not to NAPLES YELLOW. A colour pre-form any of the kinos of the shops, but

in commerce. See Kino.

An old Latin term ap-NAUCUM. base existing in opium in a very small plied by botanists to the exterior coat of the drupe; it is soft and fleshy, and sepa-[NARCISSUS PSEUDO-NARCIS-|rable from the interior, hard, and bony SUS. Daffodil. A well-known plant, the coat, which is called the endocarpium, or to seeds which have a very large hilum, Hyp- as that of the horse-chestnut.

NAUSEA (sea-sickness, from ναῦς, a ship). Sickness of the stomach; loathing; tendency to reject, but without re-

gurgitation.

[Nauseants. Medicines which excite

nausea.]

NAVICULARE OS (navicula, dim. of navis, a boat). A boat-shaped bone of the carpus, and of the tarsus. The term navicular is applied in botany to the glumes of grasses, owing to their boatshaped appearance. It signifies the same as the term carinated, or keeled. See

Keel.

NEBULA. A cloud. Haziness, or dul-

[NECRÆMIA (νεκρος, death, άιμα, they have acquired the repulsive power, blood). Death beginning with the blood, INASTURTIUM OFFICINALE. Wa- a term given by Dr. C. J. B. Williams to ter-cress. A cruciferous plant, eaten as those fatal cases in which the first and a salad, and esteemed useful in scurvy most remarkable change is exhibited in

[NECROPHOBIA (νεκρος, death, φοβος, fear). An exaggerated fear of death, a NASUS. The nose, or organ of smell; common symptom of hypochondriasis.]

NECROSCOPICAL (νεκρός, dead, σκο-

NECRO'SIS (νεκρόω, to mortify). Literally, mortification; it is confined to that affection of the hones, and is the consequence either of an unfavourable termination of inflammation of the bone in a bad constitution, or of its vascular supply being cut off by the destruction of its periosteum or medullary membrane. It

 Simple, when it is confined to one bone, the patient being in other respects

Compound, when several parts of are affected at the same time; when the

3. Necrosis ustilaginea. The name

given by Sauvages to that species of mortification which arises from the use of grain infected by "ustilago" or blight.

NECTARY. That part of a flower which secretes nectur, or honey. The to the external rectus of the eye. term has been vaguely applied to several parts which have no such function.

applied to the spermatozoa, or organized auditory. animals, found in the seminal reservoirs of the loligo, as observed by Needham.

NEGRÖ CACHEXY. Mal d'estomac of the French. A propensity for eating dirt, peculiar to the natives of the West Indies and Africa, and probably similar

to chlorosis.

NEPENTHE (νη, neg., πενθος, grief). The ancient name of a drug, probably opium, mentioned in Homer. Hence the old pharmacopæia termed the common opiate pills nepenthes opiatum.

[NEPETHA CATARIA. Catnip. Ca-|glossal, terminating in the tongue. taria. Ph. U. S. A Labiate plant, an infusion of which is used in domestic

hysteria, &c.]

NEPHROS (νεφρός). Ren. A kidney; the secreting organ of the urine.

 Nephr-algia (ἄλγος, pain). the kidneys, from calculus, or gravel.

Nephr-itic. Belonging to the kidney; a medicine which acts on the kidney.

3. Nephr-itis. Inflammation or other dorsal and the first lumbar vertebra. disease of the kidney.

account or description of the kidneys.

 Nephro-tomy (τομή, section). operation of cutting a stone out of the kidney

NEROLI OIL. Oleum Aurantii. procured from the flowers of the Citrus of the coccyx. Aurantium, or sweet orange.

NERVES (nervus, a string). cords arising from the brain or the spinal marrow, and distributed to every part of the system.

I. Cerebral Nerves.

1. First pair, or olfactory nerves, expanding on the membrane of the nose.

2. Second pair, or optic nerves, terminating at the middle of the retina.

3. Third pair, or oculo-motory nerves, distributed to the muscles of the eye.

4. Fourth pair, or nervi pathetici seu trochleares, distributed to the superior oblique muscle of the eye.

head and face. It includes—

nerve of the face; and

2. The small, aganglionic, or masticatory portion, the motor nerve of the temporal, masseter, &c.

Sixth pair, or abducens, distributed

7. Seventh pair, consisting of the portio dura, facial, or the respiratory of the NEEDHAMIANA CORPORA. A term face, of Bell; and the portio mollis, or

Eighth pair, or grand respiratory

nerve, consisting of-

 The glosso-pharyngeal, penetrating into the back of the tongue;

2. The pneumo-gastric, nervi vagi, par vagum, or middle sympatheiic; and

3. The spinal accessory, nervus ad par vagum accessorius, or superior respiratory of the trunk, of Bell.

9. Ninth pair, sublingual, or hypo-

II. Spinal Nerves.

1. Cervical nerves. Eight pairs; the practice, in amenorrhœa, infantile colic, first passing between the occipital bone and atlas, and termed sub-occipital, or tenth nerve of the head; the last passing between the seventh cervical vertebra Pain of and the first dorsal.

Twelve pairs; the 2. Dorsal nerves. first issuing between the first two dorsal vertebræ, the last between the twelfth

3. Lumbar nerves. Five pairs; the Nephro-logy (λόγος, an account). An first issuing between the first two vertebræ of the loins, the last between the

The last vertebra and the sacrum.

4. Sacral nerves. Generally six pairs; the first issuing by the upper sacral holes, Oil the last by the notches at the upper part

III. Respiratory Nerves, arising from the Medulla Oblongata.

1. The fourth pair, or pathetici.
2. The portio dura of the seventh.
3. The glosso-pharyngeal nerve.
4. The par vagum, and accessorius.
5. The phrenic nerve.

5. The phrenic nerve. 6. The external respiratory.

7. The fifth, and certain spinal nerves, with the par vagum, should be distinguished as exciters of respiration, the rest heing motors.—Dr. M. Hall.

Sympathetic Nerve.

A collection of ganglia and branches connected with the sixth nerve, the 5. Fifth pair, trigemini, or trifacial Vidian portion of the fifth, the portion nerves, the grand sensitive nerves of the dura, the eighth, ninth, and all the spinal nerves. It is, in fact, a collection 1. The large, ganglionic, or trifacial of branches from almost every nerve in portion, the sentient and organic the frame, which join it at the adjacent ganglia.

NERVINE (nervinus, from nervus, a or any local disease; the second class of dics, &c.

[NERVOUS, Belonging, or relating] to the nerves; strong, vigorous; excess- tassæ Citratis. Ph. U. S. This is best ive irritability or mobility of the nervous prepared by saturating fresh lemon juice system.

CENANTHE CROCATA. Hemlock-of brick, from their being sometimes obdropwort, or Dead-tongue; the most tained in this state, by steeping hot brick energetic of the narcotico-acrid Umbet-lin oil, and submitting it to distillation. liferous plants. It has been called five- They are vegetable or animal. fingered root.

ŒNANTHIC ETHER (olvos, wine, An oily liquid, which ἄνθος, flower). gives the characteristic odour to all wines.

Enanthic acid. An acid found in the foregoing compound, in combination with ether.

ŒNANTHYLIC ACID. An acid procured by the action of nitric acid on castor oil.

infantile eruptions, in tetter, &c.]

stomach.

1. Œsophageal cords. Two elongated cords, formed of the pneumogastric nerves, which descend along the œsophagus.

Œsophageal glands. A name some-

œsophagus.

 Œsophago-tomy (τομη, section). The operation of cutting into the esophagus. for the purpose of extracting any foreign body.

Gad-fly; a variety of ascaris, the larvæ pared by expression. of which, called bots, are found convoluted in the mucus and faces of man. but more generally in those of the horse.

OFFICINAL (officina, a shop). A term applied to any medicines directed by the

colleges to be kept in the shops,

OFFSET. Propagulum. branch of certain herbaceous plants, which is terminated by a tuft of leaves, and is capable of taking root when sepa- 2-celled: seeds pendulous. rated from the parent plant, as in Houseleek. It differs little from the runner,

OIL (oleum, from olea, the olive). The liquors, which give a greasy stain to constitutes the olive of commerce, and in paper. These have been divided into the ripe state yields olive oil.

the fixed oils and the volatile oils.

1. Fixed Oils. These are comparatively which contains, or resembles, oil. fixed in the fire, and give a permanently sopher's oil was formerly given to them tuting the elbow, or head of the ulna. when acrid and empyreumatic; and oil OLEFIANT GAS (oleum, oil, fio, to

I. Vegetable Oils; obtained from vegetables by expression, with or without heat: in the latter case they are termed cold-drawn. Some of them lose their limpidity on exposure to the air, and are hence called drying

Animal Oils; obtained from animals, by boiling. They are solid or fluid.

Volatile Oils. These are so called [ŒNOTHERA BIENNIS. Tree Prim-from their evaporating, or flying off. rose, Evening Primrose, Scabish, Scabi-when exposed to the air; they are also An indigenous plant, the bark of called essential, from their constituting which is mucilaginous and astringent, the chief ingredient, or essence, of the and a decoction of it has been benefi-vegetable from which they are obtained; cially employed by Dr. R. E. Griffith in the other parts being considered as an

useless caput mortuum.
OIL OF SPIKENARD. Grass oil of ŒSOPHAGUS (οἴω, οἴόω, το carry, OIL OF SPIKENARD. Grass oil of φάγω, to eat). The carrier of food; the Namur; a volatile oil, yielded by the gullet; a musculo-membranous canal, Andropogon calamus aromaticus. It is extending from the lower part of the not the spikenard of the ancients, which pharynx to the superior orifice of the Professor Royle conceives to be the Nardostachys Jalamansi. The name of the oil of spikenard is, therefore, incorrect.

OIL OF WINE. Heavy oil of wine. The Oleum æthereum of the pharmaco-

pœia. See Etherole.

OLD OIL. The name given by watchtimes given to the mucous follicles of the makers to olive oil, after it has been

purified and reduced to limpidity.

OLEA DESTILLATA. Distilled, volatile, or essential oils. The British pharmacopæia directs these to be prepared by distillation only; the French ŒSTRUS (οἶστρος). The Breeze, or Codex orders several of them to be pre-

Olea expressa. Expressed or fixed oils. These are obtained from animal matter by fusion, and from vegetables by expression, or decoction with water.

OLEACEÆ. The Olive tribe of dicotyledonous plants. Trees or shrubs with A short leaves opposite; flowers regular, monopetalous, hermaphrodite, or directions; stamens two; ovarium simple, superior,

Olea Europæa. The Enropean Olive, the products of which are a resiniform exudation, called lecca gum; and a drudesignation of a number of unctuous paceous fruit, which in the unripe state

OLEAGINOUS (oleum, oil).

OLECRANON (διλένη, the ulna, κράνον, greasy stain to paper. The term philo the head). The large apophysis, consti-

become). A compound gas consisting of indefinite. It is contrasted by the prefix radical acetyl with hydrogen. Its name we have oligo-spermous and poly-sperwas derived from its forming an oily mous fruits.

substance with chlorine.

OLIVARIS (oliva, an olive). Resembling an olive; hence, the term corpora forming the essential part of fat oils olivaria denotes two olive-shaped emiwhich are not drying, as oil of almonds. | nences of the medulla oblongata.

I. Oleine. The oleate of oxide of glyfound in nature.

2. Oleëne. This and elaëne are two in Aix and Monpellier:hydrocarbons formed by distillation of the metoleic and hydroleic acids.

OLEO-RESINS. of volatile oil and resin, the proper juices the olives ground to a paste, and subof coniferous and other plants.

OLEO-RICINIC ACID. An acid pro-

OLEOSACCHARUM (oleum, oil, sac-made from the olives which have been charum, sugar). The name given to a used for obtaining the virgin oil. mixture of oil and sugar incorporated easily diffusible in watery liquors.

pot-herbs, or plants grown for food.

OLEUM (olea, the olive). Oil; an lamps, and is sometimes called lamp-oil. unctuous liquid, animal or vegetable. It never occurs in commerce.

pel's oil.

2. Oleum æthereum. Ætherial oil, or oil of wine, used as an ingredient in the tier to a peculiar substance which recompound spirit of æther.

oil, formerly simple balsam of sulphur.

4. Oleum e vitellis. Oil of eggs; obtained by boiling the yelks, and then to he full, or hot). A small hot eruption, submitting them to pressure; fifty eggs covering the whole body; when partial, yield about 5oz. of oil. It is used on the it is termed phlyctæna. continent for killing mercury.

a fluid state. See Bitumen.

first pair of cerebral nerves, &c.

sense of smell, or the act of smelling.

OLIBANUM. A gum-resin, the pro-duce of the Boswellia serrata. It has mach, or obomusum. been supposed to be the thus, or frankincense of the ancients.

OSCILLATORIUS. [Oscillating.] Ver-6. Processes which belong to the im-satile, or that which is slightly attached movable articulations, are termed serræ by its middle to any body, so that the or dentations, as in the bones of the cra-two halves are balanced, and swung nium; roots, as in the teeth; and ridges, backwards and forwards; a term applied

OSCITANCY (oscito, to gape; from os 7. Processes which serve for the inser-ciere, to stretch the mouth). Yawning,

OSCULATOR (osculor, to kiss). 1. According to their general form; name given to the orbicularis oris, or

OSMAZŎME (όσμη, odour, ζωμός, small tubercles placed very close to-alcoholic extract obtained from muscular gether, and separated by slight de-fibre, brain, &c., having the taste and

OSMIUM (ὀσμὴ, odour). A new metal A little door; the orifice of the peri-lately discovered by Mr. Tennant among thecium of some Fungaceous plants, as platina, and so named by him from the sphæria. pungent and peculiar smell of its oxide.

Osmic acid. The volatile oxide of osl of a chamber, the mouth of a river. mium, of extremely acid and penetrating

OSSA ALBA. White bones. The name given by Van Helmont to the precipitate where a scrous membrane communicates formed by the natural salt of the urine, with the exterior. in the production of calculus. It was called by Paracelsus, tartar.

OSSICULUM (dim. of os, ossis, a tube. bone). A little bone. Hence the ossicula tained in the cavity of the tympanum, rous Molluscous animal. viz. the malleus, the incus, the orbiculare os, and the stapes; they are subservient shells.

to the propagation of sound.

to become). The formation of bone; the They consist principally of carbonate of deposition of calcareous phosphate, or lime, and therefore possess the same mecarbonate on the soft solids of animal dicinal properties as chalk. bodies.

OSTEO- (ὀστέον, a bone). A prefix de-

noting the presence of bone.

1. Osteo-anabrosis (ἀνάβρωσις, absorption). A name given by Dr. Cumin to rates, and forms what is vulgarly called the simple absorption of bone, unaccom- an imposteme or imposthume in the head panied by secretion of pus. It is by this -a term corrupted from aposteme. It process that Nature produces the removal sometimes becomes chronic, and is then of the milk-teeth, &c.

Osteo-geny (γένεσις, formation). The

growth of bones.

 Osteo-graphy (γράφω, to describe). A description of the bones.

Osteo-logy (λόγος, an account).

treatise of the bones.

- 5. Osteoma. Bony tumour; a calcarebrain.
- Osteo-malacia (μάλακὸς, soft). Softening of the bones, or rachitis.
- Osteo-pædion (παιδίον, a child). An osseous or stony mass vibrations. into which the fœtus is sometimes found to have been converted in the uterus.

 Osteo-sarcoma (σὰρξ, flesh). sarcosis. The growth of a fleshy, medullary, or cartilaginous mass within a bone.

9. Ost-hexia ("¿¿ıç, a habit). Ossific diathesis; an affection in which soft parts become indurated by a deposit of ossific matter.

Ost-itis. Inflammation of a bone. Osteotomist. An instrument for breaking up the bones of the child's head, parthrough a narrow pelvis.]

OSTIOLUM (dim. of ostium, a door). [OVAL. See Ovum.]

OSTIUM (os, the mouth). The door

1. Ostium abdominale. The orifice at the fimbriated extremity of the Fallopian tube,-the only place in the whole body

2. Osteum uterinum. The orifice at the uterine extremity of the Fallopian

OSTREA EDULIS (δστρακον, a shell). auditus, a series of four small bones con. The common edible Oyster, a Conchife-

Testæ præparatæ. Prepared oyster-ells. The shells are freed from impurities by boiling water, then crushed OSSIFICATION (os, ossis, a bone, fio, and pulverized previous to elutriation.

> OTALGÍA (οὖς, ἀτὸς, the ear, ἄλγος, pain). Otitis. Ear-ache; pain in the ear.

It has been distinguished into-

1. Externa, which generally suppucalled otorrhæa.

2. Interna, or internal imposteme.

OCTOCONITE (οῆς, ώτος, the ear, κόνις, dust). A calcareous deposit found in the sacs of the vestibule, analogous to the otolites, or calcareous crystalline masses found in the vestibular sac of fishes.

OTOLITES (οῦς, ώτὸς, the ear, λίθος, a os concretion, occasionally found in the stone). Calcareous concretions found in the labyrinth of fishes and fish-like amphibia, which, by being in contact with the membranous parts of the labyrinth, Li-increase by their resonance the sonorous

> [OTOPLASTICE (οδς, the ear, πλαςτιkoc, forming). Plastic operation for the

restoration of the car.]

OTORRHŒA (δὖς, ἀτὸς, the ear, βέω, to flow). The designation of otitis, when it has passed into a chronic state; it then becomes an otitic catarrh.

OTTO or ATTAR OF ROSES. Prepared from the petals of the damask and other roses, by distillation, exposing the product to the night air, and skimming off the fine oil floating on the surface.

OURETIC ACID (offor, urine). A supticularly at the base of the skull, so as to posed new acid of Proust and Bergmann, enable the operator to extract the fœtus shown by Klaproth to be biphosphate of soda.

OVARIUM (ovum, an egg). An organ OXALIC ACID. An acid existing, in containing the ova of animals. The ova- the form of an acid salt of potash, in ries of the human subject, formerly called many plants, particularly in the species testes muliebres, are two small oval bodies of Oxalis and Rumex; combined with placed in the substance of the broad ligalime, it forms a part of several lichens.

OXALIDACEÆ. The Wood sorrel

the tube of the ealyx contracts an ad-stamens hypogynous; fruit capsular. hesion with its sides; superior, when no such adhesion exists; consequently, an sorrel, a plant which yields the binoxainferior ovary involves a superior calyx; late of potash, or salt of wood-sorrel. a superior ovary, an inferior calyx. When an ovary adheres to the calyx merely by limate, obtained by decomposing oxalate its back, it is termed parietal.

tical, and broadest at the lower end. OVICAPSULE. The capsule of the forming there what is termed the calyx.

OVIPAROUS. See Ovum.

hydatid, supposed to be formed in the are distinguished by the prefixesarticulation of the wrist. See Hydatis.

OVULUM (dim. of ovum, an egg). A minimum of oxygen, as protoxide. little egg; a term commonly used synonymously with ovum. See Ovum.

1. Ovula Graafiana. Serous vesicles also called binoxide. found in the structure of the ovarium-

developed. 2. Ovula of Naboth. [Glandulæ Nabothii.] Small vesicles found in and around mum of oxidation, as peroxide.

the os uteri, and mistaken by Naboth for ova.

of two tunics and a nucleus. An egg; a small vesicle OVUM.

bryo, or rudiments of the fætus.

ovale is applied to a foramen between of animals. Its present name was prothe auricles in the fœtus.

- sometimes given to the Fallopian tube, was called by Priestley dephlogisticated which conducts the ovum to the ute- air; by Scheele, empyreal air; and by
- 3. Ovi-parous (pario, to bring forth). 2. Oxygen Water. A solution of oxy-Animals which bring forth their young gen in water. This must not be conjusted on in the egg.
- 4. Ovo-viviparous. within the body of the parent.

Ovarium, in plants. The hollow case tribe of Dicotyledonous plants. Herbaat the base of the pistil, inclosing the ceous plants, undershrubs, or trees, with ovules. It is said to be inferior, when leaves alternate; flowers symmetrical;

Oxalis Acetosella. Common Wood-

OXAMIDE. A white insoluble subof ammonia by heat. The term is de-Ovate. Egg-shaped; oblong or ellip-rived from the first syllable of oxalic acid and ammonia.

OXIDATION. The process of conovum, which in many invertebrata is verting metals or other substances into insulated from the proper tissue of the oxides, by combining with them a cerovary, and may even escape with the tain portion of oxygen. It differs from ovum; but, in the oviparous vertebrata, acidification, in the addition of oxygen coalesces with the theca of the ovary, not being sufficient to form an acid with the substance oxidated.

OXIDES (formerly called calces). Sub-OVULIGER (ovulum, a little egg, gero, stances combined with oxygen, without to bear). The name of a new kind of being in the state of an acid. Oxides

Proto (πρῶτος, first), denoting the

2. Deuto (δεύτερος, second), denoting a second proportion, as deutoxide.

3. Trito (τρίτος, third), denoting a third the ova in which the future embryo is proportion, as tritoxide. This is also called ter-oxide.

4. Per (very much), denoting the maxi-

OXY- (ôgês, acid). A prefix, denoting in some terms, the presence of acidity; 3. Ovule of plants. A small pulpy in others, the presence of oxygen; in a body borne by the placenta, and grathird class of terms, acuteness of sense dually changing into a seed. It consists or function; and, lastly, sharp-pointed-

1. Oxy-gen (γεννάω, to generate). A within the ovarium, containing the em- gas which forms about a fifth of atmospheric air, is capable of supporting 1. Ovalis. Egg-like. Hence the term flame, and is essential to the respiration posed by Lavoisier, from the supposition 2. Ovi-duct (ductus, a canal). A name that it was the sole cause of acidity. It

Condorcet, vital air.

founded with oxygenated water, which is Animals which the peroxide of hydrogen; nor with bring forth their young in a living state, Searle's oxygenous aërated water, which the egg having been previously hatched is an aqueous solution of the protoxide of nitrogen.

Oxy-mel (μέλι, honey). A compound lime in fine powder to an atmosphere of

of honey and acetic acid.

4. Ox-acid. An acid containing oxy- quantity, and combines directly with the gen. The relative number of atoms lime, of oxygen in different acids formed 13. tions.

5. Oxy-chloride. A combination of an See Chlorine. oxide and a chloride of the same metal. excepting the potassium family. consist of hydrochloric acid combined on being mixed with chlorine. with two or more equivalents of an oxide.

of vinegar and water.

7. Oxy-croceum. A warm discutient acid, and with sodium in soda. plaster, consisting of wax, resin, pitch, turpentine, saffron, and several gums.

8. Oxy-genation. A term often used as synonymous with oxidation; it differs, however, from it in being of more general import, every union with oxygen being an oxygenation; whereas oxida-in the same degree of light. tion takes place only when an oxide is formed.

9. Oxy-alcohol blowpipe. An apparatus contrived by Dr. Marcet for increasing supplied with oxygen gas. The oxygen appendages, the intestines, &c. may be furnished from an air-holder, a has been stored.

heat thus produced.

11. Oxy-iodine, A name given by Sir parts. H. Davy to anhydrous iodic acid, or the compound of oxygen and iodine. iodates.

lime, or bleaching powder, prepared by quantities of which exist in both air and exposing thin strata of recently slaked water.

chlorine. The gas is absorbed in large

13. Oxy-muriatic acid. The former by the same element with this substance name of chlorine; it was also formerly is indicated by prefixes and termina called dephlogisticated marine acid; and by the French, oxygenized muriatic acid.

 Oxy-prussic acid. A name formerly The given to chloro-cyanic, or chloro-prussic oxychlorides are commonly termed sub- acid, from its being supposed that the muriates, on the supposition that they hydro-cyanic acid had acquired oxygen

15. Oxy-salt. A compound in which oxygen is found both in the acid and the 6. Oxy-crat (κράω, to mix). A mixture base; thus in phosphate of soda, it is associated with phosphorus in phosphoric

> Oxy-opia (ὄψις, vision). Acuteness of sight. Increased sensibility of the retina, by which the smallest objects are clearly seen for a few moments in an extremely weak light; yet, excepting at such periods, even larger objects are not seen

 Oxy-phonia (φωνή, voice). Acuteness, or shrillness of voice; synonymous

with paraphonia clangens.

18. Oxy-urus (οὐρὰ, a tail). The Vertemperature. It consists in urging the micular Ascaris; a parasitic animal, flame of an alcohol lamp by a blow-pipe sometimes found in the uterus, or its

OZÆNA (οζη, a stench). An ulcer, gas-bag, or any other vessel in which it situated in the nose, discharging a fætid purulent matter, and sometimes accom-10. Oxy-hydrogen blowpipe. An appa-panied with caries of the bone. In its ratus by means of which a stream of hy-learly state it is generally termed catarrh; drogen is supplied with pure oxygen as when more advanced it is called cancer it escapes from a nozzle, and an intense of the nostril or throat, as it occupies principally the one or the other of these

of feldspar, used as the vitrifying ingredient in the porcelain of the Chinese.

PEWTER. basis of which is tin; it is commonly paration of medicinal substances. called *étain* in France, where it is generally confounded with true tin. There musculo-membranous bag, situated at the are three kinds, distinguished by the back part of the mouth, leading to the names of plate, trifle, and ley-pewter.

PEYER'S GLANDS. Plexus intesti-The clustered glands of the in-rynx.] testines, or aggregatæ, first discovered by Peyer. Each gland is surrounded by pharynx. See Cynanche. a circle of minute tubes, called corona 3. Pharyngotomy (τομή, section). The tubulorum. See Brunner's Glands.

PHACIA (φακία, a lentil seed). Greek term for lentigo, or freckles.

PHÆNOGAMOŬS (φαίνω, to show, γάμος, nuptials). A term applied to those vented by Petit, for scarifying the tonplants in which the sexual organs are sils, and opening abscesses about the visible. All others are called cryptoga- fauces. mous.

ulcer which spreads, and, as it were, eats geus.

away the flesh

toes, from their regularity.

PHANEROGAMOUS (φανερός, manifest, γάμος, nuptials). A term applied to organs are visible.

with phænogamous...

PHANTASM (φαντάζω, to make appear). A perception of sensation in the from the bark of the Phillyrea media and organs of the senses, dependent on inter-latifolia. nal causes, and not excited by external objects. See Hallucination.

PHARMACEUTICS (φάρμακον, a medicine). That branch of medicine which introducing the materials for generating consists in compounding drugs.

A medicine, or drug.

- That branch of Materia Medica, which cines.
- 2. Pharmaco-gnosy (γιγνώσκω, to know). That branch of Materia Medica which treats of the natural and chemical history of unprepared medicines or simples. It is also termed pharmacography, phar-incarccrating phimosis of Good. Compare macomathia, &c.

 Pharma-cologia (λόγος, description). The method of administering medicines.

- term is now used to denote a standard cision or wound. It is termedcode of medicine.
- Pharmaco-pola (πωλέω, to sell). seller of drugs; a druggist.

PHARMACY (φάρμακον, a drug). The application of chemical, and to a certain A factitious metal, the extent of physical, knowledge, to the pre-

stomach.

[1. Pharyngeal. Relating to the pha-

2. Pharyngitis. Inflammation of the

operation of cutting into the pharynx, The for the purpose of extracting any foreign

body.

4. Pharyngotomus. An instrument, in-

5. Pharyngo-staphylinus. The second PHAGEDÆNA (φάγω, to eat). An or middle portion of the palato-pharyn-

[PHILLANDRIUM AQUATICUM. PHALANX (φάλαγξ). A battalion in Fine-leaved water-hemlock. An Euro-Macedonian armies, composed of pean Umbelliferous plant, the seeds of 16,000 men. Hence the term phalanges which are said to be stimulant and naris applied to the bones of the fingers and cotic, and they have been given in asthma, intermittent fever, dyspepsia, atonic ulcers, &c.]

[PHENOMENA (φαινομαι, to appear). those plants in which the reproductive Any appreciable change which takes It is synonymous place in an organ or function. Any remarkable or unexpected occurrence.

PHILLYRIN. A substance obtained

PHILOSOPHICAL CANDLE. A hottle fitted with a cork, through which a slender glass or metallic tube passes. On hydrogen, and fixing the cork and tube PHARMACON (φάρμακον). A poison, air-tight, a jet of hydrogen is discharged, which may be ignited by the application Pharmaco-dynamics (δύναμις, power), of a burning body, or an electric spark.

PHILTRE (φίλτρον, from φιλέω, to love). treats of the power or effects of medi- A love-potion; a medicine supposed to

inspire love.

PHIMO'SIS (φιμός, a muzzle). Capistratio. An affection of the prepuce, in which it cannot be drawn back, so as to uncover the glans penis. This is the Paraphimosis.

PHLEBITIS (φλὲψ, a vein). Inflammation of the veins. It is distinguished Pharmaco - pαia, (ποιέω, to make). by a hard, cord-like, tender line, pursuing The process of preparing medicines. The the course of a vein or veins, from an in-

> 1. Suppurative, and diffused; and at-A tended by typhoid fever, and abscesses.

2. Suppurative, and adhesive; and ac-

companied by distinct abscesses in the tion of combustible matter with oxygen, tracted fever.

PHLEBOLITE (φλὲψ, φλεβός, a vein, Albas, a stone) A small calcareous confinflammation; a flushing. The first gecretion found in the cavity of the veins.

section). vein, for the purpose of blood-letting.

PHLEGMA (φλέγμα). Phlegm; a thick, tenacious matter secreted in the lungs.

produced glairy evacuations, from excitement of the mucous follicles.

Phlegmatic. A term applied to the pituitous temperament. See Tempera-

ment.

 Phlegmo-rrhagia (ρήγνυμι, to burst forth). Profuse pituitous secretion.

4. Phlegma, in Chemistry, denotes a watery distilled liquor, as distinguished from a spirituous liquor. term dephlegmation signifies the depriving any liquid of its superfluous water.

burn). Puerperal tumid leg; an affection nymous with the pustule of Celsus. depending on inflammation of the iliac and femoral veins. It has been termed A watery vesicle of the ciliary margin. adema lacteum, hys'eralgia lactea, metastasis lactis, ccchymoma lymphatica; by formerly employed to denote a cutaneous Dr. Cullen, anasarca serosa; and by Dr. Lee, crural phlebitis. The term consists nerally ichorous, or vesicular pimples. of a Greck substantive and a Latin ad-The term phlyctana is now used jective, and denotes painful inflammation.

general term used by Cullen, Sauvages, &c., for local inflammations; "but, as dark-coloured scab. phlegmasia and phlegmatic import, in medical language, a very different and poise). Delphinic acid. A volatile acid almost an opposite idea," Dr. Good pre-contained in train oil or seal oil, and in fers the term phlogotica, derived from the berries of Viburnum opulus. the same root.

PHLEGMON (φλέγω, to burn). tense, painful, red, circumscribed swell- with elain. ing, raised more or less above the level of the surrounding integuments, attended purple; supposed to be a hydrate of inby a sense of throbbing, and a tendency digo, with two equivalents of water. to suppuration. See Phyma.

The name given by Mohl to one of the tion of the voice.] layers of bark, the epi-phlaum of Link.

See Bark of Plants.

PHLOGISTON (φλέγω, to burn). A to that form of the receptacle in plants, supposed to consist of an incombustible monly thalamus, base, united to this phlogiston, which escaped during combustion. This pro- to produce). Chloro-carbonic acid gas; a cess is now attributed to the combina-compound of chlorine and protoxide of

course of the inflamed vein, with pro- which is hence called a supporter of combustion.

nus of the order phlegmasiæ in Cullen's PHLEBOTOMY (φλὲψ, a vein; τομή, nosology; it is distinguished into simple Venæsectio. The opening of a phlegmon and erysipelas, and is succeeded by abscess, gangrene, or sphacelation.

PHLORIDZIN (φλοιός, bark). A sub-1. Phlegm-agogues (ἄyω, to excite), stance discovered in the bark of the root. The ancient name of purgatives, which of the apple, pear, cherry, and plum tree. It has been considered as crystallized salicin plus two atoms of oxygen.

I. Phloretin. A compound obtained by boiling a solution of phloridzin with any acid, except the nitric and chromic.

2. Phloretic acid. Obtained by the action of nitric acid on phloridzin.

3. Phlorizein. A red substance obtained by the joint action of air and am-Hence the monia on humid phloridzin.

PHLYCTÆNA (φλύκταινα, a vesicle, from φλύζω, to be full, or hot). A vesicle PHLEGMASIA DOLENS (φλέγω, to containing ichorous fluid; said to be syno-

PHLYCTENULA (dim. of phlyctæna).

> PURPURATE. A combination of

and arrack.

6. Pulvis ipecacuanhæ comp. [Pulvis | PURPURIC ACID. An acid first de-ipecacuanhæ et opii, Ph. U. S. Ipecacu-scribed by Dr. Prout, and named by Dr.

Wollaston from its remarkable tendency to form red or purple-coloured salts with designation of a circular rim placed inalkaline bases. It is obtained from uric ternally at the narrowest part of the or lithic acid.

PURSINESS (pursy, from poussif, coats of the stomach. French). The colloquial term for obesity

in stunted persons. PURULENT (pus, matter). Of the tympanum, immediately behind the fenesnature of pus; attended with pus.

PUS (πὐον, matter). The fluid formed of the blood.

PUSH. A common phlegmon, differ-rectus. ing from a boil or furunculus, in contain-

borl always containing a core.

PUSTULA (of the matter or nature of to the compressor nasi. pus, from $\pi \tilde{vov}$, pus; $\tilde{v}\lambda\eta$, matter.— 3. Emmentia pyramidalis. A small, Good). A pustule; an elevation of the hollow, conical eminence, situated bepus. The varieties, as given by Bate-part of the prominence formed by the man, are phlyzacium, psydracium, achor, aqueduct of Fallopius. and favus.

the French.

A synonymous term for the endocarp, or downward. innermost layer of the pericarp, of osseous fruits.

composition of animal or vegetable mat- Laurent.] ters, attended with fætor; a species of

fermentation,

PUTRID FEVER. A name given to or Pellitory of Spain. typhus, from its symptoms of putres-cency. It has been called spotted fever, an account). A description or treatise of from its being attended with petechiæ, fevers. or flea-bite spots; and by the Spaniards,

PUTRILAGE. A term applied to animal matters which are partly decom-

posed.

kidneys.]

PYINE (πῦον, pus). A peculiar mat-midalis. It moves the thigh. ter, besides albumen, found by Gueterbook in solution in pus. Vogel doubts mineral spring at Pyrmont, a village in whether it is an essential component of the circle of Westphalia, in Germany. pus. The same matter is contained in mucus.

[PYLORIC. Relating to the pylorus.] fire, heat, fever, &c. ing the entrance into the bowels. See the citric, &c. Cophagus, or the porter.

Valve of the pylorus. An incorrect pylorus; it is merely a replication of the

PYRAMID. A conical bony eminence situated on the posterior wall of the

tra ovalis.

297

I. Pyramidalis. A muscle arising by the process of suppuration; a matter from the pubes, and inserted into the consisting of globules larger than those linea alba, near half way between the pubes and umbilieus. It assists the

2. Pyramidalis nasi. A slip of the ing uniform and mature pus; that of the occipito frontalis muscle, which goes down over the nasal bones, and is fixed

cuticle, with an inflamed base, containing hind the fenestra ovalis, and at the lower

4. The name pyramidalis was also Pustule malignant. A form of mortifi-given by Winslow, Casserins, and others, cation, generally believed to originate in to the levator labii superioris alæque nasi, horned cattle, and to be communicated from its dividing into two small fasciculi, from them to man. It is the charbon of one of which is implanted into the alæ nasi, while the other goes to the upper PUTAMEN (puto, to prune or cut). lip; it is thus pyramidal, with its base

[PYRECTICA (πυρετος, fever). Fevers.] PYREN. A colourless, crystallizable PUTREFACTION (putris, putrid; substance, obtained from pitch, by disfacio, to make). The spontaneous de tillation at a high temperature, by M.

PYRETHRIN. The active principle of the root of the Anacyclus Pyrethrum,

PYRETHRUM (Ph. U. S.) Pellitory. tavardillo, from tavardo, a spotted cloak. The root of Anthemis pyrethrum.

[PYREXIÆ (πυρ, fire). Fevers.]

PYRIFORMIS (pyrus, a pear; forma, likeness). Pear-shaped; a muscle arising [PYELETIS (πυελος, pelvis). Unflam- from the hollow of the sacrum, and inmation of the pelvis and calices of the serted into the cavity at the root of the trochanter major: it is also called pyra-

PYRMONT WATER. A celebrated

PYRO- (πῦρ, fire). Words compounded with this term denote the presence of

PYLORUS (πόλη, a gate; τρα, care) 1. Pyr-acid. An acid produced by the Literally, a gate keeper. The lower and destructive distillation of an organic acid, contracted orifice of the stomach, guard- as the pyro-citric, by decomposition of

2. Pyrexia. Fever. Under the term

Pyrexiæ Cullen classed together febrile French, fer chaud), with eructation of diseases, including intermittent and continued fevers.

3. Purites, Native compounds of metals with sulphur; as iron pyrites, or the sulphuret of iron. The term pyrites originally denoted a fire-stone, a sort of stone

out of which fire could be struck. 4. Pyro-acetic ether. An ethereal fluid, procured by the distillation of acetic acid.

5. Pyro-digitalina. Empyreumatic oil of toxglove, obtained by destructive distillation of the dried leaves, terms have been suggested for the empyreumatic oils of other plants, as pyrodaturia, pyro-hyoscyamia, &c.

6. Pyro-ligneous acid. An acid obtained by distillation from wood. In its

strongest form it is acetic acid.

7. Pyro-ligneous spirit. A substance produced during the distillation of wood. It is more volatile than alcohol, but burns very well in a spirit lamp, and has the

advantage of being cheap.

- 8. Pyro-meter (μέτρον, a measure). An instrument for measuring high temperatures. Wedgewood's pyrometer is founded on the principle, that clay progressively contracts in its dimensions, as it is progressively exposed to higher degrees of heat. The indications of Daniell's pyrometer result from a difference in the expansion and contraction of a platinum bar, and a tube of black lead ware in which it is contained: these differences are made available by connecting an index with the platinum bar, which traverses a circular scale fixed on to the tube.
- Pyro-metry (μέτρον, a measure). That branch of science which investigates the dilatation of bodies by heat,
- 10. Pyro-phorus (φέρω, to carry). An artificial product, which takes fire on exposure to the air: hence it has been called, in Germany, luft-zunder, or air-tinder. It is prepared from alum by calcination, with various inflammable substances.

πυο, fire). Pain in the epigastrium, as of covered by an operculum or lid, as in extreme heat (emphatically called by the hyoscyamus, anagallis, &c.

watery fluid. This disease is called in England black-water; and in Scotland water-brash.

 Pyro-techny (τέχνη, art). of fire, or the management and application of fire in chemical operations,

 Pyr-othonide (δθόνη, linen). liquid prepared by distilling rags, and then called rag-oil; but commonly procured by burning a cone of paper on a plate, and then termed paper-oil. It is a popular remedy for toothache.

14. Pyro-xylic spirit (ξύλον, wood). Another, and a more classical, name for pyro-ligneous spirit. This was formerly termed by Mr. Taylor, pyroligneous

ether.

PYROLACEÆ. The Winter-green tribe of dicotyledonous plants. Herbaceous plants with leaves either wanting or simple, entire or toothed; flowers monopetalous; stamens hypogynous, double the number of the petals; ovarium superior, many seeded; seeds winged.

Pyrola umbellata. Ground Holly, Winter Green, or Pipsisewa; a plant much celebrated for its specific action on the urinary organs. It is now called Chimaphila umbellata. In America it is called the King's Cure.

PYRRHIN (πυρρός, red). A term applied by Zimmermann to an atmospheric organic substance which reddens solu-

tions of silver.

PYRUS AUCUPARIA. The Mountain Ash; a Pomaceous plant, which yields a large quantity of hydrocyanic

acid.

Pyrus cydonia. The former name of the Quince, now termed Cydonia vulgaris; it has all the characters of Pyrus, except that the cells of the fruit are many-seeded, and the seeds enveloped in a thick soluble mucus.

PYXIDIUM (pyxis, a box). A fruit which dehisces by a transverse incision, so that, when ripe, the seed and their 11. Pyrósis (πύρωσις, burning; from placenta appear as if seated in a cup,

quantum satis, as much as is sufficient.

QUACK (quacken, Dutch). A term applied, by way of derision, to a person An instrument for estimating the degree

Q. S. An abbreviation, employed in who professes to cure all diseases by a prescriptions, for quantum sufficit, or single remedy; also to remedies which are sold under the protection of a patent.
QUADRANT ELECTROM ETER.

or intensity of electricity, invented by in quadri-locular; four-celled; tetra-Mr. Henley. The differences of electric spermous, four-seeded.

equal parts, called degrees.

intensity are denoted by an index which | QUADRIGEMINUS. Four double; a traverses a quadrant divided into ninety term applied to four tubercles situated on the upper part of the posterior surface of QUADRA'TUS. The name of several the brain; the two upper tubercles are

oblong, form. These are-

muscles, derived from their square, or called the nates, the two lower the testes. QUADRUMANA (quatuor, four, ma-

both act, they bend the loins forward.

I. Quadratus lumborum, arising from nus, a hand). Four-handed; the design the crest of the ilium, and inserted into nation of an order of Mammalia, includthe last rib, and the transverse processes ing the monkey, the lemur, &c., which of the first four lumbar vertebræ. It in have a movable thumb on their lower clines the loins to one side; and when extremities opposed to the fingers; all their extremities are, in fact, instruments

2. Quadratus femoris, arising from the of prehension. tuber ischii, and inserted into the inter- QUADRUPLICI (quatuor, four, plica, trochanteral line. It moves the thigh a fold). A Latin numeral, denoting four-

backwards. 3. Quadratus genæ. A name given to

QUALM. A Saxon term for a sudden

the muscle, otherwise called depressor attack of sickness. labii inferioris.

QUANTITY. Under this article is QUADRI- (quatuor, four). A Latin shown the correspondence between the prefix, denoting the number four, and French and English Weights and Mea corresponding with the Greek tetra, as sures, as calculated by Dr. Duncan, jun.

Lite-pared from this plant.

S co- TARTARIC ACID. An acid existing

I. Para-tartaric acid. An acid contained in the cream of tartar of the wines

2. Tartralic acid. The first modificasupposed to be identical with Brazilian paratartaric acid undergoes similar modifications by exposure to heat.

3. Tartro-vinic acid. Obtained by turing the abdomen, and drawing off the boiling tartaric acid with absolute alco-

hol.

4. Tartro-carbydric acid. Obtained stance, chiefly obtained from the pine, by treating pyroxylic, or wood spirit, with

Tar-water. A once celebrated remedy, by the union of tartaric acid with a base.

TARTARUM. Tartar, or the bi-tartrate of potash; a salt which precipitates TARANTISMUS (tarantula, an ani-during the fermentation of wine, owing of tartar whey; prepared by adding about lustre. two drachms of the bi-tartrate to a pint

attracts water, and changes its form.

TAURIN (taurus, an ox). A neutral moist; in the concrete, fire, air, earth, substance, derived from unprepared ox- water. Thus we have—

bile.

hand.

yew, which signifies tea oil.

TEARS. The peculiar fluid which sations, lubricates the eye. This term denotes, 2. The Melancholic, or atrabilarious in chemistry, any fluid falling in drops, as temperament. This is described as exist-gums or resins, exuding in the form of ing in a firmer and thinner frame than in the preceding case, with a dark com-

bland fixed oil, called gingilic oil.

TEGUMENT (tego, to cover).

plied to web-like tissues.

curs in all parts of the animal body in and full pulse. general, and is termed intermedia vel one sense to unite, and in another to and physical life.

separate them, and is then named organica TEMPERATURE (tempero, to mix

2. Tela adiposa. The adipose tissue of mulated in a body, as measured by an animals, consisting of an aggregation of instrument, or by its effects on other microscopic vesicles, grouped together, bodies. and connected by laminar cellular tis-

Tissue.

Tela aranearum. Spider's web, or the metal. cohweb; employed as a styptic, and internally, in America, in intermittents.

prolongation of the pia mater in the third gray, thus indicating the age. ventricle: it is also called relum inter-

γειον, vessel, εκτασις, dilatation). Nævus upper part of the coronoid process of the maternus. Aneurism from Anastomosis, lower jaw. It draws the lower jaw up-Dilatation of vessels remote from the ward. heart.

1. Serum lactis tartarizatum. Cream(rare metal, of a brilliant silvery-white

TEMPERAMENT (tempero, to mix together, to temper). Crasis. A mixture 2. Oleum tartari per deliquium. A or tempering of elements; a notion liquid procured by exposing carbonate of founded on an ancient doctrine of four potash, called salt of tartar, to the air; it qualities, supposed to temper each other: these are, in the abstract, hot, cold, dry,

1. The Sanguine or Sanguineous tem-TAXIS (τάσσω, to put in order). The perament, indicative of the predominance operation of reducing a hernia with the of the sanguineous system; supposed to be characterized by a full habit, soft skin. TEA Oll. An oil procured from the ruddy complexion, blue eyes, red or auseeds of the Camellia oleifera of China, burn hair (the flavus of the Romans, and by expression. The Chinese term it cha the yellow-haired of the Scotch), frequent pulse, large veins, and vivid sen-

TEEL SEEDS. The produce of the plexion, black hair, and a slow circula-Sesamum orientale, an Indian plant of tion; the nervous system is less easily the order Pedaliacea. The seeds yield a moved; the disposition is grave and meditative (meditabundus, Gregory).

A 3. The Choleric, or bilious temperacovering of the body, as the cuticle, &c. ment. This is intermediate between the TELA. A web of cloth; a term ap-two preceding, and is marked by black curling hair, dark eyes, a swarthy, and 1. Tela rellulosa vel mucosa. The cel- at the same time ruddy, complexion, a lular tissues of organized bodies. It oc-thick, rough, hairy skin, and a strong

4. The Phlegmatic, or pituitous temlaxa; it surrounds all the organs, and is perament. This differs from all the prethen called stricta; penetrates into their ceding in the laxity of the skin, the lighter interstices, and is then designated sti-colour of the hair, and the greater slugpata; and is the basis of all, serving in gishness of the faculties both of animal

vel parenchymalis. It has been supposed various things in due proportions). The comparative degree of active heat accu-

TEMPERING. The operation of heatsue. It is the reservoir of the fat. See ing iron to a certain extent, indicated by the colour presented on the surface of

TEMPORA (pl. of tempus, time). The temples, or that part of the head on 4. Tela choroïdea. A membraneous which the hair generally begins to turn

Temporalis. A muscle arising from the temporal fossa and the semicircular [TELANGIECTASIS (τηλε, remote, αγ-line bounding it, and inserted into the

TENACITY (teneo, to hold). The de-TELLURIUM (tellus, the earth). A gree of force with which the particles of bodies cohere, or are held together: a forating instrument). A trepan trephine, may be drawn into wire, as gold and pieces of the skull. silver.

quently applied in the description of dis vielded by most species of Pinus; the eases to a condition resembling drunken-appellation, however, more properly beness. Mania e temulentia synonymous longs to the product of the genus Pista-

hook to lay hold of the bleeding vessels

in surgical operations.

cord at the extremity of a muscle, by serted into the humerus. which the muscle is attached to a bone.

TENESMUS (τείνω, to strain). Straining; painful and perpetual urgency to and distinguished from angular. alvine discharges, with dejection of mucus

only, and in small quantity.

[TENOTOMY (τείνω, to stretch, τεμνω, stance composed of three atoms. This term originally signified Atomic Theory. exclusively the division of tendons; but as the object of this operation is to remedy are united in threes. accidents and particularly deformities which are produced by adventitious minerals, metals, etc. fibrous bands, and by the retraction of every operation in which any part, which as a substitute for sugar. is shortened, or retracted, is divided.]

TENSOR (tendo, to stretch). A mussione, consisting of silex and clay.

which stretches any part.

3. Terra damnata vel mortua.

cle which stretches any part.

upon the membrana tympani, and modi- with caput mortuum. fies the sense of hearing.

2. Tensor vaginæ femoris. A muscle of tartar, or the acetas potassæ. arising from the spine of the ilium, and inserted into the fascia lata; whence it is Catechu. This is a misnomer, the subalso called fascialis.

fascia, &c.

TENT. A roll of lint, or prepared sponge, for dilating openings, sinuses, &c. in Lemnos; a compound of aluminum.

TENTACULA (pl. of tentaculum, from Feelers; organs by which given to the curcuma or turmeric root. tento, to feel). certain animals attach themselves to surrounding objects, &c.

TENTORIUM (tendo, to stretch).

tent, or pavilion.

Tentorium cerebelli. A roof of dura ochre, with an orange cast, brought from mater thrown across the cerebellum. In Sienna, and used in painting. leaping animals, it is a bony tent.

TEPIDARIUM (tepidus, warm).

warm bath. See Baths.

TERBIUM. A newly-discovered me-lents. tal, occurring along with yttria. See Erbium.

tion of the third integument of the ovule chalk and pyrites. in plants, said to be the epidermis of the nucleus.

term particularly applied to metals which or instrument for sawing out circular

TEREBINTHINA (τέρμινθος of Theo-[TEMULENTIA. Drunkenness, Fre-phrastus). Turpentine; a resinous juice with mania à potu and delirium tremens.] cia, which contains the true tercbinthus TENACULUM (teneo, to hold). A of the ancients. See Turpentine.

TERES. Long and round. The name of two muscles, the major and the minor, TENDON (τείνω, to stretch). A fibrous which arise from the scapula, and are in-They move the

arm in various directions.

TERETE. Taper; as applied to stems,

TERNARY (ter, thrice). A term applied by Dalton to any chemical sub-

Ternate. A term applied to parts which

TERRA. Earth; as distinguished from

1. Terra alba. The name given in muscles and ligaments, as well as by the trade to the powdered gypsum, employed retraction of tendons, it is now applied to in the manufacture of inferior lozenges,

2. Terra cariosa, Tripoli, or rotten

1. Tensor tympani. A muscle of the demned, or dead earth. The residue of tympanum, which, by its contraction, acts some distillations; a term synonymous

4. Terra foliata tartari. Foliated earth

It stretches the stance being the inspissated juice of a species of Acacia.

6. Terra Lemnia. A bolar earth, found

7. Terra marita. A name sometimes

8. Terra ponderosa. Heavy earth, calk, or barytes. The muriate is called terra A ponderosa salita.

9. Terra Sienna. A brown bole, or

10. Terra sigillata. Sealed earth. Lit-The tle cakes of Lemnian earth, stamped with impressions, and formerly used as absorb-

11. Terra verte. Green earth; this is used as a pigment, and contains iron TERCINE (ter, thrice). The designal mixed with clay, and sometimes with

TERTIAN (tertius, the third). A species of intermittent, or ague, in which TEREBELLA (dim. of terebra, a per-the intermission continues for forty-eight hours, the paroxysm generally commenc- is bent forward; tetanus of the flexor ing about noon, and usually remaining muscles.

under twelve hours. It occasionally exhibits the catenating and protracted value bent backwards; tetanus of the extensor rieties. See Quotidian.

TERTIUM SAL (tertius, third). A 5. Pleurosthotonos, in which the body neutral salt, so named from its constituting is drawn to one side; this is the tetanus a third body, different from the acid and lateralis of Sanyages.

the alkali which compose it.

a substance which, being added to ano and the chronic; traumatic, arising from ther substance, tests or distinguishes its wounds; and idiopathic, from various chemical nature or composition.

Test paper. Paper dipped several times

purple colour.

Ostrea edulis, or Oyster.

The shells are to be well cleaned with third pair. boiling water, and then treated as in the

preparation of chalk.

2. Testa, in Botany. A general term news's system, characterized by the prefor the integuments of the seed, from its sence of four stamens of equal length, frequently presenting a glossy, shell-like See Didynamia.

appearance. The term is sometimes Tetrandrous. Having four stamens of limited to the outermost of these integue about equal length, ments.

TETTER. A corruption from the

the designation of two glandular bodies, scall; but its proper meaning is Herpes. also called didymi, situated in the scrotum.

nation of the ovaries in women.

nates; the two lower, the testes.

or tortoise. A term under which Vogel mended for hysteria, amenorrhea, &c. has described a species of wen, or cyst, containing a fluid, which readily hardens der. Formerly esteemed as a corroborant into horn or nail.

[TETANIC. Appertaining to teta-

and rigidity of the parts affected. Its sion with each other, as in Ranunculacese. varieties are founded on the particular manner in which the body is bent:-

cles of the jaw or throat.

2. Tetanus, in which all the body is affected, and becomes rigid, but retains lobed frond of lichens, and to the bed of its ordinary straightness; its effects are fibres from which many fungi arise; it is confined to the posterior and anterior generally employed to denote the combimuscles.

Emprosthrotonos, in which the body cryptogamic plants.

muscles.

6. Tetanus is also distinguished, ac-TEST (testis, a witness). A re-agent; cording to its intensity, into the acute

ΤΕΤRADYNAMIA (τετράς, four, in a filtered infusion of litmus, and dried εύναμις, power). The fifteenth class of after each immersion, until it is of a deep Linnaus's system of plants, characterized by the presence of six stamens, of which TESTA. A shell. The shell of the four are long, two short, as in Stock.

Tetradynamous. Having six stamens, 1. Testa praparata. Prepared shells. of which two pair are longer than the

ΤΕΤRANDRIA (τετράς, four, ἀνηρ, male). The fourth class of plants in Lin-

TESTIS (literally, a witness, quasi French dartre, or the Greek δαρτός. This testis virilitatis). Orchis. A testicle; term has been used synonymously with

mander. A European Labiate plant, the I. Testes muliebres. A former desig- leaves and tops of which have been employed as a mild corroborant, in uterine, 2. Of the Tubercula quadragemina of gouty, rheumatic, and scrofulous affecthe brain, the two upper are named the tions and intermittent fevers.]

[Teucrium Marum, Cat thyme. TESTU'DO. Literally, a shell-crab, warm, stimulating, aromatic bitter, recom-

Teucrium Scordium. Water german-

in low forms of diseases.]

THALAMIFLORÆ, (thalamus, a bed, nus.] flos, a flower). A sub-class of Exogenous TETANUS (τείνω, to stretch). Lite-plants, having a calyx and corolla, petals rally, stretched or stiff, but used substan-distinct, and stamons hypogynous. Every tively for contraction of the muscles of part of the flower springs separately from voluntary motion, attended with tension the thalamus, without contracting cohe-

THALAMUS (θάλαμος, a bed). A term applied to a part of the brain from which 1. Trismus or Locked Jaw, in which the optic nerve arises. The thalami nerthe effects are confined to the flexor mus- vorum opticorum were termed by Gall the

inferior great ganglia of the brain.

THALLUS. A term applied to the nation of stem and leaves in the lower hlack tea.

Thein. A crystallizable substance, ob-

with caffein.

THEBAIN. crystalline substance, with alkaline pro- under a medium pressure of the atmoperties, procured from opium. Its name sphere, is divided into 180 parts, or deis derived from that of Thebes, an ancient grees, the freezing being marked 32°, city of Egypt.

is sometimes called theca vertebralis.

cavity of the anther, to the sporangium of the zero, or greatest degree of cold.

ferns, to the urn of mosses, &c.

to bear). The stalk upon which the ovary used in France, and is the most conveof plants is sometimes seated lt is synony-injent in practice: it consists in that ar-

The columns of blood, nitrogen, and belongs to a class of bases coming in different directions, were supposed to be pressed together in this part.

represented by aniline.

[TOLUTANUM. Ph. U. S. Balsam of Tolu. The juice of the Myroxylon Ph. U. S.] The root of the Potentilla tormentilla, a European plant of astringent

leather.

TORMINA (plur, of tormen, not in use). Griping; the pain which accompanies enteritis and diarrhœa.

TORPOR (torpeo, to be benumbed). Insensibility, mental or corporeal.

TORRICELLIAN VACUUM. vacuum at the top of the column of mercury in a barometer, so called from Tor-

[TORSION. Twisting. Sometimes tension and vigour of the muscular fibre, employed as a means of arresting arterial hemorrhage. The artery is seized with TONICITY. A property of the mus- forceps, drawn outwards, half an inch or cles distinct from the true or Hallerian more; the base of this isolated part is irritability, and probably dependent on then seized by another pair of forceps, an action of their nerves, and the ner-and held firmly, while the extremity of vous centres: by this power of the dilators the vessel is twisted several times on

bone. It draws the head backward, or

2. Trachclo-scapular. The designation

TORTICOLLIS (torqueo, to twist, col-|the four last cervical, and sometimes of lum, the neck). Wry neck; an inclination the first dorsal vertebræ, and inserted of the neck laterally or forward, arising into the mastord process of the temporal from rheumatism.

Knotted; irregularly obliquely. TORULOSE. contracted and distended, as applied to cylindrical bodies, or seed vessels.

cients laid their skins or other furniture for the convenience of sleeping; hence, ing in length; a region; a space. the term is taken for a bed, and is used in botany as synonymous with thalamus or name given to the prolongation of the receptacle. It also signifies the protube corpora pyramidalia through the pons rance of the muscles, and hence the term Varolii into the crura cerebri. torosus, or muscular.

TOURMALINE. A mineral which is hard enough to scratch glass, and becomes flattened band, which arises from the electric by heat. It is of various colours thalamus options, and turns round the and forms; it is transparent when viewed crus cerebri. across the thickness of a crystal, but perfectly opaque when turned in the op-tract; a name given by Bell to a narrow

posite direction.

to turn). An instrument for checking bottom of the lateral sulcus. the flow of blood into a limb, until some operation has been performed, or a more udes from several species of Astragalus,

commonly called the St. Kitt's Arrow- tragacanth. root. It is said to be the fecula of the rhizome of the Canna coccinea, which ble gum of tragacanth. From its resemflowers every month, and has hence re-blance to gum arabic, it has been termed ceived its French name.

TOXICODENDRON. Ph. U. S.

codendron.]

TOXICOLOGY (τοξικόν, a poison, λόγος, a description). poisons, their classification, effects, &c.

TRABECULA (dim. of trabes, a beam), grows like the beard of a goat. A small beam; a term applied to the small meduliary fibres of the brain, which form, arising from the middle and outer

constitute the commissures.

TRACHE'A (τραχεῖα ἀρτερία, arteria the tip of the tragus, which it pulls for-pera, or rough artery). The wind-ward. See Anti-tragicus. aspera, or rough artery). pipe. The term is derived from the inequality of its cartilages.

1. Trache-itis. trachea.

wind-nipe.

 Trach-enchyma (ἐγχύω, to pour in). The vascular tissue of plants, consisting of change: of spiral vessels, which resemble the tracheæ of insects.

TRACHE'LOS (τράχηλος). The Greek term for the neck.

muscle Trachelo-mastoïdeus. Α

of certain veins, which arise near the A rope or cord made of neck and shoulder, and contribute to twisted grass or straw, on which the an-form the external jugular vein. TRACTUS (traho, to draw).

1. Tractus motorius. Motor tract; the motor nerves arise from this tract.

2. Tractus opticus. Optic tract; a

3. Tractus respiratorius. Respiratory white band, which descends along the TOURNIQUET (French, from tourner, side of the medulla oblongata at the

TRAGACANTH. A gum which expermanent plan of checking hemorrhage and is frequently called gum d'agon.

There are two kinds; viz. the flaky or TOUS LES MOIS. An article of diet, Smyrna, and the vermiform or Morea,

I. Tragacanthin or Adragantin. Solu-

arabine.

Bassorin. The insoluble part of Poison Oak. The leaves of Rhus Toxi-gum tragacanth, named from its similarity to gum bassora.

TRAGUS (τράγος, a goat). A small An account of eminence situated over the meatus externus of the ear, upon which hair often

Tragicus. A muscle of triangular part of the concha, and inserted into

TRANSFORMATION (transformo, to change from one shape into another). Inflammation of the Metamorphosis. The change which takes place in the component parts of the 2. Tracheo-tomy (τομή, section). The blood, during its passage from the mi-operation of making an opening into the nute arteries through the capillary system of vessels into the radicles of the venous system. There are three kinds

> 1. Transformation of the components of the blood into the organized substance Collum. of the different organs, termed intussus-

ceptio or nutrition.

2. Transformation of the components arising from the transverse processes of of the blood on the free surface of an organ into a solid unorganized substance, transverse line of the occipital bone, from vascular textures, or appositio.

the blood into a fluid matter, which es- and the scapula. It is sometimes called capes on the free surface of the organ, or cucultaris, from its resembling a cucultus, secretion. Müller.

from one vessel into another). The ope- nape of the neck, it is named ligamentum

animal into the veins of another.

TRANSUDATION (transudo, to perspire). The process by which fluids pass opposite margins not parallel, as certain through porous substances. Thus, the leaves, arteries and veins are sometimes represented as being porous; and hence, as longing to wounds; caused by wounds. parting with contained fluids by transudation, and imbibing extraneous fluids by tallizable part of common sugar. capillary attraction. See Secretion.

across). That which is placed across or limbs, &c.

crosswise. Hence the terms-

lower ribs, &c., and inserted into the lineal cation to the body of mercurial vapours. alba, and the crest of the ilium. It sup-

ports and compresses the bowels.

2. Transversalis colli. A muscle arising modic kind, which sometimes continues from the transverse processes of the second, third, fourth, fifth, and sixth cervical series of years. vertebræ, and inserted into those of the third fourth, fifth, sixth, and seventh up-bellum; modiolus. A circular saw, for per dorsal vertebræ. It turns the neck perforating the skull in the operation of obliquely backwards and to one side.

placed across or crosswise.

- I. Transversus auris of Albinus. muscle arising from the prominent part tiston. of the concha, and inserted opposite to the outer side of the anti-helix. It draws perforating the cranium. the parts to which it is connected towards TRIADELPHOUS. concha.
- Transversus pedis. A muscle arising and inserted into that of the little toe.
- Transversus perinæi. A muscle arising from the tuber ischii, and inserted into about equal length. the middle line with its fellow. It is supposed to dilate the urethra.

for a table, or a table cover.

multangulum majus. From its name it ribs, and is a muscle of expiration. might be supposed to be square.

The name of three prominences, formed by dies; melancholy; spleen. dilatation of the walls of the porta, in the places which correspond to the signoid or incinerated sea-weed. valves.

VALVE (valvæ, folding-doors). close lid affixed to a tube or opening in consists in an eruption of vesicles, seldom some vessel, by means of a hinge, or passing into suppuration, but bursting at other movable joint, and which can be the tip, and concreting into puckered opened only in one direction. Hence it scabs. It was formerly described by signifies a little membrane which pre-Vidus Vidius under the name of crystalli, vents the return of fluid in the blood-from the white shining appearance of vessels and absorbents.

valve.

bri. The name of a lamina which ascends, laris, behind the tubercula quadrigemina, towards the cerebellum,

the numerous folds observed upon the scrotum. A varicose enlargement of the inner surface of the mucous membrane of spermatic veins, is called *cirsocele*.

the duodenum.

VANADIUM (Vanadis, a Scandina-vian deity). A newly-discovered metal, VARIOLA (quasi parvi vari, small

VAGINALIS GULÆ (vagina, a ores. It occurs in the state of vanadic

VANILLA. The dried fruit of the Vanilla aromatica, and probably of other VAGITUS (vagio, to cry as a child or species, used in the manufacture of choinfant). The crying of young children, colate, of liqueurs, &c. It contains a Celsus applies the term to the screaming great quantity of essential oil, and of benzoic acid.

VAPORARIUM (vapor, vapour).

heads, viz.

1. Ebullition, or the production of root, which produces a specific influence a visible commotion in the liquid; the temperature at which this takes place,

2. Evaporation, or the production of Valeriana officinalis. Its salts are called vapour in a quiet and insensible manner at common temperatures.

VAPOUR (vapor). Any liquid expanded into an elastic or gaseous fluid, by means of heat. It differs from gas in VALETUDINARIAN (valetudo, lits want of permanency, for it returns into health). One who is weakly, sickly, or the liquid state, when exposed to a diminished temperature. Bodies which are VALLEY (vallis). The name of a so convertible by heat, are termed voladepression of the cerebellum, in which is tile; those which resist the heat of the lodged the commencement of the spinal furnace without vaporising, are said to be fixed in the fire.

VAPOUR DOUCHE. A topical vapour-bath, consisting in the direction of VALONIA. The acorn of the Quercus a jet of aqueous vapour on some part of

the body.

VAPOURS. Hypochondriacal mala-

VAREC. The French name for kelp,

VARICELLA. The name given by A Willan to the chicken-pox of Morton. It the vesicles; by Heberden it is named VALVULA (dim. of valve). A little variolæ pusillæ; by others, variolæ spuriæ, volaticæ, and lymphaticæ; by Valvula Vieussenii. Valvula cere-Frank, pemphigus variolodes vesicu-

VARICOCELE (varix, a distended vein, κήλη, a tumour). An enlargement 2. Valvulæ conniventes. The name of and distension of the blood-vessels of the

[VARICOSE. Belonging to or de-

found combined with lead and iron spots or pimples). Small-pox; an crup-

tion of pustules, which suppurate from the eighth to the tenth day; with fever. blood-vessels of the umbilical vesicle.

VARIOLOID DISEASES (variola,

VARIX (varius, unequal). A kind of ment.

knotty, nnequal, dark-coloured swelling, encysted aneurysm is to arteries.

VARNISH. dissolving resins in alcohol, or oil of tur- to be changed into semen. pentine, or in a mixture of oil of turpencontaining shell lac, &c.

ruption. There are two varieties, viz. the sumach, the vittæ of umbelliferous 1. Varus simplex. Simple pimple; plants, &c. with a broad base, bright red colour, and 10. Vasa recta. Small, straight ducts. of solid consistency.

2. Varus punctatus. Maggot pimple; the testis. mucus. Stone-pock is the Acne indurata renchyma of the testis. of Bateman.

VARVICITE. A compound known the blood-vessels of the allantois. only as a natural production, having 13. Vasa vasorum. Very minute numanganese in Warwickshire, and named and veins. from its locality.

or any utensil to hold liquor.

duct of the testis.

3. Vasa brevia. Short branches pass-g from the divisions of the splenic 1. The système à sang noir, compreing from the divisions of the splenic artery, and distributed to the large ex-hending the veins of the body and the tremity of the stomach.

4. Vasa efferentia. Absorbent vessels dark-coloured blood; and hich convey fluids away from the 2. The système à sang rouge, comprewhich convey fluids away from the glands, towards the thoracic duct.

which convey fluids into the glands.

Vasa omphalo-mesenterica.

7. Vasa pampiniformia. A name someand eldos, likeness). Diseases resembling times given to the veins of the spermatic cord, from their tendril-like arrange-

S. Vasa præparantia. A term applied arising from a morbid dilatation of veins, by the old physiologists to the corpus This disease is to veins what the true or pyramidale and spermatic artery; from their tortuosity and tendril-like form A substance made by they supposed that the blood here began

9. Vasa propria. Certain cavities in tine and a drying oil. Lacker is a lac plants, containing the proper secretions of varnish, applied to articles of brass, and the species; of this nature are the cysts in the rind of the orange, the turpentine VARUS. A speck, or spot. Pimple vessels of the pine, the milk vessels of

tipped with a black spot, and discharging, 11. Vasa seminalia. Tubuli seminiferi. on pressure, a grub-like concretion of Very minute tubes, constituting the pa-

12. Vasa umbilicalia. The name of

been lately found among some ores of trient vessels, which supply the arteries

VASCULAR SYSTEM. That part VAS, VASIS. Plural Vasa. A vessel, of the animal economy which relates to the vessels. Harvey took the heart as 1. Vas aberrans. A caecal appendage, the centre, and described the two circuusually found at the angle where the vas lations as the pulmonic, through the deferens applies itself to the epididymis. lungs; the systemic, through the system.

2. Vas deferens. The large excretory The French physiologists have departed from this method, and have assumed the

arteries of the lungs, and containing the

hending the pulmonic veins and the 5. Vasa inferentia. Absorbent vessels arterial system of the body, and containling the bright-red blood.

External carotid.

Internal carotid.

Middle cerebral.

TABLE OF THE ARTERIES.

I. PULMONARY ARTERY.

This divides into two branches, one of which is distributed to each lung. II. AORTA.

- 1. ARTERIES FURNISHED BY THE AORTA AT ITS ORIGIN. Anterior and Posterior Coronary.
- 2. ARTERIES FURNISHED BY THE ARCH OF THE AORTA. Arteria innominata. The first given off by the arch. Primitive carotid,-Divided into external and internal carotids.

Furnishes 1. Superior thyroid. 1. The dorsal, and
2. The two sub-lingual.
1. The inferior palatine.
2. The sub-mental. 2. Lingual, which gives-External maxillary. 3. The coronary arteries of which furnishesthe lips. 4. Occipital, which gives the posterior mastoid. 5. Posterior auricular, which furnishes the stylo-mastoid. 6. Inferior pharyngeal. The external carotid terminates in dividing into the temporal and internal maxillary. Furnishes 1. The transverse artery of 7. Temporal artery. the face. 2. The anterior auricular. 3. The middle temporal. Furnishes 1. Middle meningeal. 2. Inferior dental. 3. Deep posterior temporal. 4. Masseteric. 5. Pterygoidean. S. Internal maxillary 6. Buccal. 7. Anterior deep temporal. artery. 8. Alveolar. 9. Infra-orbital. 10. Vidian. 11. Superior pharvngeal. 12. Superior palatine. 13. Spheno-palatine. I. The lacrymal. 2. Central artery of the retina. 3. Supra-orbital. 4. Posterior ciliary. Furnishes 5. Long ciliary. 6. Superior and inferior 1. Ophthalmic, which givesmuscular. 7. Posterior and anterior ethmoidal. Superior and inferior palpebral. 9. Nasal. i 10. Frontal. 2. Communicating artery of Willis. Choroid artery. 4. Anterior cerebral.

Subclavian artery.	Furnishes 1. The vertebral, which gives— 2. The inferior cerebellic. 3. The basilar, cerebellic. 3. Inferior thyroid, which gives the ascending cervical. 3. Internal mammary, \(\) \(\		
Axillary artery,	Furnishes 1. Acromial. 2. Superior thoracic. 3. Inferior thoracic, or external mammary. 4. Inferior scapular. 5. Posterior circumflex. 6. Anterior circumflex. In continuing it takes the name of brachial.		
Brachial artery.	Furnishes 1. Deep humeral or external collateral. 2. Internal collateral. It divides afterwards into the radial and ulnar.		
I. Radial artery.	Furnishes 1. The radial recurrent. 2. Dorsal artery of the carpus. 3. Dorsal artery of the metacarpus. 4. Dorsal artery of the thumb, and terminates in forming the deep palmar arch.		
2. Ulnar artery.	Furnishes I. The anterior and posterior ulnar recurrent. The anterior and posterior interoseous, which furnishes the posterior radial recurrent. It terminates in forming the superficial palmar arch, which gives the collateral arteries of the fingers.		
3. ARTERIES FURNISHED BY THE AORTA IN THE THORAX.			
 The right and left bronchial. Œsophageal, (four, five, or six in number.) Posterior mediastinal. Inferior intereostals, (eight, nine, or ten in number.) 			
4. ARTERIES FURNISHED BY THE AORTA IN THE ABDOMEN.			
1. Interior right and	left diaphragmatic arteries. [Divided into three branches.		
	1. Coronary of the stomach.		
2. Cæliac ertery.	2. The Hepatic, which gives— 2. The Hepatic, which gives— 3. The Splenic, which gives— 3. The Splenic splenic sinistra.		
	(2. The vasa brevia.		
3. Superior mesenteric artery.	Furnishes from its concavity— 1. The superior middle, and inferior right colic. 2. From fifteen to twenty intestinal branches.		

- 4. Inferior mesenteric artery.

 Furnishes
 1. The superior.
 2. The middle.
 3. The left colic; and divides into the superior hæmorrhoidal arteries.
 - The middle capsular arteries (two on either side).
 - Renal or emulgent.
 - Spermatic.
 - 8. Lumbar (four or five on either side).
- 5. ARTERIES RESULTING FROM THE BIFURCATION OF THE AORTA.

The Aorta furnishes a little before its bifurcation-

1. The middle sacral, and divides into the primitive

iliacs, which are divided iliacs, which are divided 2. The external iliac artery.

Furnishes 1. The ilio-lumbar.

Internal iliac artery.

External iliac artery.

Femoral artery.

1. Întera; .
3. Gluteal.
4. Umbilical.
5. Vesical.
6. Obturator.
7. Middle hæmorrhoidal.
8. Uterine.
9. Vaginal.
10. Ischiatic,
11. Internal pudic, which gives—

(3. Transversus perinæi.
4. Artery of the corpus cavernosum.
5. Dorsalis penis. name of the femoral artery. Furnishes

 External epigastric.
 External superficial and deeply-seated pudics.
 Profunda, which gives—
 The external and internal circumflex.
 The superior middle and internal epigastric perforating arterial extensions. inferior perforating arte-In continuing its course it

takes the name of popliteal.

Furnishes

I. The superior middle, external and internal articular

The inferior internal and external arteries.

3. The anterior tibial; its

continuation is called the dorsal artery of the foot, 2. Metatarsal. which furnishes—

posterior tibial arteries.

3. Interosseous.
4. Dorsal arteries of the great toe. The popliteal is divided into the peroneal, and

Peroneal artery.

Popliteal artery.

2. Posterior tibial artery.

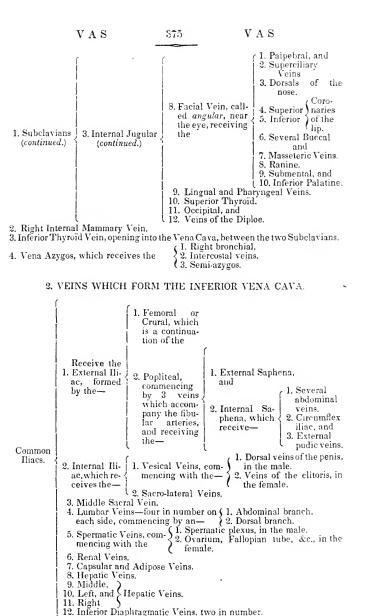

Divided into the anterior and posterior fibular. Divided into internal and external plantar. It forms in anastomosing with the continuation of the anterior tibial, the plantar arch, from which the superior, posterior, in-

ferior, and anterior branches are given off.

TABLE OF THE VEINS.

1. VEINS WHICH FORM THE SUPERIOR VENA CAVA.

1. VERNS WHICH FORM THE SUIERIOR VERA CAVA.			
1. Subclavians.	Receive the 1. Axillary, which	Receives the 1. Basilic, formed 2. Anterior ulnar. 2. Anterior ulnar. 3. Median basilic.	
		2. Cephalic, form- 1. Superficial radial. ing the 2. Median Cephalic.	
		3. Circumflex veins. 4. Inferior scapular. 5. Long thoracic. 6. Superior thoracic. 7. Acromial veins.	
	2. External jugular.	Receives the 1. Internal Maxillary, composed of the do fine 1. Infa-orbitar. 2. Spheno-palatine. 3. Alveolar. 4. Infra-orbitar. 5. Mental. 6. Inferior dental. 7. Deep temporal.	
		2. Superficial Temporal composed of the lars. 3. Transverse of the face.	
		3. Posterior Auricular. The trunk then takes the name of External Jugular, and, in its course along the neck, receives— 4. Cervical Cutaneous. 5. Trachelo-scapular, &c.	
	3. Internal jugular.	ferior Cerebral Veins. 7. Ophthalmic Vein composed of the 1. Lacrymal. 2. Central of the retina. 3. Infra-orbitar. 4. Ciliary. 5. Ethmoïdal. 6. Palpebral, and	
	ł.	[7. Nasal, Veins.	

3. VEINS OF THE HEART.

- Great Right Coronary.
- Small right Coronary.
- 3. Left Coronary Veins.

4. VEINS WHICH FORM THE VENA PORTÆ.

Receives the

1. Veins which correspond to the vasa breviora.
2. Right and left gastro-epiploic.
3. Duodenal, and
4. Pancreatic, veins.
5. Coronary Vein of the Stomach, and
6. Small mesenteric vein. Receives the

Superior Mesenteric Vein.

nus and externus, the middle portion by times, mesentery of the plexus choroïdes, that of cruræus.

2. Velum palati. The soft palate; the

most of its arsenic by repeated roasting.

1. Flowers or calx of zinc. Oxide of ZEDOARY (jcdwar or zadwar, Arab.) zinc, formed by exposing the metal to 1. Flowers or calx of zinc. Oxide of The name given to the tubers of some the air at a temperature a little above its species of Curcuma, the zedoaria longa melting point, when it flies up in the being referred to the C zerumbet; the form of white flowers. It has hence received the fanciful names of philosophical A principle obtained from wool, and nihil album. The ancients called it pompholyx. In Holland, it was ZEOLITES ($\zeta \hat{\epsilon} \omega$, to boil, $\lambda \hat{\iota} \theta o_{S}$, a stone). sold as a secret remedy under the names

2. Tutty or furnace cadmia. Impure oxide of zinc, found in the chimney of ZERO (probably from the Arabic tsa-the furnace in which zinc ores are roastphara, empty). Nothing. It is used to ed, or in which zinciferous lead ores are denote a cypher, and to fill the blank be-smelted. When prepared by levigation

3. Butter of zinc. Chloride of zinc, [ZERUMBET. Cassumuniar. An East also called the muriate or hydrochlorate;

4. White Vitriol. Sulphate of zinc, a

called prepared calamine.
ZINGIBER OFFICINALE. chemical term equivalent to electrolysis, Narrow-leaved Ginger, the rhizome of denoting a mode of decomposition occa- which constitutes the ginger-root of comsioned by the inductive action of the merce. Black ginger is dried, after being scalded, without being scraped; white 2. Zinca-lyte (λόω, to decompose). A ginger, on the contrary, is carefully chemical term equivalent to electrolyte, scraped. It is stated, however, that there denoting a body decomposable by electrare two ginger plants, the white and the tricity, the decomposition being referred black. The annual shoots put forth from to the action of zinc or the positive metal. the perennial rhizome are used for mak-Zincous element. The basic or posi-ling preserved ginger.

Zingiber Cassamunar. This is perhaps the plant which yields the cassamunar

ZIRCONIUM. The metallic basis of of sulphuret, or hlende or black jack; of zirconia, a substance found in the jargon carbonate, or calamine; of sulphate, or or zircon from Ceylon, and in the red

ment of the ovum. By Wagner it is termed chorion.

layer which connects the anterior margin to the highest crustacea, a double ner-

the lens.

ZONULE OF ZINN. The name given body. to an assemblage of membranous folds or laminæ observed in the hyaloid mem-the nervous system is more concentrated brane, which project outwards, and are around the entrance to the alimentary dove-tailed, as it were, with the ciliary canal in the molluscous classes, where it processes.

ZOOGONY (ζῶον, an animal, γονη, ganglia, disposed around the esophagus. generation). "Zoognie;" a term under 4. Spini cerebrata. This division emwhich M. Serres treats of the laws, which braces the vertebrated classes, in which

are two in number, viz.

 The law of Symmetry, which is designated as "the principle of the double 1. Zoo-gony (yorn, generation). The developement of the organs." This prin-science which treats of the formation of ciple is also observed in the progress of organs. ossification, the external parts of bones being first visible, and the interior and branch of Natural History which treats central parts being composed of produc- of animals. tions from these. In consequence of this eccentric progress, the double develope- by Thenard to be merely the acetous, ment of the single parts, which compose holding animal matter in solution. the centre of the skeleton, is effected; and hence arises the law of symmetry, by ence which treats of the laws of organic which, with a few exceptions, the two life. sides of the skeleton correspond with each other.

2. The law of "Conjugaison," which is designated as "the principle of their tomy or dissection of animals. Thus, the intestinal canal is said to be "un canal de conjugaison, résultant de la double engrenure, antérieure animal kingdom, considered by Cuvier et postérieure, de ses lames qui les constituent primitivement." This principle is also observed in the formation of the δέρμα, a skin). Having a spinous skin, as various cavities, holes, and canals, which the star-fish, sea-urchin, &c. are found in the bones, and which are supposed to be produced by a union of Intestinal animals, as the tænia, &c. what were originally separate parts.

ZOOLOGY ($\tilde{\chi}\tilde{\omega}o\nu$, an animal, $\lambda\delta\gamma\sigma$, a nettles, as the medusa, polypus, &c. description). That branch of Natural History which treats of animals. A sketch Many-footed animals, as the hydra, &c. of Cuvier's arrangement is given in the Appendix. The following primary divi-fusory animalcules, found in infusions or sions of the Animal Kingdom have been stagnant water, as the monas, &c. derived from the modifications of the nervous system observed in the living ignea. Shingles; a species of Herpes, so

economy of animals.

1. Cyclo-neura. This division exhibits like a belt. See Shingles. the nervous system in the radiated or body.

2. Diplo-neura. In this division, comprising the articulated classes, there is ZONULA CILIARIS. A thin vascular observed, almost from the lowest entozoa of the retina with the circumference of your chord or column, reaching along the whole of the ventral surface of the

> Cyclo-gangliata. In this division generally forms a transverse series of

he supposes to regulate the formation of the central parts are in the form of a the organs, or according to which the lengthened dorsal nervous chord, dedifferent parts of which they are comveloped anteriorly into a brain, and proposed seem to be produced. These laws

Zoo-nomia (νόμος, a law). The sci-

 Zoo-phyla (ψύτον, a plant). A class of animals resembling plants.

The ana-Zoo-tomy (τομη, section).

ZOOPHYTA (ζωον, an animal, φύτον, a plant). Animal plants; a division of the as synonymous with the Radiata.

Echino-dermata (ἐχῖνος, a hedgehog,

Ento-zoa (ἐντὸς, within, ζωὴ, life).

3 Acalephæ (ἀκαλήφη, a nettle).

Polypi (πολύς, many, πούς, a foot).

5 Infusoria (infundo, to pour in). In-

ZOSTER (ζωστήρ, a belt). Zona; zona termed from its surrounding the body,

ZUMIC ACID (ζύμη, leaven). An acid lowest classes; it is here found in the discovered in vegetable substances which form of filaments, disposed in a circular have undergone the acetous fermentamanner around the oral extremity of the tion: it has been shown that it closely resembles the lactic (acetic) acid.

temporal and cheek-bones.

1. Zygomatic process. A thin, narrow distortor oris has been applied to them. projection of bone, bounding the squa- ZYGOPHYLLACEAE. The Bean mous portion of the temporal bone at its Caper tribe of Dicotyledonous plants.

into the angle of the mouth

3. Zygomaticus minor. A muscle arising a little higher upon the check-bone, gliadine form the constituent principles and inserted into the upper lip, near the of gluten. See Gluten,

ZYGO'MA (ζυγός, a yoke). The arch/angle of the mouth; it is often wanting. formed by the zygomatic processes of the These muscles raise the angles of the mouth, as in laughter; hence the term

Trees, shrubs, and herbaceous plants. 2. Zygomaticus major. A muscle aris- with leaves opposite; flowers polypetaing from the cheek-bone, and inserted lous, symmetrical; stamens hypogynous; ovarium many-celled; fruit capsular.

ZYMOME (ζύμη, leaven). This and

APPENDIX.

AFFIXES. In this article are exhibited the principal affixes or terminations of words, in connexion with their compounds. By such a classification, in which a series of words presents one part common to all, the memory is assisted, and the difficulty arising from technical terms considerably lessened. It is obvious that these affixes could not be introduced into the body of the work; indeed, they constitute a separate study.

ÆRESIS (αἵρεσίς, a taking of any thing; from aίρέω, to take). A termination de-cines which induce a flow of saliva. noting a removal of a part.

Aph-æresis, (dπò, from). The remov-cines which promote a flow of saliva.

ing of any diseased part.

Di-æresis (διὰ, throughout). A solution

or breach of continuity.

Ex-æresis (ἐξ, out). An old term, denoting the removal of a part.

-AGOGA, -AGOGUES (ἀγωγὸς, one who leads; from ἄγω, to lead or drive). A termination denoting substances which expel others. Hence-

Chol-agagues (χολή, bile). Purgatives which produce bilious discharges.

Copr-agogues, (κοπρὸς, fæces). cines which quicken the passage of the the hip, or hip-gout.

Emmen-agogues (ἐμμήνια, the menses). Medicines which promote the catamenial discharge.

Ham-agogues (alua, blood). Medicines which promote the catamenial and hæmorrhoïdal discharges.

Helminth - agogues (ελμινς, ελμινθος, a worm). Remedies for expelling worms; ant-helminties.

which produce watery evacuations.

Lith agogues (λίθος, a stone). Antilithics. Medicines which expel or dissolve calculus.

Panchym-agogues (πᾶς, all, χυμός, chyme). Medicines which cause evacuations mixed with humours of the intestinal canal.

Pant-agogues (π á ν τ a, plural of π ã ς , all). Medicines which expel all morbid mat- of the bowels or intestines.

Phlegm-agogues (φλέγμα, phlegm). Me-lin the stomach. dicines which produce glairy evacuations.

Ptyal-agogues (πτύαλον, saliva). Medi-

Sial - agogues (σίαλος, saliva).

-AGRA (ἄγρα, seizure). A termination denoting a seizure or pain; generally ap-

plied to gout. Hence-Cheir-agra (χείρ, the hand).

of the hand; gout in the hand. Cleis agra (κλείς, the clavicle). Seizure

or gout in the clavicle. Gloss-agra (γλῶσσα, the tongue).

zure of the tongue; swelled tongue. Gony-agra (γόνν, the knee). Genugra:

gout in the knee. Ischi-agra (ἰσχίον, the hip). Seizure of

Ment-agra (mentum, the chin). sis; an eruption about the chin.

Odont agra (δόοθς, δόδντος, a tooth). Seizure, or gout in the teeth.

Om-agra (δμος, the shoulder). Seizure, or gout in the shoulder.

Pod-agra ($\pi \circ \tilde{v}_{S}$, $\pi \circ \delta \tilde{\sigma}_{S}$, the foot). Seizure, or gout in the foot.

 -ALGIA (ἄλγος, pain). A termination Hydr-agogues (ὕδωρ, water). Medicines denoting, like odynia, the presence of pain. Hence-Cardi-algia (καρδία, the heart, the en-

trance into the stomach). Pain in the stomach; heart-burn. Cephal-algia (κεφαλή, the head).

in the head. Cox-algia (coxa, the hip or haunch),

Pain in the hip or haunch. Enter-algia ($"
u
u
\tau
\epsilon
\rho
a$, the bowels).

Gastr-algia (γαστήρ, the stomach). Pain

Gony-algia (γόνυ, the knee). Pain, or gout, in the knee.

Hepat-algia (ζηπαρ, ζηπατος, the liver).

Pain in the liver.

Hyster-algia (ὑστέρα, the uterus). Pain

in the uterus.

Ischi-algia (ἰσχίον, the hip or haunch), ing intestine and omentum. Pain of the hip or haunch; a classical term, identical with the barbarous term mour, or hernia, of the omentum. cox-algia.

of the kidney, from calculus. Neur-algia (νεθρον, a nerve). Nerve-lihe scrotum.

ache; pain in a nerve.

sickness; a desire to return to one's country. Odont-algia (δδούς, δδόντος, a tooth).

Toothache; pain in the teeth.

Ot-algia (οὖς, ἀτὸς, the ear). pain of the ear.

Pain of the sternum.

Pleur-algia ($\pi\lambda \varepsilon v \rho a$, the side). or ache, in the side.

Proct-algia (πρωκτός, the anus).

or derangement about the anus.

Prosop-algia (πρόσωπον, the face).

douloureux, or neuralgia of the face. Rhachi-algia (ράχις, the spine). Spineache; backbone ache; painters' colic.

Splen-algia ($\sigma\pi\lambda\dot{\eta}\nu$, the spleen).

in the spleen. Stern-algia (sternum, the breast-bone).

-CARDIA (καρδία, the heart). A termination denoting the heart. Hence-

plied to animals without a heart. Hydro-cardia (ὕδωρ, water). Hydropericardia. Dropsy of the pericardium.

brane which surrounds the heart.

-CELE (κήλη, a tumour). A termina- of the uterus. tion denoting a tumour, particularly that of hernia. Hence-

Broncho-cele (βρόγχος, the windpipe). Goitre. A tumour of the thyroïd gland.

Bubono-cele (βουβών, βουβώνος, the sarcocele, containing fat. groin). A tumour in the groin; inguinal hernia.

Cerato-cele (κέρας, κέρατος, cornea). Hernia of the cornea.

Cirso-cele (κίρσος, varix). A varicose tumour of the spermatic vein. Colpo-cele (κόλπος, the vagina). A tu-

mour, or hernia, in the vagina.

Cysto cele (κύστις, the bladder). Hernia of the bladder.

Elytro-cele (ελυτρον, a sheath; the vagina). Vaginal hernia; hernia within the os externum.

Encephalo-cele (ἐγκέφαλος, the brain). Hernia of the brain.

Entero-cele ($\tilde{\epsilon}\nu\tau\hat{\epsilon}\rho\alpha$, the intestines). A hernia containing intestine.

Entero-epiplo-cele (ἔντερα, intestines, έπίπλοον, omentum). A hernia contain-

Epiplo-cele (ἐπιπλοον, omentum). A tu-

Epipl-oscheo-cele (ἐπιπλοον, omentum, Nephr-algia (νεφρός, the kidney). Pain ὄσχεον, scrotum). A hernin, in which a portion of the omentum descends into

Gastro-cele ($\gamma a \sigma \tau \eta \rho$, the stomach). Nost-algia (νόστος, a return). Home-tumour, or hernia, of the stomach.

Closso-cele (γλῶσσα, the tongue). extrusion of the tongue.

Hæmato-cele (αίμα, αϊματος, blood). tumour of the scrotum, or spermatic cord, Earache; caused by blood.

Hepato-cele (ηπαρ, ηπατος, the liver). A

Pain, tumour, or hernia, of the liver.

Hydr-encephalo-cele (ὕδωρ, water, ἐγκέ-Pain, φαλος, the brain). Watery rupture of the brain.

> Hydr-entero-cele (ΰδωρ, water, ἔυτερα, the intestines). Hydrocele, complicated

with intestinal hernia.

Hydro-cele (ΰδωρ, water). A tumour Pain containing water; a collection of water in the tunica vaginalis, &c.

Hydro-physo-cele (ὕδωρ, water, φυσάω, to inflate). Hernia, complicated with hydrocele; hernia containing water and

Hydro-sarco-cele (ὕδωρ, water, σὰρξ, A-cardiac (a. privative). A term ap- σαρκός, flesh). Sarcocele, attended with dropsy of the tunica vaginalis.

Hypo-gastro-cele (ὑπὸ, beneath, γαστήρ, the stomach). Ventral hernia; occurring Peri cardium (περὶ, around). The mem-in front of the abdomen, generally between the recti muscles.

Hystero-cele (ὑστέρα, uterus). Hernia

Ischiato-cele (ἰσχίον, the hip) tinal rupture through the sciatic liga-

Liparo-cele (λιπαρός, fat). A species of

Mero-cele (μηρός, the thigh). Hernia

of the thigh; femoral hernia. Muco-cele (mucus). More properly, myxo-cele. Hernia of the lacrymal sac,

containing tears and mucus. Omphalo-cele (ὁμφαλὸς, umbilicus). Ex-

omphalos; hernia of the bowels at the umbilicus.

Oscheo-cele (οσχεον the scrotum). hernia which has descended into the scrotum.

Pneumato-cele (πνεύμα, πνεύματος, wind). Hernia distended with flatus.

Sarco-cele (σάρξ, σαρκός, flesh). enlargement of the testis.

Scroto-cele (scrotum, the cutaneous envelope of the testes). Hernia, or rupture brane which covers the cranium. of the scrotum.

Spermato-cele (σπέρμα, σπέρματος, senien).

to be produced by semen. Steato-cele (στέαρ, στέατος, suet). A her-

into the scrotum.

vein). An enlargement of the blood-ves- &c. sels of the scrotum.

-CEPHALUS (κεφαλή, the head). termination of words denoting some affection of the head, &c. Hence-

A-cephalus (a, privative). Headless; a

class of molluscous animals.

Anen-cephalus (α, priv., ἐγκέφαλος, the brain). A monster without brains.

Bothrio-cephalus (βόθριον, a pit). name of the broad tape-worm.

En-cephalon (èv, within). The brain.

Hence en cephalitis, &c.

Hydr-encephalus (ὕδωρ, water, ἐγκέφαλος, the brain). Dropsy of the brain.

whale. Meso-cephalon (μέσος, middle). A de-

signation of the pons Varolii.

Myo-cephalon (μυῖα, a fly). prolapsus of the iris, of the size of a fly's to use the word aden-enteritis, from άδην, head.

Notencephalus.

Poly-cephalus (πολύς, many). headed; the name of a hyatid.

Tricho-cephalus (θρίξ, τρικός, hair). The long thread-worm, which terminates in a brane in the middle of the intestines. hair-like point.

denoting glue. Hence-

Chryso-colla (χρυσός, gold). Golden-

glue; the Greek name for borax. Ichthyo-colla (ἰχθὸς, ἰχθύος, a fish). Fish-

glue; isinglass.

Sarco-colla (σάρξ, σαρκός, flesh). Fleshglue; the concrete juice of the Pensea A medicine which produces insensibility. sarcocolla.

-CRANIUM (κρανίον, the skull). termination denoting the bead or the skull. Hence-

Epi-cranium (ἐπί, upon). The inte-former name of the choroid. guments, &c.; which lie over the cra-

Hemi-crania (ημισυς, half). A pain affecting only one side, or half, of the synonymous with pteryg-oid; processes of

Ole-cranon (ωλένη, the ulna). head of the ulua, or the elbow.

Peri-cranium (περὶ, around). The mem-

-DEMIC (δημος, a people). A termina-An enlargement of the testes, supposed tion of words denoting diseases peculiar to certain localities. Hence-

En-demic (èv, in, among). nia, in which sebaceous matter descends peculiar to people of a particular country.

Epi-demic ($\hat{\epsilon}\pi\hat{\iota}$, upon). Diseases arising Varico-cele (varix, varieis, a distended from a general cause, as excessive heat,

> Pan-demic ($\pi \tilde{a} \nu$, all). A term synonymous with epidemic.

> -DIPSIA (δίψα, thirst). A termination denoting thirst. Hence-

> A-dipsia (a, privative). The total absence of thirst,

Phobo-dipsia (φόβος, fear). A term synonymous with hydrophobia, expressive of the fear which the patient experiences to allay his thirst.

Poly-dipsia (πολύς, much). Excessive

thirst.

-ENTERY (ἔντερα, the bowels; from Macro-cephalus (μακρός, great). Large- έντός, within). A termination of words headed; the name of the spermaceti denoting some affection of, or part connected with, the bowels. Hence-

Dothin-enterite (δοθινή, a pustule). Inflammation of the mucous follicles of A small Peyer and Brunner. It would be better a gland.

Dys-entery (đòs, with difficulty). In-Many flammation of the mucous lining of the

large intestines.

Mes-entery (μέσος, middle). The mem-

-FACIENT (facio, to make). -COLLA (κόλλα, glue). A termination mination denoting the production of any particular effect. Hence— Cale-facient (caleo, to be warm).

medicine which causes warmth.

Rube-facient (rubeo, to be red). stance which induces redness.

Stupe-facient (stupeo, to be senseless).

·FORM (forma, likeness). A Latin A termination, denoting resemblance, and synonymous with the Greek term oid.

Acini-form (acinus, a grape-stone). A

Aëri-form (aër, aëris, air). Air-like; a term applied to gases. Ali-form (ala, a wing). Wing-like;

the sphenoid bone. Arci-form (areus, a bow). Bow-like;

a term applied to some fibres of the brain.

Hinge-like, as applied to a species of diarthrosis. articulation; also termed ginglymoid.

Spoon-like, as applied to a process of the creted in abscesses, &c.

tympanum.

as applied to the aponeurosis of the dia-also called pyramidalis. phragm.

Cribri-form (cribrum, a sieve). Sieve- a process of the medulla oblongata. like; a term applied to the plate of the

ethmoïd boue.

Cunei-form (cuneus, a wedge). Wedgelike; the designation of several bones of

Digiti-form (digitus, a finger). Fingerlike; applied to certain appendices or a bone of the carpus. prolongations of the intestines.

Ensi-form (ensis, a sword). like; synonymous with xiph-oid; a car-

tilage of the sternum.

Falci form (falx, falcis, a scythe). Scythe-like; a process of the dura

Fili-form (filum, a thread). Threadlike; applied to some of the papillæ of the tongue.

Fungi-form (fungus, a mushroom). pillæ of the tongue.

Gelutini-form. Resembling gelatine; as applied to a species of tuberculous in-mintic; a remedy for worms.

filtration in the lungs. Glundi-form (glans, glandis, a gland).

Hypocrateri-form (ὑπὸ κρατὴρ, a wittecup). Salver-shaped; as applied to the corolla of various plants.

Infundibuli-form (infundibulum, a funnel). Funnel-shaped; a ligament of the mity.

occiput and the first vertebra.

applied to the arrangement of the cells m the medullary rays of plants.

Myrti-form (myrtus, a myrtle). Myrmains of the lacerated hymen.

Pampini-form (pampinus, a tendril).

Pectini-form (pecten, pectinis, a comb or crest). Crest-like; as applied to the generation, in which the fœtus was sup-

septum of the corpus cavernosum. Penicilli-form (penicillus, a painter's tion of matter afforded by both sexes. Brush-like; as applied to the

disposition of tilaments, &c.

the shape of certain muscles.

Pisi-form (pisum, a pea). Pea-like; the designation of a bone of the carpus. Plani-form (planus, plane). Of a plane by external increase.

Cardini-form (cardo, cardinis, a hinge), kind; as applied to the obscure or close

Puri-form (pns, matter). Resembling Cochleari-form (cochleare, a spoon), pus; as applied to certain matters se-

Pyri-form (pyrus, a pear). Cordi-form (corda, a cord). Cord-like, shaped; a muscle of the sacrum, &c.;

Resti-form (restis, a cord). Cord-like;

Reti-form (rete, a net). Net-like; a designation of the erectile spongy tissue of the vagina.

Scuti-form (scutum, a shield). Shieldlike; a cartilage of the sternum.

Unci-form (uncus, a hook). Hook-like;

Ventri-form (venter, the belly). Belly-

Sword-shaped; the form of certain muscles. Vermi-form (vermis, a worm). Wormlike; two processes of the brain.

> -FUGE (fugo, to expel). A termination denoting a substance which expels another substance, or a disease. Hence—

> Febri-fuge (febris, a fever). A remedy against fever.

Lacti-fuge (lac, lactis, milk). A medi-Fungus-like; applied to some of the pa-cine which checks or diminishes the secretion of milk.

Vermi-fuge (vermis, a worm). Anthel-

-GEN, -GENESIS, -GENOUS, &c. Gland-like; a term applied to the thymus (γένος, birth, γένεσις, generation; from body.

γεννάω, to produce). Terminations denoting production, or generation.

Acro-genous (ἄκρος, at the top). Topgrowing; as applied to plants which grow by extension of their upper extre-

Campho-gen. Camphene; the basis of Muri-form (murus, a wall). Wall-like; camphor, or pure essence of turpentine. Cephalo-gencsis (κεφαλή, the head). The

doctrine of the formation of the brain. Cyano-gen (κύανος, blue). Bi-carburet tle-formed; the designation of the re- of nitrogen; an ingredient in Prussian

blue. Endo-genous (ἔνδον, within). Inside-Tendril·like; a plexus of the spermatic growing; as applied to plants which grow by internal increase.

> Epi-genesis ($\varepsilon \pi i$, upon). A theory of posed to be produced by the joint produc-

Erythrogen (ερυθρός, red). A substance sometimes found in the gall-bladder, Penni-form (penna, a pen). Pen-shaped; which produces a red compound with nitrogen.

Exo-genous ($\xi \omega$, outward). growing; as applied to plants which grow

Halo-gen ($\mathring{a}\lambda_{5}$, salt). A body which count of the rules to be observed in forms salt with metals, as chlorine.

Hetero-geneous (ετερος, different). Substances consisting of parts of a different kind.

Homo-geneous (δμός, similar). stances consisting of parts of a similar tual state. Hence-

Hydro-gen (νόωρ, water). A gas which habit of body. enters into the formation of water.

Indi-genous (indigena, a native). Pe- diathesis. culiar to a country, as certain diseases.

Indigo-gen. The name applied to de-

oxidated indigo. Myxo-gen (μύξα, mucus). The desig-the act of taking. Hencenation, by M. Blaud, of that form of croup which is characterized by the discharge strength after sickness. of mucus. When the principal effect is pus, he terms it puo-gen (πύον, pus); if modic attack of the limbs, retaining them attended by the production of a false in one position. membrane, meningo-gen μήνιγξ, a membrane).

Nitro-gen (νίτρον, nitre). A gas, so called from its generating nitre.

of bones.

Oxy-gen (όξὺς, acid). A gas, so called from its being supposed to be the cause or description of the glands.

of acidity. Phos-gene ($\phi \tilde{\omega}_{\varsigma}$, light). A designation tion of the causes of disease. of chloro-carbonous acid, from the pecuthe combination.

Xantho-gen (ξανθός, yellow). The name of the radical of hydroxanthic acid from scription of the joints, its yellow compounds.

Zoo-gony (ζῶον, an animal). The science A treatise on food. which treats of the formation of the organs of animals.

-G NOSIS (γνῶσις, knowledge, from description of cartilages. γινώσκω, to know). A termination denoting knowledge. Hence—

Dia-gnosis (διà, a preposition sometimes denoting distinction). Distinction description of the embryo. of diseases.

Pro-gnosis ($\pi\rho\delta$, before). knowledge; the foreseeing of what will occur in diseases.

 -GRAPHY (γραφη, writing or painting, from γράφω, to write). A description of history of the blood. any thing, properly in writing or painting. Hence-

Adeno-grophy (άδην, a gland). A description of the glands.

Crystallo-graphy (κρύσταλλος, ice; a crystal). The science which investigates description of fishes. the forms of crystals.

Osteo-graphy (ὀστέον, a bone). A de- air). scription of the bones.

Phyto-graphy (φυτόν, a plant). An ac- or inorganic substances.

naming and describing plants.

-HEXIA (ἕξις, a habit, from ἔχω, to have the mind, or body, in a certain Sub-state). A termination denoting a habi-

Cac-hexia (κακός, bad). A bad state or

Ost-hexia (ὀστέον, a bone). An ossific

-LEPSIS (ληψις, a taking, from λαμβάνω, to take). A termination denoting

Ana-lepsis, (àvà, again). Recovery of

Cata-lepsis (κατά, thoroughly). A spas-

Epi-lepsis, (ἐπὶ, upon). The falling

sickness. Morbus caducus.

-LOGY (λόγος, an account). A termi-Osteo-geny (ὀστέον, a bone). The growth nation denoting a treatise or description of any thing. Hence-

Adeno-logy (άδην, a gland). A treatise

Ætio-log y (aiτία, a cause). A descrip-

Angeio-logy (ἀγγεῖον, a vessel). A deliar effect of the sun-beams in producing scription of the vessels, or of the vascular system.

Arthro-logy (ἄρθρον, a joint).

Bromato logy (βρῶμα, βρώματος, food).

Bursa-log y (βύρσα, a hide). A description of the bursæ mucosæ.

Chondro-log y (χόνδρος, cartilage).

Cranio-logy (κρανίον, the skull). A description of the skull. Embryo-logy (ἔμβρυον, an embryo).

Entomo-logy (ἔντομον, an insect).

Previous description of insects.

Glosso-logy ($\gamma\lambda\tilde{\omega}\sigma\sigma a$, the tongue). An explanation of the terms employed in any science.

Hæmato-log y (αἶμα, αἵματος, blood). The

Helmintho-logy (ἔγμινς, ἕγμινθος, worm). A description of worms.

Herpeto-log y (έρπετὸς, a reptile). A description of reptiles.

Ichthyo-logy (iχθύς, iχθύας, a fish).

Meteoro-logy (μετέωρος, floating in the

The doctrine of meteors.

Minera-logy. The science of minerals,

Myo-logy ($\mu \tilde{v}_{\varsigma}$, $\mu v \tilde{o}_{\varsigma}$, a muscle). scription of the muscles.

Νευνο-logy (νεθρον, a nerve). A' description of the nerves.

Noso-logy (νόσος, a disease). An ar-moniacal possession.

rangement of diseases. Örnitho-logy (ὄρνις, ὄρνιθος, a bird).

description of birds.

Osteo-log y (ὀστέον, a bone). A descrip- Lascivious madness in females. tion of the bones.

Pathology ($\pi \acute{a}\theta o_{\varsigma}$, a disease). scription of diseases.

Pharmaco logia (φάρμακον, a medicine). The method of administering medicines.

description of the mind as discovered by

the formation of the skull.

Physio-logy (φύσις, nature). An account of the nature, or functions of the body.

Phyto-logy (φυτον, a plant). A descrip-light.

tion of plants.

count of the quantity, or of doses, of me-the mean bulk of gases.

Semeio-logy, (σημεῖον, a sign).

doctrine of the signs of disease.

Sitio-logy (σιτίον, food). A treatise on food.

Spasmo-log y (σπάσμα, a spasm). A trea-substance. tise on spasms or convulsions

Splanchno-logy, (σπλάγχνον, a viscus).

A description of the viscera.

Symptomato-logy (σύμπτωμα, a symptom). A description of the diagnosis, or ment for measuring the weight of the air; symptoms of diseases.

Syndesmo-log y (σύμδεσμος, a ligament). A description of ligaments.

Toco-logy (τόκος, child-birth).

science of midwifery. Toxico-log y (τοξικόν, a poison). An ac-

count of poisons.

Zoo-log y (ζῶον, an animal). A history of the animal kingdom.

 LYSIS (λύσις, a solution, from λύω, to resolution, &c. Hence-

Ana-lysis (dvà, again). The resolution of a compound into its constituent parts. Cata-lysis, (κατά, downwards).

composition by contact.

continuity in any part. hence kore-dialysis, the operation for ar-gravity of fluids. tificial pupil, by separation.

Electro-lysis. Decomposition by means ment for measuring the degree of mois-

of electricity. Para-lysis (παρὰ, throughout).

Palsy; a relaxation of nervous energy.

A de-|vouat, to rage). A termination denoting madness. Hence-

Damono-mania (δαίμων, δαίμονος, a demon). Madness from supposition of de-

Mono-mania (μόνος, alone).

Madness A upon one subject only.

Nympho-mania (νύμφη, the nympha).

Typho-mania (τύφος, stupor, typhus). A de-Perfect lethargy of body, with partial lethargy of mind.

-METER (μέτρον, a measure). A ter-Phreno-log y (φρὴν, φρενός, the mind). A mination denoting a measurer. Hence— Aceto-meter (acetum, vinegar). An instrument for measuring the strength of

> vinegar. Actino-meter (ἀκτὶν, a ray of light). An instrument for measuring the intensity of

Aëro-meter (άὴρ, ἀέρος, air). An air-Poso-logy, (πόσος, how much). An ac-[measurer; an instrument for ascertaining

Alcoho-meter (alcohol, essence). A mea-The surer of the spirit contained in any vinous

liquid.

Alkali-meter. An instrument for measuring the quantity of alkali in a given

Atmo-meter (ἀτμὸς, vapour). An instrument for measuring the quantity of exhalation from a moist surface.

Baro-meter (βάρος, weight). An instrua weather-glass.

Calori-meter (calor, heat). An instrument for measuring the heat of a body as

The it cools. Clino-meter (κλίνω, to incline). An instrument for measuring the dip of mineral

> strata. Electro-meter (ηλεκτρον, amber. See Electricity). An instrument for measuring the intensity of electricity.

Eudio-meter (εὐδία, calm weather). An A termination denoting solution, instrument for measuring the proportion

of oxygen in a given gas.

Gonio-meter (γωνία, an angle). An instrument for measuring angles, as those

De- of crystals, &c.

Hydro-meter (νόωρ, water). An instru-Dya lysis ($\delta(a)$, through). A solution of ment for measuring the strength of any A loosening; spirit, in distillation; or for measuring the

Hygro-meter (δγρός, moist). An instru-

ture of the atmosphere.

Eno-meter (olvos, wine). A measurer of the wine contained in any vinous liquid.

-MANIA ($\mu\alpha\nu(\alpha)$, madness, from $\mu\alpha(\epsilon)$ Photo-meter ($\phi\tilde{\omega}_{S}$, $\phi\omega\tau\delta_{S}$, light). An in-

strument for measuring the degrees of like; the name of two cartilages of the

intensity of light.

examination of the chest, &c. Pyro-meter (πῦρ, πυρὸς, fire). An in-

strument for measuring the degrees of bling the chorion, a tunic of the eye.

high temperatures.

Saccharo-meter (σάκχαρον, sugar). instrument used in distillation, for mea-their resembling the knobs of a bedstead. suring the quantity of saccharine matter in the wash.

Sphygmo-meter (σφυγμός, the pulse). foraming of the occipital bone. An instrument for measuring the pulsa-

tions of the arteries.

An in-Thermo-meter ($\theta \dot{\epsilon} \rho \mu \eta$, heat). heat in any body.

-ODYNE', -ODYNIA (ὁδύνη, pain). termination denoting pain. Hence,

An-odyne (a, privative). Without pain;

a remedy against pain.

Arth-odynia (ἄρθρον, a joint). Pain in

Cephal-odynia (κεφαλή, the head). Head-

ache; pain in the head.

Gastr-odynia (γαστηρ, the stomach). Pain in the stomach.

Mast-odynia (μαστός, the breast). Pain of the breast, in women.

Oneir-odynia (ὅνειρος, a dream). Dis- nalis,

turbance during sleep.

Pain in the eye.

Pleur-odynia (πλευρά, the side). Pain, or ache, in the side.

-OID (εξόος, likeness, from εξόομαι, to testis, resemble; οξόα, perf.) A suffix, signifying resemblance. (The termination in a bone of the nose; synonymous with odes denotes sometimes a fulness, as in cribri-form. hæmat-odes, ass-odes, &c.; when it expresses resemblance, it coincides with a cavity; as the socket of the shoulderthe terms in oides, and is probably formed joint, &c. from it.) Hence,

Aden-oid (aδην, a gland).

a gland.

Alkal-oid (alkali). A new substance culations.

resembling an alkali.

Sausage-like; the name of a membrane scribed by Berzelius. of the fœtus.

Ancon-oid (άγκων, the elbow). sembling the elbow; a process of the ous humour of the eye.

process of the scapula.

Arachn-oid (apaxvns, a spider). Cobweb-like; a membrane of the brain.

Arytæn-oïd (apérawa, an ewer). Ewer- Hy-oïd (the Greek letter v). A bone

larynx.

Plexi-meter (πληξις, percussion). An Chel-oïd (χέλνς, a tortoise). Cancr-oïd. instrument for measuring percussion, in a disease of the skin, resembling a tortoise's shell.

Chor-oid (χωρίον, a domicile). Resem-Clin-oid ($\kappa \lambda i \nu \eta$, a bed). The processes

An of the sella turcica are so called from Condyl-oïd (κόνδυλος, a knuckle). Resembling a knuckle; applied to some

Corac-oïd (κόραξ, κόρακος, a crow). Crowlike; a process of the scapula.

Coron-oid (κορώνη, a crow). The name strument for measuring the degree of of a process of the ulna, shaped like a crow's beak.

Cotyl-oïd (κοτύλη, an old measure). A A designation of the acetabulum, resembling an ancient cup.

Cric-oid (κρίκος, a ring). Ring-like, or

annular; a cartilage of the larynx.

Cub-oïd (κύβος, a cube). Cube-like;

the name of a bone of the foot. Delt-oid (δέλτα, the Greek letter Δ).

Delta-shaped; a muscle of the humerus. Derm-oid (δέρμα, skin). Skin-like; a

tissue which resembles skin. Elytr-oïd (ἔλυτρον, a sheath; the vagina). Sheath-like; as the tunica vagi-

Encephal-oid (ἐγκέφαλος, the brain). Α Ophthalm-odynia (οφθαλμός, the eye). term applied to encephalosis, a morbid product resembling brain.

Erythr-oid ($\dot{\epsilon}\rho\nu\theta\rho\dot{\sigma}_{5}$, red). Of a red appearance; a term applied to the cremasteric covering of the spermatic cord and

Ethm-oïd (ήθμὸς, a sieve). Sieve-like;

Glen-oïd (γλήνη, a cavity). Resembling

Ginglym-oïd (γιγγλυμός, a hinge). Resembling Hinge-like; a term synonymous with cardiniform, and applied to certain arti-

Hal-oïd (äλς, the sea). The designa-Allant-oid (άλλᾶς, άλλάντος, a sausage), tion of certain salt-like compounds, de-

Hyal-oïd (ναλος, glass). Glass-like;

Re-the membrane which contains the vitre-

Hydr-encephal-oid (ΰδωρ, water, εγκέ-Ancyr-oïd (ἄγκυρα, an anchor). Anchor- φαλος, the brain). The name of certain like; a former designation of the coracoïd affections which resemble hydrencepha-

lus. Hydrop-oïdes (ΰδωρ, water). A term formerly applied to watery excrements. situated between the root of the tongue and the larynx.

Lambd-o'dal (lambda, the Greek letter which tips the sternum.

Resembling the letter lambda; a suture of the skull.

worm). The name of a long, round, into call this lumbrici-form.

Mast-oid (μαστός, the breast). Breastlike; applied to a process, &c., of the lid). Inflammation of the eye-lid.

temporal bone.

Melan-oïd (μέλας, black). Of a black dropsy of the eye. appearance, as applied to melanosis.

My-cides (μῦς, μυὸς, a muscle). sembling a muscle; hence platysma my-leye. oides, a designation of the musculus cutaneus.

Odont-oïdes (όδοὺς, όδόντος, a tooth).

vertebra, or the dentata.

Ov-oïd (ovum, an egg). Egg-shaped,

as applied to the testis.

Phlegmon-oïd (ψλεγμονή, phlegmon). Resembling a phlegmon, as applied to eye; shortening of the upper lid.

some kinds of abscess.

Psall-oid ($\psi \dot{a} \lambda \lambda \omega$, to play upon the of the eye-lids; tinea, &c. lyre). Lyre-like; a term applied to a

Pteryg-oïd (πτέρυξ, a wing). Winglike; the name of a process of the sphe-

Rhomb-oidal (μόμβος, a rhombus). Resembling a rhombus; the name of a ligament of the clavicle.

Scaph-oid (σκαψή, a skiff). Resembling a skiff; a bone of the tarsus and carpus.

Sesam-oid (σησάμη, an Indian bean). Resembling the semen sesami; applied

Sigm-ord (sigma, the Greek letter Σ). to a flexure of the colon, and valves of powder as black as an Ethiop. the aorta.

Sphen-oïd (σφὴν, a wedge). Wedgelike; the name of a bone of the skull.

a process of the temporal bone. Thyre-oid (θυρεός, a shield). Shield-

like; synonymous with scuti-form; a cartilage of the larynx. Trapez-oid (τράπεζα, a table). Resem-

bling a trapezium, or table; the name of a bone of the carpus.

Troch-oides (τρόχος, a wheel). Wheellike; a rotatory kind of articulation.

Typh-oid (τύφος, typhus, or stupor). Resembling typhus; a class of diseases.

Variol-oid (variola, small-pox). sembling variola; a class of diseases.

Xiph-oid (ξίψος, a sword). Sword-like; synonymous with ensi-form, a cartilage

-OPHTHALMOS (ὀψθαλμὸς, the eye). Lumbric-oides (lumbricus, the earth- A termination of words denoting some affection of the eye. Ophthalmia, or intestinal worm. It would be more correct flammation of the eye, is also used as an affix. Hence,

Blephar-ophthalmia (βλέφαρον, an eye-

Bu-phthalmos ($\beta o \tilde{v}_{5}$, an ox). Ox-eye;

Cirs-ophthalmia (κιρσός, varix). A va-Re-ricose affection of the blood-vessels of the

Ex-ophthalmia ($\dot{\xi}\xi$, out). Protrusion of the globe of the eye.

Ham-ophthalmus ($a\bar{i}\mu a$, blood). Tooth-like; a designation of the second sion of blood into the chambers of the

Hydr-ophthalmia (νδωρ, water). Dropsy

of the eye ; ox-eye.

Lag-ophthalmia (λαγώς, a hare). Hare-

Psor-ophthalmia ($\psi \omega_{\rho a}$, the itch).

Scler-ophthalmia (σκληρός, hard). Inportion of the brain, otherwise called flammation of the eye, attended with hardness.

Xer-ophthalmia (ξηρός, dry). A form of ophthalmia, denoting dryness of the eye.

-OPS, -OPSIS, -OPIA, -OPTIC (ωψ, the eye, δψις, the act of seeing, δπτικός, belonging to the sight; from οπτομαι, to see). These affixes relate to the eye and vision. Hence,

Ægil-ops (al̃ ξ, alyòs, a goat). to small bones of the thumb and great eye; a sore under the inner angle of the

Æthi-ops ($al\theta\omega$, to burn). Literally, Resembling the letter sigma, as applied burnt-face; an Ethiop; and hence a

> Ambly-opia (ἀμβλὸς, dull). Dulness of

sight; incipient amaurosis.

Anchil-ops (ἄγχι, near). Literally, near Styl-oid (στολος, a pencil). Pencil-like; the eye; the incipient state of ægilops.

Aut-opsia (αὐτὸς, himself). denoting a post-mortem examination.

Chro-opsia (χρόα, colour). Chrupsia; coloration of objects; an affection of the

Dipl-opia (διπλόος, double). vision; objects seen twofold.

Dys-opia (&vs, with difficulty). culty of sight; impaired vision.

Hæmal-opia (αίμα, blood). An effusion of blood in the globe of the eye.

Hemeral-opia (ἡμέρα, the day). Day-eye; or night-blindness.

398

Hemi-opsia (ημισυ, half). Half-sight; an) appearance of half an object.

Hydr-ops (νόωρ, water). Dropsy; the

aspect or appearance of water. Metamorph-opsia (μεταμόρφωσις, trans-

formation). A distortion or confusion of objects; an affection of the sight.

Myodes-opsia (μυῖα, a fly, εἶδος, likeness). The appearance of fly-like objects before the eyes.

My-opia (μύω, to close). Close-eyedness;

or near-sightedness. Nyctal-opia (νθξ, νυκτός, night). Night-

eye; or day blindness. Oxy-opia (οξύς, sharp). Acuteness of stomach.

sight, at intervals,

Phot-opsia (φῶς, φωτὸς, light). Marmaryge, or luminous vision. Presby-opia (πρέσβυς, told). Old-eyed-Hence,

ness, or far-sightedness. -OREXIA (δρεςις, appetite, from δρέγω,

appetite or desire. Hence, An-orexia (a, privative).

petite. appetite; synonymous with bulimia.

Dys-orexia (dùs, with difficulty). praved appetite.

-PATHIA, PATHY (πάθος, affection, from $\pi \acute{a}\sigma \chi \omega$, to suffer). A te denoting an affection. Hence, A termination,

Acro-pathia (ἄκρος, extreme). Disease at an extremity of the body.

Allo-pathia (ἄλλος, another). The art of the bleating of a goat.

curing by inducing symptoms different from those of the primary disease. Anti-pathy (ἀντὶ, against). Aversion,

or dislike of an object.

A-pathy (a, privative). Absence of bronchia. feeling, or indifference towards an object.

morbus cœrnleus, or blue disease. Hetero-pathy ("ετερος, different).

art of curing, by inducing a different disease.

Homœo-pathy (ομοιος, similar). The art of curing, by inducing a similar disease. Idio-pathic ("διος, peculiar). Primary,

as opposed to symptomatic, or secondary. Leuco-pathia (λευκός, white), affection: the Albino state.

Sym-pathy ($\pi \dot{a} \theta o_{S}$, affection). feeling; corresponding feeling.

-PEPSIA (πέψις, coction, or digestion, lecting weak electricity. from $\pi i \pi \tau \omega$, to digest). A termination denoting digestion. Hence,

the absence of digestion.

Brady-pepsia (βραδύς, slow). Slowness of digestion; indigestion.

Dys-pepsia (δώς, with difficulty). Difficulty of digestion; indigestion.

-PHAGIA (φάγω, to eat). A termination of words denoting the act of eating.

Ade-phagia (adnv, abundantly). Excessive appetite; synonymous with bulimia. Dys-phagia (δύς, with difficulty). Dif-

ficulty of swallowing.

Œso-phagus (οἴω, οἴσω, to carry). The gullet, which carries the food into the

-PHOBIA (φόβος, fear, from φοβέω, to fear). A termination denoting fear.

Aëro-phobia (άὴρ, ἀέρος, air). Fear of air; a symptom of hydrophobia.

Hydro-phobia (δόωρ, water). Dread of ορέξω, to extend). A termination denoting water; a symptom of canine madness. Hygro-phobia (ὑγρὸς, moist). Dread of Want of ap-moisture; synonymous with hydrophobia.

Panto-phobia (πᾶς, παντός, all). Fear of Cyn-orexia (κύων, κυνός, a dog). Canine all things; a symptom of hydrophobia.

Photo-phobia (φῶς, φωτὸς, light). De-lerance of light; an affection of the sight.

> -PHONIA, PHONY, (φωνή, voice). termination denoting voice. Hence, A-phonia (a, privative). Loss of voice; dumbness.

> Ægo-phony (alž, alyòs, a goat). Goat-voice; a sound of the voice resembling

Bary-phonia (βαρύς, heavy). Heaviness of voice; difficulty of speaking.

Broncho-phony ($\beta \rho \delta \gamma \chi \sigma_{\varsigma}$, the windpipe). A peculiar sound of the voice over the

Dys-phonia (δὺς, with difficulty). Dif-Cyano-pathia (κύανος, blue). Cyanosis, ficulty of speaking; impaired speech.

Ischo-phonia (ισχνός, slender). Shrill-The ness of voice, hesitation, &c.

noting faultiness). Altered voice.

Oxy-phonia (όξὺς, sharp). Acuteness, or shrillness of voice. Para-phonia (παρὰ, a preposition de-

-PHORUS (φέρω, to convey). White mination denoting conveyance. Hence,

Cryo-phorus (κρύος, cold). An instru-Fellow-ment for exhibiting the degree of cold produced by evaporation,

Electro-phorus, An instrument for col-

Galacto-phorus (γάλα, γάλακτος, milk). Conveying milk; the designation of the A-pepsia (a, privative). Indigestion; ducts of the mammary glands.

Phos-phorus (φῶς, light). A substance

procured from bones, and so named from its luminous appearance in the dark.

Pyro-phorus ($π\tilde{v}ρ$, πυρὸς, fire). An artificial product, which ignites on expo- of the vagina.

sure to the air.

-PHYSIS (φύσις, nature, from φύω, to A termination denoting pro-swelling of the bulb of the eye. duction or existence. Hence,

Apo-physis $(d\pi\delta, \text{ from})$. A process of a of the globe of the eye.

bone, and a part of the same bone. Dia-physis (διὰ, through). The middle

part, or body, of the long bones.

Epi-physis (ἐπὶ, upon). A process of a of spitting. Hence,

bone attached by cartilage. Hypo-physis (ὑπὸ, under).

organ in which the infundibulum ends. Sym-physis (σῦν, together). The growing spitting of blood. together of bones, as of the ossa pubis.

-PLEGIA (πληγή, a stroke, from πλήσ- $\sigma\omega$, to strike). A termination denoting a denoting the presence of pus. Hence, stroke or attack of any part. Hence,

Hemi-plegia (ημισυς, half. paralysis of one half or one side of the

body.

Ophthalmo-plegia (δφθαλμός, the eye). Paralysis of the muscles of the eye.

Para-plegia (παρά, near). A stroke, or thorax. paralysis, in which the lower half of the body is attacked.

-PNŒA (πνοιά, breathing, from πνέω, to breathe). A termination which denotes breathing; it is connected with terms indicating some peculiarity of that function. Hence,

culty of breathing.

Ortho-pnæa ($\partial \rho \theta \partial \varsigma$, erect). An affection sion. See $Rh \alpha a$). of the breathing, in which it can only take place in the erect position.

 $\pi i \nu \omega$, to drink). A termination denoting

the act of drinking. Hence, Brachy-posia (βραχύς, short). A term

used synonymously with hydrophobia, profuse discharge of the menses. from the act of drinking little.

Cata-posis (κατὰ, down).

swallowing down meat or drink.

Dyscata-posia ($\delta \hat{v}_{S}$, with difficulty of fuse pituitous secretion. κατάποσις, the act of swallowing). A difficulty of swallowing liquids.

 PTOSIS (πτῶσις, prolapsus, from πίπτω, or πτόω, πτώσω, to fall). A prolapsus, or falling down. Hence,

Ædo-ptosis (aibora, pudenda).

lapsus of the pudenda.

Archo-ptosis (άρχος, anus). Archoptoma. Prolansus of the anus.

Blepharo-ptosis (βλέφαρον, the eyelid). A falling of the upper eyelid.

Colpo-ptosis (κόλπος, vagina). Prolapsus

Hystero ptosis (ὑστέρα, the uterus). Prolapsus of the uterus.

Ophthalmo-ptosis (ὀφθαλμός, the eye). A

Pro-ptosis (πρὸ, forward). Protrusion

-PTYSIS (πτύσις, a spitting, from πτύω, to spit). A termination denoting the act

Ana-ptysis (ἀνὰ, again, or ἄνω, upwards). The small Expectoration; a discharge from the chest. Hamo-ptysis (alua, a"uaros, blood). The

> -PYOSIS, PYEMA, &c. (πύωσις, suppuration, from πύον, pus). A termination

Arthro-pyosis ἄρθρον, a joint). An ab-A stroke or seess, or a collection of pus, in a joint. side of the Ec-pyesis ($i\kappa$, out). Humid scall, in-

eluding impetigo, porrigo, etc.

Em-pyema (èv, within). Em-pyesis. A collection of pus in the cavity of the

Hypo-pyon (ὑπὸ, under). An effusion of pus into the chamber of the aqueous humour of the eye.

-RHAGIA (δήγνυμι, from δήγω, or δάγω, to burst forth). A termination denoting a bursting forth, as of a fluid. ('The letter ρ , or \tilde{r} , is doubled in the beginning of Dys-pnæa (ôvs, with difficulty). Diffi-a word, whenever it is preceded by a vowel, either in composition or declen-Hence.

Blenno-rrhagia (βλέννα, mucus). A dis-

charge of mucus by the urethra.

Cysti-rrhagia (κυστις, a bladder). A dis--POSIA, -POSIS (πόσις, drinking, from charge of blood from the urinary bladder. Hæmo-rrhagia (alua, blood). charge, or the loss, of blood.

Meno-rrhagia (μην, μηνός, mensis).

Metro-rrhagia (μήτρα, the uterus). Ηæ-

The act of morrhage from the uterus. Phlegmo-rrhagia (φλέγμα, phlegm). Pro-

Pneumo-rrhagia (πνεύμων, the lungs). A discharge of blood from the lungs; expectoration of blood.

-RAPHE, -RAPHIA (ραφή, a suture, from βάπτω, to sew). Terminations de-Pro- noting a *suture*, or the act of making a suture. Hence,

Elytro-rrhaphia (ἔλυτρον, a sheath, the vagina). Suture of the vagina, sometimes termed episio-rrhaphia from ἐπίσιον, i scope, or object, from σκοπέω, to examine).

Entero-rrhaphia (ἔντερα, the bowels). tion. Suture of the divided edges of an intes-

Gastro-rrhaphia (γαστήρ, the stomach). of the clouds in preventing radiation. Suture of a wound of the belly, or of

some of its contents. Staphylo-rrhophia (σταφυλή, uvula). Suture of the palate.

-RHŒA (ροια, a discharge, from ρέω, to flow). A termination denoting a discharge. (The letter ρ , or r, is doubled after a vowel. See *Rhagia*). Hence,

Ameno-rrhæa (a, priv., μην, μηνός, a month). Deficient menstrual discharge.

Blenno-rrhαa (βλέννα, mucus). A dis-ment for examining minute objects. charge of mucus; gleet.

Cysti-rrhæa (κύστις, the bladder). discharge from the bladder; catarrh of the bladder.

Dia-rrhxa ($\delta\iota$ à, through).

or looseness.

μὴν, μηνός, a month). menstrual discharge.

discharge, or flow, of milk.

Gono-rrhæa (yovà, semen). charge of semen; a discharge of purulent matter.

Hæmo-rrhæa (αἶμα, blood). A discharge|in a place. of blood. Hence the term hamorrhoids, or piles, so called from their bleeding.

Hepati-rrhaa ($\tilde{\eta}\pi a\rho$, $\tilde{\eta}\pi a\tau o\varsigma$, the liver). A morbid flow of bile from the liver.

Leuco-rrhæa (λευκός, white). A white discharge per vaginam; the whites.

Oto-rrhæa (οὖς, ώτὸς, the ear). charge by the ear; the state of chronic otitis.

Spermo-rrhαα (σπέρμα, semen). A discharge of semen.

Uro-rrhæa (ούρον, urine). An excessive discharge of the urine.

-SARCA, -SARCIA (σὰρξ. σαρκός, flesh). A termination denoting flesh, or an affection of the flesh. Hence,

Ana-sarca (avà, through). the cellular substance.

Hydro-pneumo-sarca (ὕδωρ, water, πνεῦμα, air). A tumour containing water, air, and a flesh-like substance.

Hydro-sarca (ἥδωρ, water). Hyposarca; ana-sarca. Dropsy of the cellular sub-mouth; hare-lip; a congenital division of stance.

Poly-sarcia (πολύς, much). Corpulency;

bulkiness of the body.

-SCOPE, SCOPY (σκοπός, an inspector, arrangement. Hence-

A termination denoting ocular examina-Hence-

Æthrio-scope ($ai\theta\rho$ ía, serene weather). An instrument for indicating the power

Cranio-scopy (κρανίον, the skull).

inspection of the skull.

Électro-scope (ἤλεκτρον, amber. See An instrument for indi-Electricity). cating electrical excitement.

Metopo-scopy (μέτωπον, the forehead). The art of divining by inspection of the forehead.

Metro-scope (μήτρα, the uterus). An instrument for examining the os uteri.

Micro-scope (μικρός, small). An instru-

Necro-scopic (νεκρός, dead). A term A applied to post-mortem examinations. Pyro-scope (πῦρ, πυρός, fire). An instru-

ment for examining the degree of high A flux, lax, temperatures.

Stetho-scope ($\sigma \tau \tilde{\eta} \theta \sigma_{S}$, the breast). An Dysmeno-rrh α a (δv_5 , with difficulty, instrument for examining the sounds of Difficult or painful the chest.

Thermo-scope ($\theta \epsilon \rho \mu \eta$, heat). Galacti-rrhæa (γάλα, γάλακτος, milk). A strument for examining the changes of

> -STASIS ("ιστημι, to stand). A termination denoting a standing, or a position Copro-stasis (κοπρὸς, fæces). Undue re-

> tention of the faces in the intestines,

Meta-stasis (μετά, a preposition de-noting change or transference). A removal from one place to another.

-STOLE' (στολή, a mission, ... 'o send). The termination of στέλλω, to send). two words denoting the two reciprocal actions of the heart and arteries. are-

Dia-stole (δια-στέλλω, to dilate). The dilatation of the heart and arteries.

The Sy-stole (συ-στέλλω, to contract). contraction of the heart and arteries.

-STOMA (στόμα, the mouth). A ter-Dropsy of mination denoting the mouth. Hence-

Cyclo-stoma (κύκλος, a circle). lar-mouthed; an order of fishes.

Di-stoma (&;, twice). Two-mouthed;

the designation of the fluke.

Lugo-stoma (λαγώς, a hare). the lip, resembling that of a hare.

-THESIS (θέσις, a position, from τίθημι, to place). A termination denoting an

Dia-thesis (διὰ, throughout). The constitutional disposition or habit.

Syn-thesis (σῦν, together). The anatoleton. The constitution of a body from phagus. its elements, as opposed to analysis.

-TOM, -TOME, -TOMIA, -TOMY (τομ), a section, from τέμνο, to cut). A termination denoting incision. Hence—

Ana-tomy (ἀνὰ, throughout). Literally, The operation of cutting into the pha-

cutting up; dissection.

Arterio-tomy (ἀρτηρία, an artery). The tomus. opening of an artery for blood-letting.

A-tom (a, privative). A particle of mat-nesection. ter, incapable of further division.

The operation of cutting into the bron-ing an artificial pupil in the selerotica. chia, or bronchi.

Cerato-tome (κέρας, κέρατος, a horn).

knife for dividing the cornea.

Core-tomia (κόρη, the pupil). The operation, by incision, for artificial pupil; section of animals.

synonymous with iridi-tomia.

Corec-tomia (κόρη, the pupil, ἐκ-τομῆ, excision). The operation, by excision, tension, from τείνω, to stretch). A termifor artificial pupil; synonymous with nation denoting tension or tone. Henceirid-ectomia.

Cysti-tome (κύστις, the bladder). An tone or muscular power. instrument for opening the capsule of

the crystalline lens.

Cysto-tomy (κύστις, the bladder). The the extraction of a calculus.

Embryo-tomy (ἔμβρυον, an embryo).

for the purpose of delivery.

Entero-tome (ἔντερα, the intestines). An instrument for the operation of artifi- tanus of the lateral muscles. cial anus.

Gastro-tomia ($\gamma \alpha \sigma \tau \hat{\eta} \rho$, the stomach). The operation of opening the abdomen.

Hernio-tomy (hernia, from ερνος, a termination branch). The operation for strangulated Hence-

hernia.

Kore-tomia ($\kappa \delta \rho \eta$, the pupil of the eye). fective nutrition. Irido-tomia. The operation for artificial Hyper-trophia pupil, by incision. Connected with this sive nutrition, as of an organ or tissue. is kor-ectomia (ἐκ-τομὴ, excision), or iridotomia, the operation by excision.

Laryngo tomy ($\lambda \acute{a}\rho v\gamma \xi$, the larynx).

The operation of cutting into the larynx. Litho-tomy ($\lambda i\theta_{05}$, a stone). The operation of cutting a stone out of the blad-water, or ούρος, urine). A termination der.

Myo-tomy (μῦς, μυὸς, a muscle).

section of the muscles.

Nephro-tomy (νεφρός, a kidney). operation of cutting a stone out of the

Neuro-tomy (νεῦρον, a nerve). A dissection of the nerves.

Nympho-tomia (νόμφη, the nympha). The operation of removing the nymphæ.

Œsophago-tomy (οἰσοφάγσς, the gullet). mical connexion of the bones of the ske- The operation of cutting into the œso-

> Omphalo-tomia (δμφαλός, umbilicus). The separation of the umbilical cord.

Orcho-tomy ($\ddot{v}_{\rho}\chi_{\iota\varsigma}$, the testis). Castra-

rynx. The instrument is called pharyngo-

Phlebo-tomy (φλὲψ, φλεβὸς, a vein). Ve-

The opening of a vein.

Scleroticec tomia (sclerotica, and ex-Broncho tomy ($\beta \rho \delta \gamma \chi \sigma \delta$, the windpipe) $\tau \sigma \mu \eta$, excision). The operation for form-

Tracheo-tomy $(\tau \rho a \chi v_s)$, rough; hence A trachea, the wind-pipe). The operation

of cutting into the trachea.

Zoo-tomy (ζῶν, an animal. The dis-

MISS ACTON'S COOKERY.

MODERN COOKERY IN ALL ITS BRANCHES, reduced to a System of Easy Practice, for the use of Private Families. In a Series of Practical Receipts, all of which are given with the most minute exactness. By Eliza Acton. With numerous Wood-cut Illustrations. To which is added, a Table of Weights and Measures. The whole revised and prepared for American Housekeepers, by Mrs. Sarah J. Hale, from the second London edition. In one large 12mo. volume.

The publishers beg to present a few of the testimonials of the English press in favour of this work.

"Miss Eliza Acton may congratulate herself on having emposed a work of great utility, and one that is speedily finding its way to every 'dresser' in the kingdom. Her Cookery-book is unquestionably the most valuable compendium of the art that has yet been published. It strongly inculcates economical principles, and points out how good things may be concocted without that reckless extravagance which good cooks have been wont to imagine the best evidence they can give of skill in their profession."—London Morning Post.

"The arrangement adopted by Miss Acton is excellent. She has trusted nothing to others. She has proved all she has written by personal inspection and experiment. The novel feature of her book, which will greatly facilitate the labours of the kitchen, is the summary appended to each recipe of the materials which it contains, with the exact proportion of every ingredient, and the precise time required to dress the whole."—London .tlas.

"Aware of our own incompetency to pronounce upon the claims of this volume to the confidence of those most interested in its contents, we submitted it to more than one professor of the att of cookery. The report made to us is more than favourable. We are assured that Miss Acton's instructions may be safely followed; her receipts are distinguished for excellence. The dishes prepared according to Miss Acton's directions—all of which, she tells us, have been tested and approved—will give satisfaction by their delicacy, and will be found economical in price as well as delicious in flavour. With such attestations to its superior worth, there is no doubt that the volume will be purchased and consulted by the domestic authorities of every family in which good cookery, combined with raid economy, is an object of interest."—Globs.

"We have subjected this hook to the severe test of practice, and we readily concede to it the merit of being a most useful auxiliary to the presiding genius of the cuisine. The instructions it gives in all that relates to culinary affairs are comprehensive, judicious, and completely divested of old-fashioned twaddle. It contains, besides, some novel features, calculated to facilitate the labours of cookery; the principal of these is the summary appended to each receipt of the exact quantities of the ingredients it contains, and the precise time required to dress the dish. To the practical woman who seeks to combine comfort with economy in the direction of her household concerns, this book will prove an invaluable treasure."—Sunday Times.

"We cannot, therefore, too warmly recommend to the notice of our junior brethren this compilation of Eliza Acton's, which will prove as useful to young Mrs. and her cook in the kitchen, as 'Thomson's Dispensatory or Conspectus to the young doctor in the library."—Medico-Chirurgical Review.

"Mistress Acton writes well, to the point, and like a woman of sterling sense; her preface ought to be printed on a broadside, and taught to all the young ladies at all the boarding-schools, and all the day-schools, whether boarding or not, in England.

"The whole of Miss Acton's receipts, with a few trifling exceptions, which are scrupulously specified, 'are confined to such as may be perfectly depended on from having been proved beneath our own roof, and under our personal inspection.' We add, moreover, that the receipts are all reasonable, and never in any instance extravagant. They do not bid us sacrifice ten pounds of excellent meat that we may get a couple of quarts of gravy from it; nor do they deal with butter and eggs as if they cost nothing. Miss Acton's book is a good book in every way; there is right-mindedness in every page of it, as well as thorough knowledge of the subject she handles."—London Medical Gazette.

WHITE'S UNIVERSAL HISTORY.

LEA AND BLANCHARD

HAVE LATELY PUBLISHED.

ELEMENTS OF UNIVERSAL HISTORY,

ON A NEW AND SYSTEMATIC PLAN:

FROM

THE EARLIEST TIMES TO THE TREATY OF VIENNA;

TO WHICH IS ADDED.

A SUMMARY OF THE LEADING EVENTS SINCE THAT PERIOD.

FOR THE

USE OF SCHOOLS AND PRIVATE STUDENTS.

BY H. WHITE, B.A., TRINITY COLLEGE, CAMERIDGE;

WITH ADDITIONS AND QUESTIONS,

BY JOHN S. HART, A.M.,

PRINCIPAL OF THE PHILADELPHIA HIGH SCHOOL, AND PROFESSOR OF MORAL AND MENTAL SCIENCE, ETC., ETC.

In one Volume, large Duodecimo, neatly bound in Maroon.

The Publishers, in presenting "White's Universal History" to the public, believe that it is calculated to fill a deficiency, long existing in school-books, of a good and an accurate condensed manual of the History of the World, fitted as an essentially appropriate work for schools. Some of those now in use have been long before the public, and since their appearance, many interesting investigations have been made, and important facts developed; some are meagre in their details, and the narrations given are proved by later researches to be incorrect; while none embrace a broad and philosophical view of the gatherings of late historians.

It is believed that the present volume is capable of fulfilling these indications. The Author, who has had great experience as a teacher of history, has spent several years in the composition of the work; and every effort has been made to insure its accuracy during its passage through the press. In his Preface, he remarks that "he has consulted the best works in the English language, and acknowledges his great obligations to several of the more recent French and German writers. The references introduced in the body of the work, serve to indicate the main sources from which his information has been derived; and it is hoped they will also be serviceable to the student, by directing the course of his further researches, as well as inducing him to continue them in a more extended field."

THE EXPLORING EXPEDITION.

LEA AND BLANCHARD,

PHILADELPHIA:

HAVE JUST PUBLISHED,

THE NARRATIVE OF THE

UNITED STATES

EXPLORING EXPEDITION,

DURING THE YEARS

1838, 1839, 1840, 1841, and 1842.

BY CHARLES WILKES, U.S.N.

COMMANDER OF THE EXPEDITION, ETC. ETC.

IN FIVE MAGNIFICENT LARGE IMPERIAL OCTAVO VOLUMES:

WITH AN ATLAS OF LARGE AND EXTENDED MAPS.

Price Twenty-five Dollars to Subscribers, done up in beautiful Extra Cloth Binding.

This truly great and national work is issued in a style of superior magnificence and beauty, containing

SIXTY-FOUR LARGE AND FINISHED LINE ENGRAVINGS,

EMBRACING SCENERY, PORTRAITS, MANNERS, CUSTOMS, ETC. ETC.

FORTY-SEVEN EXOUISITE STEEL VIGNETTES.

WORKED AMONG THE LETTER-PRESS; ABOUT

TWO HUNDRED AND FIFTY FINELY-EXECUTED WOOD-CUT ILLUSTRATIONS

FOURTEEN LARGE AND SMALL MAPS AND CHARTS:

AND NEARLY

TWENTY-SIX HUNDRED PAGES OF LETTER-TRESS.

No pains or expense have been spared to render these volumes worthy of the theme they illustrate, and to make them equal, if not superior, to anything of the kind ever produced in any country. The whole work may be resarded as a truly national one. Nothing has been used in its preparation that is not STRICTLY AMERICAN, and the design of the Author and Publishers has been to produce a book worthy of the country.

A specimen of the Plates, Cuts, and general execution of the work can be seen, and the names of the persons wanting copies may be left with the Publishers, or any of the principal Booksellers throughout the Union.

** The publishers have for sale for Sixty Dollars, in cloth, a few copies of the edition in large Quarto, printed for distribution by the order of Congress. Only one hundred and twenty-five of the two hundred and fifty printed have been offered to the public.

PUBLISHED BY LEA AND BLANCHARD.

SIBORNE'S WATERLOO CAMPAIGNS: WITH MAPS AND PLANS.

History of the War in France and Belgium in 1815; containing minute details of the Battles of Quatre-Bras, Ligay, Wavre, and Waterloo. By Captain W. Siborne. In one octavo volume, with Maps and Plaus of Battles, &c., viz:

- 1. Part of Belgium, indicating the distribution of the armies on commencing hostilities.
- 2. Field of Quatre-Bras, at 3 o'clock, P. M.
- 3. Field of Quatre-Bras, at 7 o'clock, P. M.
- 4. Field of Ligny, at a quarter past 2 o'clock, P. M.
- 5. Field of Ligny, at half past 3 o'clock, P. M.
- 6. Field of Waterloo, at a quarter past 11 o'clock, A. M.
- Field of Waterloo, at a quarter before 8 o'clock, P. M.
- 8. Field of Waterloo, at 5 minutes past 8 o'clock, P. M 9. Field of Wavre, at 4 o'clock, P. M., 18th June.
- 10. Field of Wavre, at 4 o'clock, A. M., 19th June.
- 11. Part of France, on which is shown the advance of the Allied Armies into the Kingdom.

"This officer's acquirements in a scientific branch of his profession, of which he has given evidence in his models of the ground of Waterloo, entitle his views of that conflict to much higher consideration than those of Mr. Allison. With great respect for his zeal and honesty, and admitting that professional knowledge has saved him from the presumptuous blunders which disfigure Mr. Allison's chapters on Waterloo."-Quarterly Review for June, 1845.

RUSH'S COURT OF LONDON.

Memoranda of a Residence at the Court of London, comprising Incidents Official and Personal, from 1819 to 1825; including Negotiations on the Oregon Question, and other Unsettled Relations between the United States and Great Britain; by Richard Rusu, Envoy Extraordinary and Minister Plenipotentiary from the United States from 1817 to 1825. In one large and heautiful octavo volume, extra cloth.

In 1833, twelve years ago, the first series of these entertaining and interesting memoranda appeared; and coming from such a source, were so favorably received that we have long wondered at the abstinence which had prevented their being more rapidly followed out. Both for their pofitical and social matter, they belong to a class of reading which it is very desirable to cultivate. In the complexion of his mind the author is so moderate and just that his international statements are worthy of perfect credit; while the position he occupied gave him such apportunities of mixing with the best informed portions of society, that his descriptions and anecdotes of them are of a most agreeable kind .- London Laterary Gazette.

MACKINTOSH'S PHILOSOPHY.

Dissertation on the Progress of Ethical Philosophy, by Sir James Mackintosh; with a Preface, by the REV. WILLIAM WHEWELL, M.A. From the second Edinburgh edition; in one neat octavo volume.

- HUMAN HEALTH: or the Influence of Atmosphere and Locality, Change of Air and Climate Seasons, Food, Clothing, Bathing, Mineral Springs, Exercise, Sleep, Corporcal and Mental Pursuits, &c. &c., on Healthy Men, constituting Elements of Hygiene. By Robley Dunglison, M. D., &c. &c. In one octave volume.
- EVERY MAN HIS OWN FARRIER: containing the Causes, Symptoms, and Methods of Cure of the Diseases of Horses, by Francis Clater and John Clater. From the 28th London edition. By J. S. Skinner; in one 12mo, volume.
- THE DOG AND THE SPORTSMAN: embracing the Uses. Breeding, Training, Diseases, &c. &c., of Dogs. An account of the Different Kinds of Game, with their Habits; also, Hints to Shooters, with various useful Recipes; by J. S. Skinner. In one neat 12mo, volume, with Engravings.
- REMARKS ON THE INFLUENCE OF MENTAL EXCITEMENT, and Mental Cultivation upon Health: by A. Brigham, M.D. Third edition; one volume, 18mo.
- RELIGIO MEDICI, AND ITS SEQUEL, CHRISTIAN MORALS: by Sir Thomas Browne, Kt., with Resemblant Passages from Cowper's Task. In one neat 12mo. volume.

BOOKS PUBLISHED BY LEA AND BLANCHARD, PHILADELPHIA.

THE LIBRARY OF STANDARD LITERATURE.

Under this title L. & B. are publishing a number of valuable works, which should find a place in every library. Some of them have been long out of print, and are no longer accessible; while others have been but recently issued, and are now published here for the first time. They are printed with clear and readable type, on good white paper, and are sold at a price to put them within the reach of all.

Among them will be found the following valuable works; to which others will, from time to time, be added.

NIEBUHR'S ROME.

The History of Rome, by B. G. Niebuhr; complete in two large octave volumes, done up in extra cloth; or five parts, paper, price \$1.00 each.

The last three parts of this valuable book have never before been published in this country, having only lately been printed in Germany, and translated in England. The two last of these comprise Professor Niebuhr's Lectures on the latter part of Roman History, so long lost to the world.

"It is an unexpected surprise and pleasure to the admirers of Niebuhr—that is, to all earnest students of ancient history—to recover, as from the grave, the lectures before us."—*Eclectic Review.*"The world has now in Niebuhr an imperishable model."—*Edinburgh Review, Jan.* 1844.

MILLS' CRUSADES.

The History of the Crusades, for the Recovery and Possession of the Holy Land, by Charles Mills. In one part, paper, price \$1.00.

MILLS' CHIVALRY.

The History of Chivalry; or, Knighthood and its Times, by Charles Mills.

In one part, paper, price \$1.00.

Also, the two works, Crusades and Chivalry, in one volume, extra cloth.

WALPOLE'S NEW LETTERS.

The Letters of Horace Walpole, Earl of Orford, to Sir Horace Mann, from 1760 to 1785. Now first published from the original MSS. In four parts, paper, price \$1.00 each; or two handsome volumes, extra cloth.

In these volumes, the anecdotes and comments on the characters of the day are of so unreserved a nature, that Welpole took measures to prevent their appearance for a number of years, until the wit of the dead should no longer wound the feelings of the living.

WRAXALL'S HISTORICAL MEMOIRS.

Historical Memoirs of my own Times, by Sir N. W. Wraxall. In two parts, paper, or one neat volume, extra cloth.

This is the work for which, in consequence of too truthful a portraiture of Catherine II, the author was imprisoned and fined. Taught by this experience, his succeeding memoirs he suppressed until after his death.

WRAXALL'S POSTHUMOUS MEMOIRS.

Posthumous Memoirs of his own Times. by Sir N. W. Wraxall. In two parts, paper, at seventy-five cents each; or one volume, extra cloth.

This work contains much secret and amusing anecdote of the prominent personages of the day, which rendered its posthumous publication necessary.

STANDARD LIBRARY CONTINUED.

PROFESSOR RANKE'S HISTORICAL WORKS. RANKE'S POPES.

History of the Popes, their Church and State, during the Sixteenth and Seventeenth Centuries, by Leopold Ranke. Translated from the last edition of the German, by Walter K. Kelly, Esq. In two parts, paper, at \$1.00 each; or one large volume, extra cloth.

This edition has translations of all the Notes and Appendices.

RANKE'S TURKISH AND SPANISH EMPIRES.

The Turkish and Spanish Empires, in the Sixteenth Century, and beginning of the Seventeenth, by Leopold Ranke. Translated from the last edition of the German, by Walter K. Kelly, Esq. Complete in one part, paper; price 75 cents "Sovereigns and Nations of Southern Europe, in the Sixteenth and Seventeeath Centuries," is the title common to Ranke's four volumes, of which only the three last constitute the well-known "History of the Popes." The first is here produced as a separate work, with two titles, that it may be either bound up with the other, or used separately.

RANKE'S REFORMATION.

History of the Reformation in Germany; by Professor Leopold Ranke. Part First and Second, now ready, price 25 cents each. Translated from the second edition, by Sarah Austin. To be completed in about five parts, each part containing one volume of the London edition.
This will conclude the valuable series of Professor Ranke's Historical works

BROWNING'S HUGUENOTS.

A History of the Huguenots, a new edition, continued to the present time, by W. S. Browning.

The object of this work is to give a clear detail of the troubles generally called the Religious Wars of France, presenting the whole connectedly, and divested of all theological discussion.

WALPOLE'S GEORGE THE THIRD.

Memoirs of the Reign of King George the Third, by Horacc Walpole. Now first published from the original MS. Edited, with Notes, by Sir Denis Le Marchant.

These Memoirs comprise the first twelve years of the reign of George III.; and recommend themselves especially to the reader in this country, as containing an account of the early troubles with America. They form a sequel to the "Memoirs of George the Second," by the same author. L. & B. have still on hand a few copies of Walpole's Early Letters, in four large octavo volumes, including his "Memoirs of George II.;" also, copies of his suppressed Letters to Sir Horace Mann, in two octavo volumes, completing the series of his Historical Works.

THE GREAT NATIONAL WORK AT TWO DOLLARS A VOLUME, IN CLOTH.

LEA & BLANCHARD ARE NOW ISSUING

CAPTAIN WILKES' NARRATIVE OF THE

UNITED STATES EXPLORING EXPEDITION.

IN FIVE OCTAVO VOLUMES.

Containing nearly Three Hundred Wood-cuts, Eleven Maps, and nearly Twenty-six Hundred Pages of Letter-press.

The text and type of this Edition are precisely the same as that in imperial octavo, tha difference consisting in the size and quality of the paper; the omission of the sixty-four steel plates; the substitution of wood-cuts for the forty-seven vignettes; and the use of eleven of the fourteen maps, four of which are on a reduced scale. The whole work will be in five octavo volumes, elegantly done up in cloth, for the very low price of Ten Dollars.
